[00:00:16] We love... Lay the ground, now lift your eyes.

[00:00:22] I am now.

[00:00:24] Hands up, hearts open, this room is alive.

[00:00:33] Come on, mission, watch the

[00:00:38] Welcome to Earth!

[00:01:18] voices.

[00:01:19] Fresh eyes on the

[00:01:25] King's... Today we learned together.

[00:01:30] Just go!

[00:01:32] Thumbs up high.

[00:01:33] Open this room!

[00:01:45] Welcome to Earth!

[00:02:17] Then take it again.

[00:02:19] From here to the top.

[00:02:22] We win all over the One beat, one sound, outskill on the line, and we're all in the

[00:03:41] Welcome in!

[00:03:44] Come on through!

[00:03:48] Got a wild new way!

[00:03:52] Waiting for you

[00:03:57] Screens globally.

[00:03:58] But this room's the spark. Curious mind sliding up Dark!

[00:04:04] Questions ready. Coffee in your head.

[00:04:08] Crazy ideas into things.

[00:04:14] Welcome to the world!

[00:04:17] Shop!

[00:04:18] Let your brain switch on!

[00:04:22] remade!

[00:04:28] Same time!

[00:04:29] Welcome to the Shop!

[00:04:36] We learned today, we decided!

[00:04:38] You plus...

[00:05:02] Season...

[00:05:07] It's news!

[00:05:09] What's the world

[00:05:18] Welcome to the wander Stop turning!

[00:05:41] We decide...

[00:05:49] If you're nervous That's wonky.

[00:05:56] Future bright altogether.

[00:06:00] Every voice in the

[00:06:08] Welcome to the world!

[00:06:14] Shaw!

[00:06:35] That's a grill!

[00:06:59] We lit the spark that starts the fire. Hearts full of desire through the night, we've found our way Together we run

[00:07:14] Every day!

[00:07:16] Come so far, it's swamp!

[00:07:20] The shy!

[00:07:21] Stop!

[00:07:23] Now, as we gave up!

[00:07:26] Holy Rock!

[00:07:28] before!

[00:07:41] Together!

[00:07:44] We've built a world from lines of code, turn ideas to life. The seeds we sowed. Generative minds, a boundless stream.

[00:07:58] A dream!

[00:08:02] So far!

[00:08:05] Shut it!

[00:08:08] 8 hours we gave!

[00:08:28] I'll never fall!

[00:08:30] Every challenge, every test.

[00:08:34] We stood as one, we gave our best. Our voices

[00:08:38] Go strong and true, the future is as well sing!

[00:08:50] Still, we've come so far!

[00:08:52] Each one!

[00:08:53] A shining star.

[00:08:56] 15 hours we gave our own!

[00:09:01] Guys!

[00:09:02] The fall!

[00:09:30] Gathering!

[00:09:32] The fall!

[00:09:36] Come in, come close You made it here today. From every corner of the world You found your way

[00:09:51] We learned the road!

[00:09:55] Now lift your arms!

[00:10:02] Boom is on... Give one team... Mission, watch the future arise.

[00:10:08] Welcome to it!

[00:10:15] We stopped!

[00:10:41] New ideas, new voices.

[00:10:45] What kind of team.

[00:10:48] Fresh eyes on the frog.

[00:10:53] in the stream.

[00:10:56] You came to bed.

[00:11:04] Watch your score!

[00:11:13] This room is alive!

[00:11:15] One team, one mission, what's the future?

[00:11:20] Welcome to Earth!

[00:11:29] Faces!

[00:11:53] And take it again.

[00:11:54] From here to the top.

[00:12:00] One beat, one sound, I'll skill.

[00:12:13] Welcome to...

[00:12:20] We're starving!

[00:12:27] Welcome to...

[00:12:50] We're just getting

[00:12:54] Oh, slow down!

[00:13:08] All right, everyone, very warm welcome to Day 1 of the Generative AI Mastermind here at Outskill. I'm super excited to get all of us started, but as more people are joining in, and as people are filling up the poll, let me know on the chat if you're able to hear me well and see me well. Drop in a yes on the chat if my voice is audible, if you're able to hear me well.

[00:13:33] Am I loud and clear?

[00:13:38] Perfect!

[00:13:43] Wonderful, wonderful. I see most people dropping in a yes at this point of time. This is absolutely amazing. In case my voice is breaking for anyone, or you're not able to hear me well, please

[00:13:56] Wear headphones or earphones, and please also make sure that you're joining the entire mastermind with a laptop or a desktop, so that you have a bigger screen, and you can see us and participate very, very well. People who are dropping in external links on the chat, like Amlesh, please refrain from doing that, our team will be putting you out of the entire session, and others.

[00:14:18] Please do not click on any external links at all.

[00:14:22] I'm just going to go ahead and pause the chat very, very quickly, so that our devices don't hang up. There are thousands of people who are joining in, and this is absolutely amazing. People who are asking whether we can do this in Hindi.

[00:14:36] No, we will be sticking to English, because I'm sure we have people joining in from all over the world. But with that being said, I think, as everybody is joining in, it's time for us to get started, and as we get started.

[00:14:50] I would like to give all of you a quick overview of what we have been trying to do at Outskill before we jump into the very first session. But once again, welcome to the 2-Day Generative AI Mastermind. We are just getting started, and if you have just joined in, please go ahead and answer the poll that we have gone ahead and launched.

[00:15:11] Just to give you all a quick teaser about what Outskill is, the platform that is hosting this Genitive AI Mastermind over this weekend for all of us.

[00:15:21] Well, we are today the world's largest generative AI education platforms out there, and our vision is to bring generative AI education to over 100 million plus people globally by 2028, and truly democratize generative AI education and make it accessible for people from all over the world. As a result of these efforts.

[00:15:44] all of you are getting a chance to attend the same mastermind that we have been conducting, the most updated one that we have launched. You are getting an opportunity to attend it because we want to help build the next generation workforce.

[00:15:59] And this two-day AI training program is probably the most powerful 2-day, or most powerful AI training programs that you might have ever taken, because the same training, or previous versions of this Generative AI mastermind has been attended by more than 11 million plus people already.

[00:16:18] from all across the world. Like, literally, we have had participants from more than 173 plus countries, more than 100 million plus hours of learning.

[00:16:28] has happened inside of Outskill, with an average rating of 4.8 on a scale of 5. Now, as people are joining in, I would want all of you to drop in on the chat. Where is it that you are joining in from today?

[00:16:41] Which place are you joining in from? Sharath, I hope my voice is clear for you.

[00:16:47] Yeah, it's clear for most people. Yeah, I see Hyderabad, Kolkata, Nagpur, Andhra Pradesh, London, UK, wonderful. Australia might be quite late in the evening for you.

[00:17:01] if people are joining in from Australia, Jammu, Kashmir, love it.

[00:17:06] Orisao.

[00:17:07] Vishak Patnam, my birthplace, love it. Boston, U.S.

[00:17:13] Antarctica says someone, incredible. We literally have people joining in from all over the world at this point of time. This is...

[00:17:22] absolutely incredible. Amlesh.

[00:17:26] Our team will be putting you out. Please refrain from clicking on any of the links that are coming in on the chat. But just take a look at the chat, everyone. I'll actually put it on host and panelists right now, because I see few people dropping in some external links on the chat, but drop in a heart if

[00:17:43] What you see on the chat at this point of time is absolutely blowing your mind. You are in an AI training that is being attended at the same time from people from all over the world at this point of time. And there was a form that we had gone ahead and shared earlier through some of our communications, and a lot of you had gone ahead and filled up that form, letting us know

[00:18:06] that you are a beginner in the generative AI space as of today, and you would like to learn tools, you would like to learn workflows, you would like to learn automations, you would like to hear more about AI agents. We are going to tap into all of that

[00:18:21] But since there are thousands of people on this call, I would want all of us to stick to some guidelines, and I'm going to share those guidelines very, very soon with everyone. I'm going to take about 5 to 10 minutes for our actual learning to get started, so that I can set context

[00:18:38] for everybody before we dive deep into it. Now, if you're wondering who I am, and why am I taking the responsibility of setting this context, well, I'm your host.

[00:18:48] for today and tomorrow, my name is Fanikrishna, and since I see friends from other countries as well, you can call me PK. I'm the Associate Director of Growth and one of the founding members here at Outskill. I've worn multiple hats ever since we started Outskill, but from the core of my heart, I've always been a teacher.

[00:19:08] And I've always worked towards trying to bring the best versions of people by helping them upskill.

[00:19:15] Now, I've done a... I've done quite a lot of teaching in my entire life, started from children from rural parts of the country, all the way up to helping adults upskill themselves, and you can go ahead and check out my profile on LinkedIn or on Instagram to know more about some of the things that I have been able to do myself. But my purpose here is to help you connect the dots

[00:19:39] between multiple sessions that you will be attending. I'm not going to be teaching directly, but I'm going to be jumping in multiple times to ensure that you are learning all throughout, as you will be meeting multiple mentors that we have brought on board. And today, you're going to be meeting two incredible people.

[00:19:58] that I'm going to be introducing all of you to.

[00:20:01] It's... the whole mastermind is going to get started with Raghuvir, who is currently an AI strategy consultant. Drop in a heart, all of the working professionals, about 35-40% of us here are working professionals.

[00:20:16] Working professionals today have an incredible opportunity of becoming consultants, and Raghavir has done exactly that. He has worked with companies like Uber and Nasdaily, but today, he's

[00:20:28] an AI consultant, and he has been able to go ahead and build some incredible companies and startups because of generative AI. As he takes over, he will talk a little bit about it, and he's going to be teaching all of us

[00:20:42] or probably taking the most toughest session of the mastermind over the next 2 days. He's going to be teaching us the foundations, and when I give you the intro of that, I will tell you why I call it the toughest. And then...

[00:20:55] Today, we also have Web Obscency coming in.

[00:20:59] How many of you have already heard WebHub's S&T in some podcasts online? I see people here coming in from Rajamani's podcast with WebHub. I also see people voting on the polls stating that you have gone ahead and seen WebHub's podcast with Raw Talks with Vamsi.

[00:21:18] Drop in a me if you have already heard from WebHub before.

[00:21:22] he's going to be coming in towards the afternoon today from 1.45pm IST, and he's going to be meeting everybody live today to teach all of us how we could use Gen AI exactly like him. I love the energy that everybody is dropping in on the chat and through the reactions.

[00:21:40] Having said all of this, I also want to tell all of you that you have to completely attend this live. We will not be able to provide recordings of any of the sessions that happen, purely due to technical reasons. This is a long training, unlike any other workshop that you probably would have ever taken in the virtual world that we are all living in, but this time, we will not be able to provide the recordings.

[00:22:04] Hence, Have a notebook with you.

[00:22:07] Take down notes. I'm going to be helping you with a lot of resources that I will keep dropping in towards the end of every session, and yes, you will be getting a certificate upon completing the whole mastermind as well. However, recordings will not be provided, so ensure that you're sticking around throughout the whole session. Now, in case you are not able to attend completely today and tomorrow.

[00:22:31] tomorrow, and you need to write to our support team, we are always available at hi at the rateoutskill.com. You can go ahead, drop an email, and our team will push you into the next batch. But I hope all of you are clear about the certificate, and that you will not be getting the recordings

[00:22:46] Give me a thumbs up if you are clear about the certificate and the recordings part of it, as these are the questions that I keep seeing people dropping in on the chat, and I would want all of you to be clear about it before we move forward.

[00:23:02] Yes, All right. All right. Now.

[00:23:07] As we are all doing this on Zoom, quick instructions about Zoom as well. We have thousands of people participating this time, so we will have to keep controlling the chat box. It might be turned off sometimes, it might be turned on sometimes, but we will take your questions after every session gets over. This

[00:23:26] helps us focus on the flow of the session, and also keep the whole environment controlled, and help everybody feel inclusive. Now, how do you communicate? Well, just like how all of you are doing right now, which is through the reactions. Now, there are some people who could get disturbed because of the reactions as well.

[00:23:46] In case you are getting disturbed because of the reactions, you can control the reactions on your screen. And if, for whatever reason, you're not able to follow my accent or our mentor's accent as they take over, you also have captions that you can go ahead and enable, which will help you

[00:24:06] read out everything that we are going ahead and speaking. This is something that I quickly wanted to tell you about Zoom, because you're going to be spending the next 16 hours on this application, trying to learn as much as possible about generative AI. Now, other thing that I quickly want to tell all of you is that how many of you have never written a single line of code in your entire life? Give me a heart.

[00:24:30] If you have never written a single line of code in your entire life. You are a non-developer, a non-techy, just like me.

[00:24:40] AI is changing the world for us, because

[00:24:44] Without knowing how to write code ourselves.

[00:24:47] using natural language, or using English, we are able to get a lot of things done, and we are going to be teaching you all of that in this

[00:24:56] two-day mastermind as well. So, don't worry if you are somebody who is an absolute beginner to using computers as well. You don't need to know how to write a single line of code to be able to use AI. And what you're going to be seeing over the next two days, if you are a business owner, a startup founder, or a solopreneur, or a freelancer, somebody who runs their own business.

[00:25:21] Without having a team.

[00:25:23] You are going to be learning how you can implement AI in your business and unlock 10x growth, and add an unfair advantage to your overall business. And if you are a working professional or a student.

[00:25:35] Of course.

[00:25:37] Lot of companies today are laying people off, and we are going to get started by talking about why are companies really laying people off, and what is truly changing. But all the working professionals and students today should start thinking about becoming a solopreneur, a freelancer, or a business owner as well. The future, 5 years down the line, or probably 8 years down the line.

[00:26:00] Could be all about gig economy, which is all of us

[00:26:04] earning for the work that we do through freelancing on hourly rates. It could be about that. That is what everybody around the world is predicting at this point of time, because of how generative AI is taking shape. Hence.

[00:26:18] Over the next two days, our focus is also going to be on putting you into that thought process of how is it that you can start something of your own. Now, before I welcome Raghvir in, I know that all of you are excited to get started, and all of you are excited to meet Raghvir as well. But before that, can I take

[00:26:38] 5 to 10 more minutes to help all of us understand how generative AI, or rather, agentic AI, is transforming the way we work. Because before we start zooming in.

[00:26:49] as your host, I believe zooming out is going to help all of us, because all of us

[00:26:55] are from different walks of life over here. We have... some of us have more than 10 years of work experience, as I can see on the poll. In fact, let me go ahead and share the poll results as well with all of you, so that you get a sense of the kind of people on this call at this point of time. We have

[00:27:12] Founders and entrepreneurs, salaried working professionals, a lot of students and freelancers, people from tech and software engineering, people from data marketing.

[00:27:22] People who have 10 plus years of work experience, look at the wide range.

[00:27:27] of... people that we have on this call itself. Now, can I take 5 to 10 minutes

[00:27:34] to zoom out first, help all of us come to the same page, help you understand how we have structured today and tomorrow, and then help you get started with the first session. Drop in a yes if you're giving me your next 8 to 10 minutes.

[00:27:49] Quick yes.

[00:27:52] as I take a sip of my Red Bull, since some of you are asking me whether I'm an AI agent, AI agents, at least at this point of time, don't drink Red Bulls. But.

[00:28:03] As we see on the poll, thank you so much for giving your next 8 to 10 minutes for me to set context. I'll do this peacefully so that all of us come to the same page, right?

[00:28:13] Like we saw.

[00:28:14] multiple kinds of people are on this call at this point of time. We have entrepreneurs, working professionals, and also hustlers. Now, the way I have prepared this is, I'm going to be speaking to each one of you

[00:28:27] separately, in buckets. And I'm going to get started with the working professionals, because this is going to relate to the larger bucket of entrepreneurs as well.

[00:28:37] we have been hearing about companies laying people off all across the world, right? And I am going to break down why that is exactly happening, so that the fear goes away.

[00:28:48] Nobody today has to be fearful of their jobs. If somebody is telling you that AI is going to take your jobs away, they are wrong. AI cannot take your job away. But what is truly happening?

[00:29:02] Well, this is what is truly happening. Until today, all of us focused on becoming specialists. We all focused on going deep into one specific domain of our own interest. Think about yourself.

[00:29:15] What is that specific domain that you went deep into over the last few years, or last many years?

[00:29:22] If you... I mean, if you think about it, it would be marketing for a few people. It could be software development, or tech for a few people. For a few of us, it could be business management and operations, which I have gone deep into.

[00:29:35] It could be accounting and finance. All of us learned how to go ahead and pick our domain of choice and go extremely deep into it, and what has happened all of these decades is that

[00:29:48] the more years of experience we gained in our own domain, the higher would be our salary. However.

[00:29:56] Now the technology is completely changing, as all of us know, and this technology of generative AI is very, very good at doing exactly the specialist jobs.

[00:30:08] So, all of these specialist roles that we have all gone deep into.

[00:30:13] These are coming to be at risk today because of AI. And because of the same reason, we see companies

[00:30:22] laying people off, and the worrisome part is, it's not even about the layoffs, but it's about companies not hiring as much as they used to earlier. So a lot of hiring also has come to a pause completely.

[00:30:38] Right? I'm just gonna put a pause on the reactions as well, because I want you to listen to this very, very carefully, as this is going to set tone for everything that you're going to be seeing over the next two days.

[00:30:50] Now, while all of this...

[00:30:53] is happening, right? And companies like Microsoft are putting out surveys and research articles as well, stating that most of the common roles that all of us have been doing, like sales, customer support, anything that has to... anything that has to do with computers or digital devices can be taken over, essentially, by AI agents. While all of this is happening.

[00:31:16] How do we prepare ourselves

[00:31:18] for the future. Well, before that, we need to understand something called as AI agents.

[00:31:25] What are AI agents? Because it's not ChatGPT, or it's not Claude, or it's not your regular LLMs that are going to really help you in your professional work. While they can help you in many ways.

[00:31:37] AI agents are the systems that people are building today that have higher capability than LLMs itself.

[00:31:46] And it is these AI agents that all of us should learn how to operate and how to build as well. Now, we are not going to directly jump into building AI agents, because there is a lot of foundational ground that we will have to clear. However, what are these AI agents? Well.

[00:32:02] To put it in very simple terms for all of us to understand as we get started itself, these are nothing but systems built using large language models. So, we have all used ChatGPT. ChatGPT runs on some large language models, and you're going to be learning about these large language models as well. Now, to these large language models, when you go ahead and assign tools.

[00:32:23] That we use on a daily basis.

[00:32:26] The large language model then has the ability to use the tool on your behalf as well.

[00:32:32] And because the large language model becomes the brain, it has the ability to think. So, imagine how a human being performs certain tasks.

[00:32:43] In the similar way, you can today train the computer to use the same tools that human beings use.

[00:32:49] to go ahead and perform tasks. Now, this is a very bare-bone definition of what AI agents could do once you go ahead and build them, but as we move forward today and tomorrow, we are going to understand what these LLMs are, what these tools are, how can we combine both of them, and how can we let them do things for us. But did you all understand what AI agents are, and how they are slightly

[00:33:14] different from ChatGPT and Claude and Gemini. Give me a thumbs up if you're with me so far, and if I'm going at the pace you would want me to go at.

[00:33:25] Give me a thumbs up, perfect.

[00:33:28] Now, the beauty about these AI agents is that they can work at superhuman speed.

[00:33:35] And they can also work 24-7 for almost free. Why do I say almost free? Because the cost of running, there is still a cost attached to it, but the cost of running these AI agents is way lesser than the cost of human salaries.

[00:33:50] Now... While people are building these AI agents and companies are wanting them.

[00:33:57] The rise of new jobs is also happening parallelly, because with every technology booming, we have seen this in the past as well, when the internet technology boomed.

[00:34:08] A lot of new jobs got created. And the same is happening with generative AI technology as well. There are new jobs coming up. People are today calling it multiple different things.

[00:34:19] But one bucket of people or careers that are growing today is the bucket of AI generalists, or AI orchestrators, or AI operators.

[00:34:31] How many of you have already heard the term AI generalist?

[00:34:35] by now. Drop in yes-no on the chat if you have already heard the term AI generalist, or if you have already heard the term AI orchestrator or AI operator.

[00:34:46] Lot of you are saying no. Lot of you are mentioning that you have not heard this term, which is quite surprising, because people like Vinod Khosla, one of the early investors in OpenAI, people like Elon Musk, people like Sam Altman are going ahead and talking about AI generalists today, people who can essentially solve problems using AI. While these models

[00:35:09] AI models And tools are getting so powerful.

[00:35:14] It is very important for all of us to become great AI orchestrators, or be able to use all of these AI models in the best possible way.

[00:35:23] understand the abilities of multiple different models, know which model to use where, and then be able to solve problems with these AI models. And when you are able to do that, that is when you will not be limited to solving problems in your own domain.

[00:35:39] Until today, we didn't have this scope. Hence, we tried to go deep into our own domain. But now, with AI, you can literally solve problems across multiple domains, and you might have tried to do that with ChatGPT already.

[00:35:55] You know, very simple example, right? I'm sure all of us here in the room would have gone to ChatGPT to ask some question about our own health. What is that? That is you trying to understand something beyond of your own domain.

[00:36:12] And the deeper you go into generative AI, the better will you be able to solve problems across multiple domains. And that broad thinking, that is what AI generalists essentially would end up having.

[00:36:25] And these AI generalists could thrive just because of the sheer ability to solve as many problems as possible, right? Now, you might be like, how is this going to make sense if I have over 15 years of experience as of today? Well.

[00:36:42] People who have... I see about 40% of the people here have more than 10 years of work experience.

[00:36:49] All of the people who have more than 10 years of work experience will be the ones managing the next generation of workforce. And the next generation of workforce will be the people who would be using AI. So you should be someone who is building the AI strategy, you should be understanding the current processes.

[00:37:08] and then transforming them into AI-driven processes. Today, when I talk to people from multiple companies who invite us to go ahead and train their entire teams in generative AI, the biggest struggle that they have is not knowing how to deploy AI systems in their own companies because of the traditional systems that they are following.

[00:37:30] Now, in the entire company, who knows these traditional systems the best?

[00:37:34] People who have more than 10 plus years of work experience. Hence, these people are paid a lot. So, it is on you, if you have 10 years of... more than 10 years of experience, to learn AI and lead this wave for the entire organization of yours, if you are a working professional.

[00:37:53] And you should be hiring people that way as well. Now, people who have 3 to 9 years of work experience, these are the people who would be trying to get hired at this point of time. And AI is the technology that can get you hired as well. You should be the ones

[00:38:09] building solutions, you should know wipe coding, you should know how to build automations, you know how... you should know how to improve the efficiency of processes by implementing AI technology at a less cost as of today. And people who are getting started with their careers.

[00:38:26] AI can be your unfair advantage to grow faster than everybody else around you. So, if you are getting started with your career at this point of time.

[00:38:34] you are at a great place, and I'm very happy that you're attending this training over the weekend. Give me a thumbs up if... why learning all of this

[00:38:43] for you is important, specifically for you. If... give me a thumbs up if you have gotten clarity about this, because I want everybody, irrespective of how many thousands of people we have on the call, I want everybody to have that sense of reason and purpose.

[00:39:00] As to why you are dedicating the 16 hours to this training, so that you take it seriously.

[00:39:07] And as that sinks in for you, I also want to show this, research paper that was put out, right? Which we pulled out for all of you. The way companies are operating is also fundamentally changing. We are not probably going to be working with as many human beings as we have until now.

[00:39:26] We are going to be working with AI models and AI systems, so it's important for us to be able to juggle around with all the AI models and AI systems that we have access to.

[00:39:37] And if we are able to do this.

[00:39:40] there is a big opportunity for all the working professionals in the space of consulting and freelancing as well. I was speaking about this, remember?

[00:39:49] The smartest of the smartest people have already started doing it, and you see this all over the internet with people putting out content about how they are trying to run their own micro-businesses and all of that. Why? It is because

[00:40:03] If you have a strong understanding of how to run businesses, and if you know

[00:40:08] how AI can be leveraged.

[00:40:11] This mapping will bring a lot of opportunities in the form of consulting to you. And that is... this is the future that we are essentially seeing as well, and this economy of consultants and freelancers will continue to grow, at least for the next few years.

[00:40:27] Till more AI generalists sort of come into the market. Right now, the demand versus supply, there's a huge gap. There's a huge supply for AI orchestrators or AI generalists. Sorry, huge demand. However, not enough supply, because not enough people are learning generative AI.

[00:40:47] And I got a sense of that when all of you went ahead and said that you're beginners as well. Now, quickly talking to all the entrepreneurs and hustlers, but I'm gonna keep it short for this bucket, because entrepreneurs and hustlers usually are always on top of things.

[00:41:01] Now, while you already know what the future of Teams would look like, people, you know, in countries or in places like San Francisco are putting up billboards that the era of AI employees is here. We don't have to hire as many human beings as

[00:41:17] before.

[00:41:18] Now, what does that really mean? It puts all of us in probably the best time to start something of our own, because the time that it used to take to go from idea to launch, today, if I have an idea to launch an app, I could probably build that application in a week.

[00:41:35] Not in months or not in years.

[00:41:37] And I don't have to have multiple developers working with me to build that application. I could start it off myself, and then have a few of my friends help me out.

[00:41:48] So the timelines have essentially gotten crunched because of AI. The amount of money required to start something of your own, or grow something of your own, has sort of come down, because you can do a lot of things all by yourself. And it does not matter what kind of a company you are running, or you want to run eventually. We are a company that today has more than 200 plus employees.

[00:42:13] And most of what we do today, I think in the last 2 years, we have been able to increase our efficiency by 10x.

[00:42:21] because of deploying a lot of AI systems, and you're going to see how we ourselves use AI day in and day out, so that you get a sense of how you can make professional use of this technology as well. But be it a product-based, service-based software that you're running, or a traditional business, I think you should try and start deploying generative AI solutions. We're going to be learning all of that, but I quickly also want to share

[00:42:45] show this video to all of you, because what you have been hearing is me speaking. But I want you to listen to something that Sam Altman went ahead and said sometime back. This was almost two, two and a half years back. I'll tell you why I'm playing this old video right now.

[00:43:02] Just 30 seconds of this.

[00:43:05] smaller teams, thanks to these tools and these technologies, are gonna be able to do so much more. Is that a trend you're seeing from the startups growing around y'all in Cerebral Valley?

[00:43:15] We're gonna see 10-person billion-dollar companies pretty soon, like billion-dollar valuations. And the thing that...

[00:43:22] I... in my little, like, group chat with my, like, tech CEO friends, there's this... there's this betting pool for the first year that there's a, a one-person billion-dollar company.

[00:43:32] Which would have been, like, unimaginable without AI, and now will happen.

[00:43:36] I'm so happy you said that, because I literally just wrote that out in a letter to my LPs for an AGM. That I... this...

[00:43:46] I hope you got what Sam Altman was trying to say in this particular interview, right? Now, I'll give you the context. This was...

[00:43:54] Almost two and a half years back, in one of the interviews, he went ahead and said that today, or in the future, it would not be, you know, difficult to imagine companies being led by one person.

[00:44:07] doing a revenue of a billion dollars, and this is something that he said two and a half years back, and all of us saw this, and we were like, is that really going to happen? Guess what? It happened already. There's this company called, or there's this tool called OpenClaw, and it went viral.

[00:44:24] I'm sure a lot of you also would have gone ahead and heard about it. Yes, no, on the chat, if you have heard of OpenClock, you might have heard about it on the internet, on YouTube, on Instagram, you know, people buying Mac Minis, people trying to install a lot of servers of their own, people trying to run multiple instances on their own.

[00:44:43] Yeah, and you might have heard Vivo also speaking about it. The person who built OpenClaw eventually ended up selling OpenClaw, and that whole code, I mean, it was, of course, it's now open source.

[00:44:57] But OpenAI went ahead, and in fact, Sam Altman went ahead and hired this person who built OpenClaw. And he goes on to say that he was hired for almost a billion dollars, because now OpenAI is building on top of it.

[00:45:13] And we're going to be seeing some incredible launches coming out very, very soon that is built on top of this technology, and we have been seeing that space

[00:45:22] growing ever since OpenClaw also launched, right? So, the beauty is, single-person unicorns are now a reality, and we just do not know what the future... what else the future has in store for all of us to see. But the last two and a half or three years have been very, very exciting, and the future also is looking very, very promising, and this

[00:45:45] entire mastermind is going to give you that kickstart. It's going to give you two kickstarts. One.

[00:45:52] to help you get into that AI generalist mindset, and two, to go from 0 to 1 in your generative AI journey, and truly understand how to use, what to use, where to use, when to use.

[00:46:06] Now, in order to start the journey, what are some things that we need to start the whole learning journey with? Well.

[00:46:15] like, you know, the song that I was playing was also mentioning, right? We start with the foundations. How many of you liked the music that I was playing at the beginning of today's session, where the song itself was saying, welcome to Outskill, here we start with the foundations, right? That is what the first 3 hours are going to be all about. We are, of course.

[00:46:37] going to go ahead and talk about how do these AI models really work. We have been using them.

[00:46:42] But how do they work? How to talk to these AI models? Understand which AI model to use where, and also, lot of you filled up the form mentioning that you want to know how to use AI tools.

[00:46:54] you want to know the world of tools beyond of ChatGPT and Claude. We're going to dive into all of that in the very first session, and I would want all of you to have a notebook

[00:47:06] most of the things that you're going to be seeing would be new for you, so have a notebook, keep taking down notes. I have a beautiful resource document as well that I'll be sharing towards the end of this session, but take notes.

[00:47:19] And as all of you prepare yourself for the next two and a half to three hours, I'll also welcome Raghweir in, and I will request him to go ahead and share a little bit about his own journey with generative AI that made him an AI generalist as well, so that you get a deeper sense as we get started with the session. Raghwir, I hope you are able to hear me.

[00:47:42] Yes, loud and clear. Can you hear me okay? Perfect. Yes, I can, I can. Folks, are you all able to see Raghvir on the screen and hear him?

[00:47:53] I like the lights in the background.

[00:47:56] Yes, that's an upgrade recently.

[00:48:01] Wonderful. Nice. I think we can get started, Agreed. Let's just explaining to everyone, you know, the role of an AI generalist, and I think if you are able to go ahead and share with people how your journey over the last 3 years has been, it'll make a lot more sense to them.

[00:48:16] Absolutely. I love that it has a name now, because when we started out the early bunch, we were seen as crazy people who don't know what they're doing, but now it's becoming a thing. Now companies are hiring for it, so it's probably something that, you know, I'll spend some time in the initial part of the session so that everyone gets a sense of...

[00:48:35] You know, what it feels like to be a generalist in general, and then how does AI kind of take it to the next level, right?

[00:48:44] Awesome. Let me get my tech in order.

[00:48:48] You can hear and see me okay? Can you confirm that you can also see my screen?

[00:48:56] There is some audio playing on the background.

[00:49:01] Sorry?

[00:49:02] There was some music as well. Yeah, yeah, I think it is...

[00:49:07] Some music playing in the background, let me try again.

[00:49:13] All good now?

[00:49:15] Yes.

[00:49:16] Okay, perfect. Let me take over, Funny. Thank you for setting the context. As always, folks, you've heard from Funny. There'll be a little bit of,

[00:49:24] Excitement, a little bit of fear, a little bit of...

[00:49:26] nervousness for the kind of updates that he shared, and I think that's a good place to be. That's really, really a good place to be, because for the next two, two and a half hours, we'll be going through some of the rapid developments, understand the basics first, understand how to use AI with immediate effect. After this session, how can you get better at AI, and then eventually go to a place where we are going into a toolkit.

[00:49:50] That can run your everyday, right?

[00:49:53] So, today's session is about Promise, about introducing all of you to this entire space and the kind of developments that are happening. I would say keep your minds open. I need your undivided attention. Ensure that you have your phones on silent.

[00:50:09] Funny's already nudged you. Sam Altman's also a big fan of that. Have a pen and paper with you, and of course, stay hydrated, because this will be intense, the brain will be processing. I also want to set expectations, because

[00:50:24] what... while it's impossible to cover every single hack, what we've tried and done is kind of spread this across various segments of life. So, we'll touch a few productivity tools, we'll touch a few, you know, financial tools, we'll touch a few creative tools, and we'll try and keep it as wide as possible, but it is impossible for me to kind of

[00:50:44] appeal to everyone's individual use case. So.

[00:50:47] The goal for you is to try and see what is possible, and then try and customize it, you know, for yourself.

[00:50:53] Then... I also want all of you to get into this builder's mindset.

[00:50:59] do not worry today about, you know, privacy, security, and the other, you know, major concerns that people have with using AI, because today is just about learning what's happening. It's not about taking your company data and putting it in an AI model, right? So today is about knowing what is happening and possible out there.

[00:51:17] and then trying to see, okay, what part of this can I actually imbibe considering my constraints? So I would love for all of you to come with an absolutely open mindset. You'll see that some of the ways in which we use AI, some of the ways in which the tools have evolved is

[00:51:31] incredible, and that is something that I want all of you to kind of go through with me.

[00:51:37] Now, before I begin any of that.

[00:51:39] like Vani mentioned, who the **** am I to actually be here and take this session, right? My name is Raghuvir.

[00:51:46] All my friends call me Arvie.

[00:51:48] I've been a marketer for 10 plus years, I've been a product guy for 5 plus years, and an AI generalist now close to 3 years, with ChatGPT almost turning 3, because since the day it came out, there's not been a day when I've not used it.

[00:52:00] Now, you can see that I've been a generalist way before this term has been through, and I think a lot of, you know, product folks and marketer folks who are out there also can relate to this, because you have to do multiple things.

[00:52:13] Right? Now...

[00:52:15] I've had the privilege of working with some great people at some great companies, so I was the CMO at NAS Daily, I was leading the South Region for marketing at Uber, I also built a lot of the ground operations for Red Health, and I also spent some time at a Chinese company called Ofo.

[00:52:32] So we have American, Indian, Chinese, and Middle East, all four, you know, spreads complete here. So I got a very, very diverse spread of culture while kind of building my career, and that's something that I'm, you know, super grateful for.

[00:52:45] Now, when you put a CV like this, or a, you know, a slide like this, right, it feels very pompous, right? It feels like, oh, this guy's got a perfect career. But the truth is, it's never as simple, because our CVs are the best version of ourselves.

[00:53:00] Right? We try to put the best, you know, insights that we have about us, and then compress them into a document and call that a CV.

[00:53:07] But the truth is more like this, right? Because when I started out, I wanted to be a creative guy, so I started doing photography. And photography professionally meant I was shooting babies, I was shooting weddings, it was very, very hard, but it was very, very satisfying.

[00:53:22] Then I realized that these photographers get work from agencies or studios. So I said, let me study what do we need to to get into agencies. Ended up doing my MBA, ended up in an agency.

[00:53:35] Then I figured.

[00:53:37] that at the agency, the clients give the work to the agency. So it was like a power struggle, you make 100 ideas, only 2 of them get approved by someone who doesn't even understand your idea. So it was super frustrating, right? And then I said, okay, let me move to the client side, maybe there I'll get control.

[00:53:55] Then I realized that my teams don't run at the same pace. There's so much, you know, office politics, this, that, etc, that made me feel like, okay, I need to kind of solve this as well. Then I ended up managing teams so that, you know, I can kind of control my whole arena, but that

[00:54:14] still felt limiting, so I said, okay, I'm gonna start my own company, I'm gonna become the CPO of it, and I built a couple of apps, launched them, scaled them up to 200,000 users, but then I realized that even here, I was getting that feeling of frustration that comes from being limited. And then I said.

[00:54:32] I'm gonna become this individual contributor who does everything by themselves. It was a crazy goal.

[00:54:38] But I had the time at the time because I kind of quit my job, and I was trying to figure out what to do, and this was 2022, when AI was just making an entry, right? So I had... I was one of the lucky guys who had the time to kind of keep up to pace with the developments that were happening.

[00:54:55] And that basically put me in a place where I could understand and absorb everything that AI was doing, and everything that was happening in this space. So for the past 4 years.

[00:55:05] I've been learning, like you guys are learning today, and I continue to learn today with every new development that comes in. We try and catch up. It's impossible at the pace at which the things are going, but we try, right?

[00:55:18] Now, one common pattern that you would have noticed in all of this is that

[00:55:23] I was a frustrated guy at work.

[00:55:26] And I'm sure a lot of you here can relate, because your days are moving like this, right? My 10 plus years in corporates and startups.

[00:55:35] was, oh my god, I'm excited for this idea, and then it immediately moves to, man, budgets didn't get approved.

[00:55:43] Or, oh my god, we got, you know, a new star to do a campaign with, and then immediately it'll be, they're not available for the next 6 months. So every time I got excited, there was something that was, you know, ready to dull it down, or kind of come in the way. Of course, we did some good work, but, you know, the pendulum continued to kind of swing, right? So I was always feeling like I was blocked by people, by processes, by things.

[00:56:07] And it could be anything that could really put you off when you feel like you're in a flow state, right? You want to ideate, you want to create, you want to do some good work, but you have to also manage all these other responsibilities and, you know, other blockers that come your way. And...

[00:56:22] to fix this for the last 3 years, I can say I've officially become an AI generalist.

[00:56:29] And what my life looked like earlier was do a little research, do a little analytics, do a little content, do a little growth, do a little CRM writing and UX. And every marketer in the room today can agree that

[00:56:41] Your jobs are not limited by, hey, I'm doing marketing, but within marketing, there's tons of things, right? Same thing with product.

[00:56:49] Same thing with leadership. So, most of your roles expect you to know multiple things today, and that is kind of like an unsaid expectation, even though it won't be on the CV or the job description.

[00:57:00] But if I was a 20% candidate in all of these, and I did growth very, very well.

[00:57:07] Today, I'm able to take

[00:57:10] all of these to 80%, right? I'm able to kind of scale all of these and feel like I can do analytics at an 80% level.

[00:57:18] content at an 80% level, and what does 80% here mean, right? Like a specialist in analytics, I can do 80% of their work. How? I'm stacked with 60% of AI tools, models, and assistants.

[00:57:31] help.

[00:57:33] Bing bandwidth.

[00:57:38] Helping me expand my capability, and that is what made me feel and flip the finger to the market and say that I do all of this on demand, whenever there's a particular use case, I'm gonna just dive in, I'm gonna use AI to help me learn, I'm gonna use AI to kind of help me figure things out, and then I go ahead and, you know, execute my work.

[00:57:57] Now, I'm sure there's a lot of, you know, different people in today's session, so I'd like to get a pulse of where we are at. So let's have a look at what the room is feeling like today.

[00:58:08] Give me a color, because I'm gonna open the chat now, and I'm gonna try and figure out what this room is like. How many generalists do we have versus how many specialists? Who's winning the room?

[00:58:20] Okay, lots of reds today.

[00:58:22] That's unusual.

[00:58:24] We have a lot of generalists nowadays attending the sessions, but this one in particular looks like it's dominated by oranges and reds.

[00:58:34] Okay, awesome. This room feels... definitely feels like it's dominated by the redder side of the spectrum. Now, why do I ask?

[00:58:42] I ask not because this session is for one particular section, I ask because...

[00:58:48] We all want to meet in the orange today, right? So, a generalist can today upskill and become a specialist in a certain topic on demand very, very quickly. So, what used to take a year probably takes a month now, what takes a month probably takes a day now, right?

[00:59:05] And a specialist who spent years mastering a particular topic is now in a place where they can kind of expand horizontally or vertically, and figure out the next few steps. So, expanding your role in whichever thing you do.

[00:59:21] It's a great time for that. And if you're a specialist, you now have deep wisdom, and AI is great to work with people who have deep wisdom about one particular area.

[00:59:31] Now, That's all chatter, right? In the last 10 months, let me just show you what this translates to.

[00:59:39] I could build a two-person startup called as Regality AI. It's a fintech that works in the space of foreign exchange and the management act that comes with it. So, what CAs do and charge you for, you know, opinions on how to receive money from different areas.

[00:59:57] We are now able to convert that with the help of an AI agent that sits and gives you advice.

[01:00:04] Then, I run my consulting company called as Build With Arby. It's a one-person entity, and I'm doing five projects with the help of an army of agents, and that is something that's become my core work. And on the third side, I got diagnosed with ADHD when I was 32.

[01:00:22] And I realized that, you know, the way I cope with it is different.

[01:00:27] Right? So, along with my therapist, I sat and kind of documented all of it and said, let me help the community that is having ADHD and is battling with this condition. So I said, let's go ahead and launch an app for everyone who kind of wants to solve for this, and we ended up publishing this on iOS.

[01:00:45] completely vibe-coded, zero development effort from technical devs involved. Of course, there was a few elements that were guided by my friends and stuff like that, but the end-to-end development, design, and, you know, publishing and marketing

[01:01:00] Is done by me.

[01:01:02] Right?

[01:01:03] Now, just 2 years ago, this would feel like, okay, this guy is crazy, this guy is distracted, this guy is doing so many things, there's no way he could be sleeping well. But the truth is, it was very, very, very manageable to actually run all these 3 things in parallel, and it continues to be so. And that's a message that I want all of you to take, that

[01:01:22] The world, as we know, is changing. Work, as we know, is changing. Our capabilities, as we know, are changing.

[01:01:30] So, in short, I've been cooking, and I'm here to share the recipes with all of you. I'm going to be very, very liberal with my knowledge, so you'll see some parts of my companies, my workflows, and things like that. I hope all of you are ready for it.

[01:01:45] Let's get started, and like I said, we'll begin with the basics, and we'll then dive deeper.

[01:01:50] Now, most types of AI that we use today are called as generative AI, right? We've been using AI for a long time. You might not have realized it. Every time you open Gmail and go to your spam filter, have you ever wondered why that went into spam and it did not come into inbox?

[01:02:08] Because there was AI working in the backend and identifying, okay, this feels like an offender, let me cut them out from the inbox and put them in the spam, right? We've been hearing about Tesla's cars, driverless cars, and we've been hearing multiple companies taking a bet on that. How is that working? How is it able to...

[01:02:26] identify or repeat what a human does without the human being there. That is also artificial intelligence. But...

[01:02:33] what we use at work generates things, which is why it is called as generative AI, and that is the AI that kind of is relevant to most people in this room today.

[01:02:45] Now, what is generative AI?

[01:02:47] It is a type of AI that creates original content, such as text, images, and videos. So you might have seen Nano Banana generating text, a lot of Ghibli art and things like that that became viral. We also started seeing AI-generated videos, it's in our WhatsApp, you know, our parents are watching it, it's everywhere now.

[01:03:05] But how does it do this? It does it by learning patterns from very large datasets, right? So...

[01:03:13] If you look at the overall area of how did AI come to be.

[01:03:19] Artificial intelligence, the outermost circle that you're seeing on your screen, is about 50 years old, 5 decades old, right?

[01:03:26] There's a Turing's test that basically says that if I show you something that was created by a computer.

[01:03:34] And if I show you something that was created by a human, and you're not able to tell the difference as to this was made by a human versus this was made by an AI or a machine, then that means that machine is intelligent. So this is a very, very broad, defined term.

[01:03:49] And that is where it began. It was there in the movies, we kind of grew up watching all of this in sci-fi. But today, we are living a part of it. Why? Because we went to the next step, which was machine learning. And this is where computers or systems started to learn from data, and they were able to predict and make decisions.

[01:04:08] So if I... if I show a computer's camera 100 images of a cat.

[01:04:12] And then I show 100 images of a dog.

[01:04:15] Then I show a new cat, it could identify and say, hey, this 99% looks like a cat.

[01:04:21] Right? And that was the computer learning, because it never saw that cat before. And the best part was, once it started going deeper, we started seeing that deep learning or neural networks, very similar to how our brains work, started happening, which means

[01:04:37] think of your close friend circle, right? You immediately think of a few people in your head, right? Just close your eyes and try to do this exercise. Then think of your close family.

[01:04:46] then suddenly think of your colleagues and your, you know, outer circle and friends. And you can see that these nodes are popping up in your head, right? The closest ones feel very, very close, and then there's a little distance from the next layer, and then there's eventually acquaintances and people you've just met.

[01:05:01] Right?

[01:05:02] our brains are beautiful at visualizing this and also storing this, right? So we try to mimic this in the computer world, and that is called as deep learning. So what happens in deep learning?

[01:05:12] For that same set of data, I did not tell that these are cats or these are dogs. I just go ahead and keep giving it images of cats, and keep giving it images of dogs, and then suddenly I bring a tiger.

[01:05:24] And I show it to the computer, and the computer's like, hey, this looks like 70% like a cat.

[01:05:29] We've not told it what cats are, we've not told it what dogs are, but it's figured out by itself because it's got so much exposure to data, and it realized that the tiger is from the cat family, so I should link it similar to input number A.

[01:05:43] And that is a very, very rough example, even though the math is very complex. That's a very rough example of how models start to learn.

[01:05:51] Right? And then, eventually, we have large language models. Now, large language models, or LLMs, are something that you'll hear a lot about once you enter this space, and they are kind of the main models that you talk to.

[01:06:03] Right? When you talk to ChatGPT, you're talking to an LLM. When you talk to Gemini, you're talking to an LLM. You pick any major model out there.

[01:06:13] you're actually talking to an LLM, right?

[01:06:16] So, you've all experienced this, right? You put an input into ChatGPT, and magically it starts typing out output, and suddenly you have a very nice and coherent response.

[01:06:27] You say, write poetry, it's able to write poetry. You say, write an essay, it's able to write an essay. You tell it, write an email, it's able to write an email. Now, how does it do this?

[01:06:37] Because it does feel magical, right? And let me tell you, most things in life that feel magical are usually

[01:06:44] Mathematically. So let's understand the math behind this a little bit. It'll get a little bit technical for the next 5 to 10 minutes, but it'll help you get a long way in terms of using AI. So bear with me, and pay full attention to your screens for the next 5 to 10 minutes.

[01:06:58] Now, I'm gonna take a meta use case like this. Imagine I put this prompt into ChatGPT.

[01:07:04] I say, explain large language models, which are the LLMs that we just spoke about, to me, like I'm 5 years old, so I'm basic, I don't know much, I want to learn this topic, and this is a prompt that I use for a lot of topics that I'm just getting into.

[01:07:18] Explain interior design like I'm 5 years old. Explain how to make coffee like I'm 5 years old. Great prompt to get the basics for yourself done.

[01:07:26] Nope.

[01:07:28] The first step is called as tokenize. Now, tokenize is the computer breaking your query into smaller units, like how we use words and alphabets, right? The letter E is important to write the word explain.

[01:07:43] Tokens are like the alphabets of the AI world. Every sentence that we send is broken into multiple tokens. It can be a single word, or it can be a group of words, but you can see that at the bottom in colors, right? Purple, green, orange, so you know that explain is a token, large is a token, language is a token, and so on and so forth.

[01:08:03] So whatever you send, it's not reading it like a human does. It's actually breaking it down into individual words, and then it does something very interesting. If you go back to your fourth or fifth standard the first time you entered a computer lab in your school, you will realize that

[01:08:19] We were told that computers only understand numbers and binary, right, zeros and ones. This is an extension of that.

[01:08:27] To understand whatever we type in, the computer has to convert the text into numbers.

[01:08:34] And the way this works is that similar words have closer distance, so that it can retrieve immediately.

[01:08:41] A king and a queen will be, you know, close to each other, but a king and a barber will be close, kind of farther away. But a king and a dog will be even more farther away, right? Because the distance between these words, as we sense it, is increasing. So mathematically, also, they will be far away.

[01:08:57] But they all will be in the larger blob of living things, right?

[01:09:02] Now, a king and a scissor probably is going to be very far away, because the king might use a scissor once in a month.

[01:09:09] Right? So similar words have closer distance, so that they can be retrieved immediately, and they can be beside each other. And that is why the computer is converting these into embeddings, so that mathematically it can put them on a graph, and understand that... which are... which are the words that are similar, and which are the words that are different.

[01:09:27] The third step is one of the most important steps, and I keep joking about it, saying a lot of humans don't have it today. It's self-attention. The model then focuses on the most important parts of your overall text. So your query of explained large language models to me like I'm 5

[01:09:43] Gets broken down, but it focuses on large language models, because if it only focuses on large, it's going to tell you about big things.

[01:09:50] If you only focus on language, it's gonna tell you about, I don't know, English, Hindi, Telugu. If it... if you only focus on models.

[01:09:57] You can imagine, right? So, it's trying to get what to pay attention on, and then focus on what is the second part or the third part that I need to pay attention on, which is like I'm 5 years old. Because if it misses either.

[01:10:12] it might end up giving us, like, a PhD-level explanation, and you're like, I already am overwhelmed by AI, I just read this, I understand none of it, I don't want this. Whereas, if it can catch

[01:10:22] like I'm 5 years old, it suddenly becomes much more convenient for us to understand, because we all can process what a 5-year-old can process, right?

[01:10:31] Then, it moves into the step four, which is it starts predicting word by word. So it's like fill-in-the-blanks, right? We've all done fill-in-the-blanks as a kid. Now, let's do a quick exercise. I want all of you

[01:10:43] To answer this question by filling in the blank, I'm gonna read it out, and towards the end, go ahead and drop your answers in the chat.

[01:10:52] Imagine you have a super smart robot friend.

[01:10:56] Who has read every Dash.

[01:11:00] Let's open the chat, and let's hear out what people have to say.

[01:11:06] Lots of answers, lots of books.

[01:11:11] A few variances, a few people who are probably not looking at the screen.

[01:11:17] But...

[01:11:18] Here's a social experiment, right? Let's pause the chat. You might have seen in the chat that almost everyone said it's a book, and a few people said it's a bank, and some people said emotions and words and other things.

[01:11:31] Now, what's happening? Very interesting. On the screen, you have the context saying, what is the likely word, book or bank. So, everyone who is paying attention to the screen.

[01:11:41] Wanted to be right. And they said, bank doesn't make sense at all.

[01:11:45] It must be book. And then you went with book. So you took a guess, you predicted, saying this is the right answer.

[01:11:53] Let me tell this to Arvi in the chat.

[01:11:56] Now, let's do this exercise again, and it's gonna get really interesting, because this will also help you understand how we are similar to AI, and how it is being designed after us.

[01:12:05] I'm gonna open the chat again, but this time, you're not restricted with the word books or bank, you can fill in the blank with anything that feels accurate and correct to you.

[01:12:15] Let's go ahead and fill it. Imagine you have a super smart robot friend who has read every dash.

[01:12:22] And folks, You can watch the chat.

[01:12:25] The randomness of words just exploded.

[01:12:28] I'm gonna read a few, right? Things, words, lines, articles, emotions, information, instructions, data, messages, mind, moment.

[01:12:36] Newsletters, website, encyclopedias, mails, stories, humans.

[01:12:43] Look at the diversity of words.

[01:12:46] What happened just now is, I said, in your context window, you're not limited by book or bank, and the mind went crazy with answers.

[01:12:55] AI is doing the same thing. It's trying to predict what the next word is.

[01:13:01] And each word will define what the next word is going to be as.

[01:13:06] So the moment it said, imagine, it tried to say, who am I addressing? I'm addressing the user, so let me put a U there. Imagine you.

[01:13:14] What are we talking about? We are talking about large language models. So, imagine you have a super smart robot.

[01:13:21] Because we said.

[01:13:22] talk like a 5-year-old, talk like a 5-year-old would understand, and 5-year-olds love robots, right? So you have a super smart robot friend.

[01:13:30] But it's very knowledgeable, and I need to explain that to them. So, imagine who has... you have a super smart robot friend who has read every dash, and the last step is when it presents it to us. So, it takes all of these possibilities of words, and then tries and gets our approval.

[01:13:46] Have you all seen the thumbs up and the thumbs down in ChatGPT or Gemini or one of these models?

[01:13:52] So it's waiting for validation from the human, saying, hey, I've done a good job or not, please tell me. Because once you give it a thumbs up, it goes back to this, wow, my calculations were correct, let me go and repeat this for other users, because this feels like a good pattern.

[01:14:08] So the final answer would be something like, imagine you have a super smart robot friend who's read every book, every story, and conversation ever written, and when you get a question, it looks through all the words it has learned.

[01:14:20] And finds the best answer, just like magic.

[01:14:25] Easy to understand, right?

[01:14:27] From understanding the complexity of AI, using a query about AI, we've come to the final answer. Five-year-olds love robots, they love books, they love stories, they love people talking.

[01:14:37] And they love one thing the most, which is magic. Anything that feels like magic. You just say, ***** and they're excited, right? So, AI understands that 5-year-olds love this terminology, and it's able to kind of replicate all of this.

[01:14:53] Now, this is a screenshot worth taking, because the 5 steps that every model that you talk to today

[01:15:00] is going to go through these elements. Funny's also conveniently put that for you in the chat. You tokenize, you embed, you then pay attention through a technology called as transformers, you then start predicting one word at a time, and you finally present it in the way that the user wants it to happen.

[01:15:17] Gun!

[01:15:18] That is us understanding a little bit of how generative AI works. Like I said, most things that feel magical are often mathematical, and today we went into a little bit of the math without doing much calculation, just understood the concept, right? And that is enough for you to start making more out of the AI that you use, right?

[01:15:37] Now...

[01:15:38] You gotta... you gotta know a little bit about how it works in the backend. Let's move to the front end, right? The chat interface that we're all so familiar with.

[01:15:47] Just one moment, folks.

[01:15:49] Yes.

[01:15:50] No.

[01:15:52] Once you understood how AI works.

[01:15:55] you have to kind of focus on, how do I get the outputs that I want? Because why are you here, right? You want to make AI for you, you want to learn AI.

[01:16:05] manner that is, you know, useful, fruitful to you. And that can happen, learn how to talk to these models.

[01:16:13] You might have heard of this term, it's becoming very, very popular. Used to be called just prompting, then it became prompt engineering. Prompt engineering is now a subject in a lot of places.

[01:16:22] There are so many prompting techniques today.

[01:16:26] That learning all of them is almost feeling impossible.

[01:16:30] So the best way that you want to learn prompting, and this is again a mindset thing, is to figure out

[01:16:36] What is the style of prompting?

[01:16:39] That actually works for you, right?

[01:16:42] And I'm gonna give you one that works best across all use cases, because this has the fundamental blocks in mind.

[01:16:51] If you come from finance, you might need to tweak this a little bit. If you come from creative, you might need to tweak this a little bit. But you have the basic structure.

[01:16:58] Right? You have the basic structure in place.

[01:17:03] Without skill, we call it the magic prompt formula.

[01:17:09] It works, right?

[01:17:12] If... An email to 10,000 subscribers.

[01:17:17] Like, all gathered here today, we want some more people for the next Saturday.

[01:17:22] I'm really so sorry to interrupt.

[01:17:24] Your internet is slightly breaking.

[01:17:29] Let me just check.

[01:17:31] Yeah.

[01:17:33] gonna move to 5G now. Is it better now?

[01:17:37] Let's give it one second. Yeah, I think it's better now. It's better now.

[01:17:43] Okay, just interrupt in the next few minutes if it goes off. I'll try and move to the hotspot then.

[01:17:49] Fine. I think it's fine now. Okay, cool.

[01:17:53] So, if we... Yeah, if we had to do a meta use case, Like, trying to figure out...

[01:18:01] how to get people to the next workshop like this that is happening, then how would you go ahead and write this email out? Now, the easiest one would be to just take this and post this in a chatbot, and it'll write an email, right? So, in fact, let's do that. I'm gonna take a screen grab of this real quick.

[01:18:21] I'm gonna be very lazy in this workshop, right? I'm gonna take a screen grab of this real quick, and I'm gonna say, go to a Gemini.

[01:18:28] And start a new chat, and paste...

[01:18:37] Okay, just one moment, I think we didn't have the screenshot.

[01:18:41] Okay, now it should work.

[01:18:44] Oh, yeah, it did work. Hey, go ahead and execute the task in the screenshot.

[01:18:56] I think there is a little bit of lag rugby.

[01:19:01] Yeah, yeah, even I'm noticing it.

[01:19:04] Let me just go ahead and switch internet.

[01:19:10] Give me 30 seconds, folks, you might lose...

[01:19:26] Folks, there is going to be a resource document that'll come your way after the entire session gets done, but I hope you're taking down notes as well, and I hope the pace is perfectly fine for you. Drop in yes on the chat. I've just turned the chat on to myself, so that the steps remain the same, but is the pace okay for everyone?

[01:19:45] Perfect.

[01:19:46] Yes. Running, can you hear me okay now? Is it better? Yes. It's all perfect now. Okay, perfect. It feels real-time, I can hear you right away. All right. So, our voice-to-text has converted what I've said into a chat, and I say yes, and it's going to go ahead and write an email for us.

[01:20:03] Because we've given it context over the chat, right? Hey, everyone, I'm excited, announcing an upcoming generative AI workshop, so on and so forth, doesn't have any details, so it's giving us placeholders, and then it said, oh, it knows me, and it knows a company that I'm trying to build. So it did go ahead and personalize a little bit.

[01:20:21] But this is not, you know, up there, right? I can't just copy this and paste it in my email, purely because it doesn't understand the kind of high-energy workshops that we are doing. It doesn't understand a lot of what this experience that you're going through is, right? Now, the same prompt

[01:20:37] If I were to expand it like this.

[01:20:41] Right? What am I doing here? I'm breaking it down into a role, I'm giving it a task.

[01:20:47] I'm giving it a bunch of instructions, and then I'm giving it data.

[01:20:52] Right? So, I can take a screenshot again of this.

[01:20:58] Right?

[01:21:01] just that part, and I can come back to Gemini, and I can paste it here and say.

[01:21:06] Hey, I don't think I prompted you well last time. Here's a more detailed prompt.

[01:21:11] write this for a generative AI workshop that I'm doing next week.

[01:21:22] Now watch how this changes.

[01:21:27] The emoji, you can see the first part. It's picked up that it's outscaled.

[01:21:32] Right? The entire over-the-top fun and energy that we bring into these sessions, it's got that... that, feel, right? That brand element.

[01:21:41] Hey, let's be real, we're all past the stage of asking ChatGPT, write me a poem about a toaster. We've all been there, we've asked it to do silly things. You're 25 plus, you've got a career to scale, and you're probably tired of seeing AI disruptors on LinkedIn making everything look easier, and that actually happens.

[01:21:58] Whether you're crushing it in marketing, tech, product, or design, it's time to stop poking at the AI box and start building an engine.

[01:22:05] Why this is a no-brainer. Nice section division, right? Look at this email.

[01:22:10] Where it said real-world AI Agents, RAG, Strategic Integration, live demos, and here you're talking about workflow integrations, designer marketer hacks, product and tech workflow hacks. So all the people that are here doing these roles in their lives suddenly can relate.

[01:22:25] Right? And then it says, I'm joining, bonuses are there, you'll get exclusive prompt collections, you'll get a tool vault, which is exactly what you will be doing, right?

[01:22:33] And then it went ahead and still signed off with my memory. So this is a... this is a point where AI is not always right, right? So you have to read and validate and ensure that, hey.

[01:22:43] Hey, I'm writing this as a mentor at Outskill, not as the co-founder of Pipers. Can you correct, you know, wherever you mention the Pipers, right? Like you work with a creative member, you're just giving them feedback, and soon it's going to, you know, kind of sign off with my signature here.

[01:22:59] Right?

[01:23:00] Avi Nestila, mentor at Outskill. There you go.

[01:23:03] So now, it's kind of close to final. I can just go ahead and say, hey, send this email out, and if you have Agentic AI, it'll actually do that for you as well.

[01:23:13] Let's take a quick poll, guys. You have this email, and you have this email that we originally, you know, started out with. Which is the one that you think you would respond to? Is it the one that has...

[01:23:26] you know, standard template work like this? Or is it something that is super personalized to your, you know, use case and style like this? Where would you be more inclined to respond?

[01:23:40] Definitely the second, right? It's a universal winner. It's a universal winner because...

[01:23:45] We gave it a lot of clarity as people running the show here. We said that I really want to understand how Outskill works, how Outskill operates, and then go ahead and give them a particular email that is very, very personalized.

[01:24:00] Now, you can do this at scale. Once you feed AI with this information, it starts understanding your style, right? You can build custom bots that just write emails in your

[01:24:09] your particular fashion, and you can repeat this. So we'll also figure out how to do that as a part of this session.

[01:24:17] Right? So from moving from a very generic email, we ended up writing a super personalized cold email using AI. That same

[01:24:27] task of generating an email for 10,000 users can be widely different, right? And in real life, also, you will observe this. You might have observed that some people are amazing writers, and they give you great work, and some people are still figuring out and learning, and you need to edit a lot with them.

[01:24:42] Right? But the magic prompt formula is when you give anyone

[01:24:47] a lot of clarity on how that task needs to be done, because you're an expert at it, and you go ahead and say, this is the kind of outcome I want to see, and you will see that AI responds to great instructions in great manner.

[01:24:59] Right? There's a formula that we keep talking about in the world of AI called as GIGO, or G-I-G-O, which means if you give garbage, it's gonna give you garbage. So garbage in, garbage out. But I look at it differently, I'm an optimist.

[01:25:13] I call it golden, gold out. So if you're able to articulate your prompts magically, like we just did.

[01:25:19] then you give it gold, and it's going to give you back gold back in your favor, right? So that was us understanding at a very broad level on how a model can respond to your instructions, and how can you get the kind of outcomes that you're looking at for your particular use cases, right? And this is very generic.

[01:25:39] Anyone can use it. Funny's posted it in the chat. You will see that you can convert any query into a role, saying, hey, you are an expert, blah blah blah. Task, very clear description. It forces you to think and describe it properly. Instructions, and then eventually data.

[01:25:56] That way, you're getting the most of what you can from a model.

[01:26:00] Now, the next part you want to figure out is...

[01:26:04] I now know how to understand a model a little bit, I understand how it's responding back to me. Now that I understand it, I've figured out how to give it instructions, I know how to prompt a little bit, but

[01:26:15] I have to figure out who to work with, right? Do I work with an intern? Do I work with a CEO?

[01:26:21] In the model world, this disparity also exists. You have fast, very light models that respond like that without thinking.

[01:26:30] And you have very deep models that take tons of time, but give you Amazing quality output.

[01:26:38] So you're always making trade-offs between, do I need to use this fast model, or do I need to use this thinking model, right? And we'll go a little bit deeper into that, because whenever you're talking to your favorite assistants out there, whether it's ChatGPT Cloud, Gemini, Meta, Copilot, Grok, you're actually not talking to the final

[01:26:58] application, you're talking to what models these companies provide. So, OpenAI runs a research firm that generates GPTs, right?

[01:27:08] Generative pre-trained transformers. That's what GPT stands for. Generative is generative AI, and transformers we spoke about a bit earlier. So GPT is a very, very complex mathematical, you know, operation that gets you these models to work and play with. The latest one is 5.5, that just came less than a week ago.

[01:27:28] And it's getting amazingly good.

[01:27:31] So, if you talk to a GPT 5.5 versus a GPT Mini or a Nano, you will see the difference in speed, in quality.

[01:27:41] Same thing with Claude. If you talk to Opus 4.7 versus Haiku 4.5, which is their fast model, you will notice a huge difference. Same thing with Gemini. If you want good tasks, you will notice that you want to talk to the Pro model. So, if you notice what we did just now.

[01:27:57] Right? And you'll notice this a lot. We were using the Fast model. You can focus here, in the bottom of your screen. Right? You have your fast, your thinking and pro, they're making it easy for us because they think that we don't understand the versions. So Fast is talking to the Gemini 3 Lite version.

[01:28:12] And Pro is talking to the Gemini 3.1 Pro version, right? That is the kind of difference that you'll start noticing. And this is one of the things that'll make you move from a basic user to a Pro user.

[01:28:23] In every interface, you're going and finding out, okay, what model am I talking to? How can I talk to the best model for my task? If it's a silly how to make an omelette recipe, I'll use fast.

[01:28:32] Right? But if it's a how to figure out how to fix my engine, then I'll probably use a pro. How to solve this mathematical problem? I'll probably use a pro. How to understand this concept? I'll probably use thinking, somewhere in between. Right? So you're choosing models for the right task.

[01:28:48] Now, let me ask you a quick question. You're seeing a lot of models here, but how many models do you think are out there in the world?

[01:28:57] Okay, let me narrow that question down. How many models do you think are there that are commercially available, and you can use them tomorrow?

[01:29:09] I see a few people have attended this session before, because they're very precisely close to the answer. I love it that you're back here again, thank you for that.

[01:29:17] Now, the way to understand this... is...

[01:29:22] going to a tool called as Open Router. So you can see that, as of today, there are about 620 models. That number is growing. When we took this screenshot, it was 617 models. We'll go ahead to Open Router and see

[01:29:37] What is happening in the world out there?

[01:29:40] Now, Open Router calls itself the unified interface for all large language models.

[01:29:46] they are like the Amazon for AI models. You can go here and shop for different models, right? And if you go to models, you'll notice that there's so many models available for you, and you can literally, you know, search through, okay, I want to talk to Claude.

[01:30:02] and you'll get clawed. I want to talk to GPT,

[01:30:05] And you'll get all your GPTs in there. I want to talk to Gemini, you'll get all your Geminis in there, right? Now, these are the popular models, and you'll be like, okay, this is great, why should I go here? I can go to OpenAI, I can go to Google, and so on and so forth. Now, that is where the rankings tab is very, very important.

[01:30:22] Now, the rankings tab is going to tell you what are the top models that are being used

[01:30:28] In this particular week.

[01:30:30] And you can say that.

[01:30:32] In May 2025, 2.13 trillion tokens were being used, so you can see the number here, right at the bottom. Each of these is growing and growing and growing and growing, and you'll realize that just through Open Router.

[01:30:46] 20 trillion tokens are being used, so the \$19.2 trillion that you see at the bottom.

[01:30:52] Here it was \$2 trillion, here it is 20 trillion. So in less than a year, 10x improvement in the use of AI has happened.

[01:31:00] And all these colors are the various models. So you can see all your favorite models, but you'll see a few names that you've never heard of. And don't be surprised. Some of the work that is happening in China is almost

[01:31:12] Unnerving and so good, but also under the carpet, we don't even notice that it's happening until we come to platforms like this.

[01:31:21] Here's the leaderboard for this week, and you can change this, right? You can say, I want to pick the best model this month. No, I want to pick the best model this week, right? So these rankings keep changing, and you will notice that, you know, the first model is by Alibaba called SQUEN3.6. A lot of you might have not even used it.

[01:31:39] But because it's free right now, people are going mad in the world behind this. But the Sonnet 4.6, which is one of the powerhorses of getting coding work done, continues to top in rank number 2. Then the Chinese DeepSeek, which is an open source version, is again at rank 3. Then comes our Google's Gemini.

[01:31:58] Then comes the Opus, then comes other models that, again, you probably did not hear of.

[01:32:03] Now, why is this important? Right? You can go ahead and see who's winning the market, and this keeps changing every week. So, between XAI, which is Elon Musk's company, Google, Anthropic, and OpenAI, you have the top 4.

[01:32:17] And then you have a bunch of companies that are coming from China, and then there's one French company called Mistral.

[01:32:23] But why are we here? We are trying to understand what is the way in which I can use the best models for myself, right?

[01:32:31] Now, if you are a programmer, you will scroll all the way down to categories, and you'll say, I'm choosing programming here, let me understand what is the best model. And you'll notice that 50% of the coding world today is using the Grok code past one.

[01:32:46] It's very fast, it's very good, it's very cheap. That is why it is one of the most used models. Now, you can say, hey, I'm not a coder, I'm a marketing guy.

[01:32:54] I click on Marketing, and immediately this order's going to change.

[01:32:58] Right? You will notice that Grok has been replaced with Gemini, and suddenly there is a bunch of new models that are out here. In general, Gemini seems to be a favorite in the marketing family. So that's a good thing for you to know, if you're from the world of marketing, right? You want to begin with Gemini.

[01:33:14] If you jump again into legal.

[01:33:18] Right? The order's going to change again.

[01:33:22] lots of Gemini, one free GPT model, Grok has made it to rank number 3 again, right? If you come back here and say, okay, I'm not into any of these, I'm in healthcare.

[01:33:31] Again, you will see that the order of responses is changing, right? So, whichever department or whichever space that you come from, and they've given you quite a few options, this is a great place to come and shortlist and say, okay, I'm gonna pick my top 3 models from here.

[01:33:47] And I'm gonna start experimenting with them, right? How can you do that? So, for example, you're coming from healthcare.

[01:33:54] you can say, okay, DeepSeek V3.2 is the first one. Let me just go here.

[01:33:59] and start chatting with DeepSeek, right? I can search for DeepSeek, and 3.2 was the model, and I can chat with it and say.

[01:34:08] Hey, I want to know how good you are in healthcare.

[01:34:14] hey, I want to know how good you are in healthcare, right? So you do something like that, and you're basically going ahead and pasting

[01:34:23] your prompts, and you're getting a response. Now, this is you figuring out what model to use, so that

[01:34:29] Everyone in your world, whether you're coming from the marketing world, the legal world, the healthcare world, the tech world, the programming world, the design world, the creative world, we all come from different worlds, right? You're trying to figure out what your world is using.

[01:34:41] But how do you figure out which particular model to pick from the shortlist, right? And this is where we will move to our next tool, called as Multi. And as the name suggests, it allows you to ask multiple models in one go.

[01:34:56] for one particular query, right? So let's go back here, and let's pick our favorite models, right? So we have DeepSeek that has come. Let's actually go back one page.

[01:35:07] Let's go back to Rankings.

[01:35:09] And try and see.

[01:35:12] Which are the models that we want to pick, right? So, go back to Categories...

[01:35:16] Where are you categories? Yeah.

[01:35:22] Just one moment. So, we come here, and...

[01:35:27] We choose, say, healthcare, right? So we have Gemini, we have GPT, and we have, let's take another family, right? We'll take the Grok 4.1.

[01:35:37] If you want to compare these two models, you come to a place like Multi. Now, this is the interface of Multi, and you can see that it interestingly tells you, do you want to compare different models?

[01:35:48] Right? So I can chose, the DeepSeek world here.

[01:35:54] Right? So, let me choose the DeepSeek V3.1, I find that here.

[01:36:00] then I can go ahead and choose a Gemini model here.

[01:36:04] Right, let's see if they got the Gemini 3 family, they got the 3 Pro. Okay, that's something that I can take, and I'll try and see if they have the Grok models here, right? The Grok Code Fast one is there, the Grok 4.1fast, the exact model that we wanted to talk is also here.

[01:36:19] And... we have GPT-4.1 already pre-selected, so I'm gonna let that stay.

[01:36:24] So let's go ahead and, in fact, let me see if I can replace this. Can I replace this? No, I can't.

[01:36:32] Let's add the Grok.

[01:36:34] I'm gonna ask it a question saying, hey, what are the modern treatments for diabetes?

[01:36:40] give that to me in an 8-line poem. It's a pretty crazy task. But when I hit send, the beauty is you can see that your screen is split into 4 different elements.

[01:36:51] Right? And it starts answering you from the different

[01:36:54] models that are there. Now, your goal becomes, let me sit and compare, right? You become an evaluator. You're sitting and saying, okay, modern care for diabetes, you seek to find insulin pumps that work with the patient's mind. That is what the GPTs come up with.

[01:37:10] Injections of insulin, precise and clear. Pills like metformin help when used near. That's interesting. So that's from DeepSeek. For diabetes Ds, modern aids shine bright. Insulin pumps and pens control the fight. So all of them have written, you know, poetry. All of them have interestingly talked about modern technologies like SGLT and GLP-1.

[01:37:29] But, I feel like...

[01:37:31] Grok's done, you know, CGMs as well, so I'm going to give Grok the vote here. Of course, I'm going to evaluate this very closely if I'm doing this for a serious task, but you understand the drift, right? You've picked your top models, you've literally put them in a room and said, fight with each other, and you say, I prefer this response, it's accurate, and I like its style, and you go ahead and send feedback. So multi works on the model that different people from different walks of life will come here.

[01:37:54] And then tell you

[01:37:56] you know, exactly what they like, and that feedback is sent back to the models to train them. So, you are essentially training it, and that's why this product is available for you for free, right? You can add API tokens and use some of the pro models as well, but this is a great place to start if you want to know what you like.

[01:38:15] Now, there's one model type that everyone needs to know about. We try to narrow this down, right? If I tell you, saying, hi folks, here's 12,000 models that you need to go ahead and use, you will not like it.

[01:38:25] But if there's one model that's a versatile model, that's a generalist in the model world, right? Those are reasoning models. They just came last year, in January, and they've already become the center of people's lives. And you've already experienced them a little bit, right? OpenAI has GPT 5.5, 5.4 thinking.

[01:38:43] Google has Gemini 3.1 Pro, DeepSeek has the R1, Grok has the forethinking, Anthropic has the Opus 4.7 that again came 10 days ago, right? So reasoning models are incredibly powerful if you know how to use them.

[01:38:58] So let's go ahead and play with one, and after this, you know, I'm gonna give you a fun exercise that'll also work like a break, so please bear with me with this one demo. So let's go ahead and make this fun.

[01:39:10] We are all here on a Saturday, and I'm sure that, you know, Friday night should have been a fun one, or maybe tonight is a fun one. For me, the Friday night was hectic, so I'm thinking I'll plan something tonight.

[01:39:22] Now, I feel like... Throwing a party.

[01:39:25] But I'm not clear.

[01:39:27] I don't know if I want to throw a party at home.

[01:39:29] Or, I want to throw a party at office.

[01:39:33] Right? And I want to kind of do this creatively, invite people, and things like that, right?

[01:39:39] Now, how would I use AI for a silly task like this, right? If I were to use a reasoning model, I can use it as my thinking partner, like I'm almost planning this party with my spouse, right? So I go back to one of these models, say I'm going to use Gemini again for this case.

[01:39:57] And I'm gonna use the pro here. So this is something that I want all of you to do. So I use the pro here, and I say.

[01:40:04] Hi, Gemini.

[01:40:06] I feel like, having a party tonight.

[01:40:09] And I need you to help me figure out

[01:40:13] what is the kind of a party I should be hosting?

[01:40:17] I have two ideas in my mind. I could do something...

[01:40:20] Like a horror movie night with my friends.

[01:40:24] In, you know, pajamas and pizza and, you know, drinks on the side, and just have some lazy fun at home.

[01:40:34] Or I could host people at

[01:40:38] You know, a nice mixer.

[01:40:40] call my new colleagues at office and use it like an icebreaker. Either ways, I want to have fun. Today's Saturday night. So...

[01:40:49] Do this for me.

[01:40:51] Help me figure out all the parameters I need to consider in both these parties, so that I know the amount of effort that goes in and what all I need to plan.

[01:40:58] and give them to me as a comparison as to what are the options that are available, so that I can then pick one of these themes and go ahead with it.

[01:41:11] Right?

[01:41:13] the magic of voice-to-text, we don't have to prompt anymore. I literally felt like a certain, you know, thing, and suddenly that is all pasted here as a long prompt.

[01:41:27] It sounds like you have a great Saturday night ahead of you. Both of these ideas have completely different energies, I agree. And deciding between them comes to how much running around you want to do today. Yes, I want to do minimum running around.

[01:41:40] Okay, it says, the Pajama horror movie night. The vibe will be intimate, relaxed, and strictly zero pleasure.

[01:41:46] your closest friends, extremely low effort, dim the lights, you'll just, you know, need to make sure the volume of jump scares doesn't wake up my kids. Oh wow, it's personalized to that degree. You could finalize this plan at 4pm and still pull it off at 8pm, so the effort level is very low.

[01:42:02] You also need to figure out the professional icebreaker mixer, the vibe, the guest list, the food and drink. Again, it's used, family logistics as something that it has understood about me, and then it's gone ahead and given me a parameter comparison. How much prep time?

[01:42:18] What is the budget? How much house prep? How much social energy is needed? And what is the risk of flaking, or what is the risk of people, you know, crashing and not coming down to your party, right?

[01:42:30] So I'm gonna say... Okay.

[01:42:33] I really feel like... The Pajama Horror Night is my pick here.

[01:42:39] Can you go ahead and, generate a very interesting Invite for me.

[01:42:48] I want this to be A4-sized. I want this to express the theme of the party. I want this to express the dress code.

[01:42:57] And maybe give them a start time and stop time with what food will be available.

[01:43:04] Now, what are we doing right here, right?

[01:43:07] I am going to go ahead into Tools and say, create an image.

[01:43:13] And I'm going to hit enter, and while it's working, I want to show you that the old method of doing this would be ask a friend for a favor, or hire a graphic designer and tell them, saying, hey, I have this, you know, really cool party that's coming up, and now I want to, you know, go ahead and create a nice invite for this.

[01:43:31] The new method is you want to just go ahead and use AI to generate these for yourself.

[01:43:37] And for that.

[01:43:38] What we are using is called as Nano Banana, a funny name, but an amazingly powerful model for image generation, and it's available with Gemini.

[01:43:48] But if you're just starting out, you can do this for free in ChatGPT or Grok as well. All of these major players provide image generation for you to kind of use. So, you could go ahead

[01:44:01] and generate things if you have the clarity of how to prompt it, and if you have a vision of what you want to see, right? Now, let's go back to Gemini and see if it's completed the task.

[01:44:12] Folks... I'm gonna launch this on full screen.

[01:44:16] How cool is that?

[01:44:19] Would a designer even be able to generate something like this?

[01:44:25] In a couple of minutes, right? I'm gonna move this. In fact, this is a feedback tool. You can draw and tell, hey, remove this or add this, right? So it gives you the ability to add feedback and give it back.

[01:44:36] But...

[01:44:38] Pajama Horror Night, Cozy Screams, Pisa Screams, and Petrifying Dreams. It's actually written a poem line there. 7.30pm to late, until the final scream.

[01:44:48] Pretty crazy, right? Join us if you dare, the Den of Doom, hosted by my name.

[01:44:56] Now.

[01:44:57] If you thought this was crazy.

[01:45:00] What if we were to take this output?

[01:45:05] Right?

[01:45:06] Gonna download this.

[01:45:14] It's gonna take a moment.

[01:45:19] In fact, I don't have the patience. Oh, I have the patience, it's finished. So, I come to a new chat, and this time, I'm gonna take it a notch higher, right? I'm gonna say, create video instead.

[01:45:30] Right? And I'm gonna go ahead and upload a file.

[01:45:35] And go to my downloads, and...

[01:45:38] There you go, this is our PNG. I'm gonna attach this.

[01:45:43] I can choose different styles, right? I can choose different styles of creatives that I want to do this here.

[01:45:51] But I'm gonna create my own style, you don't necessarily have to, right? So I'm gonna say...

[01:45:57] Give it the pro, and say, hi, I've given you an attachment that shows you the invite for a party that I'm hosting.

[01:46:05] I want you to pick the style and the ethos, and create a video invite.

[01:46:10] with some really, really interesting elements, like, you know, the character in the TV popping out, the people getting a jump scare, and things like that. So get creative, and give me a very cool 16S9 video invite that I could use to send to my friends for this party.

[01:46:30] Now, again, this is very basic prompting, because we're doing it real time. So I'm gonna hit enter here, and I'm gonna wait for it to generate my video. But what is happening here?

[01:46:41] Right? From thinking about, oh, what do I do for Saturday night, to coming up with a couple of options, to then evaluating which option do we like.

[01:46:53] to then coming down and saying, okay, I want to visually understand this, right? I want to visually understand and figure this out, as to what is the, you know, kind of party I want to have. Then to go ahead and create an invite, and then to go ahead and convert that into video. We've done this in less than 10 minutes.

[01:47:11] I've taken those same videos, sorry, same images, and said, hey, take the style from that and go ahead and generate a video. And it'll be insane, right, if you're able to generate something cool.

[01:47:22] If it is good, right, I want all of you to commit to me saying, yes, I'm gonna go generate my own images and videos for my own use cases. Because until you use this, you won't feel the power of what AI is able to do.

[01:47:35] Right? The model that we are using in this case is, again, from this table of Google, it's called VO3.1, and we start talking in these models rather than saying, I use Gemini to create video. No. I used VO3.1 or VO3.2 Lite to create videos.

[01:47:51] Right? I use Gemini's Nano Banana 2 to create images.

[01:47:55] That is how you want to talk, and that shows that you understand the space, and whenever there's a new model, you're also aware that, okay, the model's upgraded, so I think I can do some, you know, even more cooler things with it now. Let's go back and check if the model's actually done

[01:48:11] you know, what, we've asked it to. So it said it's taking a couple of moments, so in the meanwhile, we can come back here and say.

[01:48:18] Okay, this is great, but I also want to figure out how the other invite would have looked. Can you go ahead and generate an invite for the other one as well?

[01:48:26] Right? Now, this is you literally...

[01:48:29] being spoiled with options. So you got one, it's gonna generate a second invite about the Office Mixer. Let's see what it comes up with.

[01:48:37] And we go back here.

[01:48:39] Let's refresh the page, sometimes the refresh works.

[01:48:43] And it did work. Magical, right? Little hacks that you get to see once you do this a lot.

[01:48:49] Folks, are you ready?

[01:48:51] Are you ready to watch what we've just created?

[01:48:55] Alright, I'm gonna try and make this immersive. Let's go ahead and play this.

[01:49:14] How cool is that, folks?

[01:49:19] It literally feels like it is...

[01:49:24] From an animation movie that we created for ourselves.

[01:49:29] Should we play it one last time?

[01:49:31] Let's play it one last time.

[01:49:43] There you go. So that was... Us using a silly little

[01:49:49] Prompt that began with planning a party.

[01:49:53] Imagine sending this to your friend at 2AM in the night.

[01:49:57] inviting them.

[01:49:59] to this party in this manner, right? I think we'll leave them with a jump scare, right? So this is...

[01:50:07] Gemini using...

[01:50:08] you know, VO3.1 to go ahead and generate video of this quality for us, and we, of course, can do a lot more. So it allows you 3 videos a day in the basic plan that they have.

[01:50:21] So go ahead and try this, and of course, there's a learning curve to get the kind of output that we are getting here, but you know that you can, right?

[01:50:30] Now let's go back and quickly check if the second invite is ready, right? Let's see.

[01:50:37] Oops! It's hallucinated. It's actually not done the second invite. Let me refresh that and see if...

[01:50:47] You know, that's something that is loaded up.

[01:50:50] Okay, no. It's completely missed the prompt because it was probably too busy making the video.

[01:50:56] We'll let it... we'll forgive it for now. But folks, that was us completely moving into an exercise of planning a party, and thank you for all of you for giving me feedback on which party and which kind of invites you like. Now, till now.

[01:51:10] We've worked how to work with a model, how to choose the right model, and how to actually make it get stuff for ourself.

[01:51:17] But... If...

[01:51:20] you want to make AI work exactly like how I'm doing it, then the way to do that is to build an AI toolkit.

[01:51:28] But before I go there, I want to check the pulse.

[01:51:31] How's it going so far?

[01:51:34] We are on a Saturday morning, We've moved a lot.

[01:51:39] There's probably an hour's work left. How's it going so far?

[01:51:47] Nice. Amazing. Love, love the energy. I think that, if you're excited until what's happened until now.

[01:51:56] I feel like what's about to come is really, really going to blow your mind.

[01:52:01] Right? So let's go ahead, the party's over, we've planned it out. We all know that Monday awaits us, right?

[01:52:09] So let's get serious.

[01:52:11] Shall we?

[01:52:13] Let's go ahead and build an AI toolkit for ourselves.

[01:52:19] Now, like I told you, I'm gonna try and cover as much surface area as I can.

[01:52:24] So we'll cover a few in productivity, in research, in slicing and dicing of data, in learning things, in marketing, and also definitely have some fun.

[01:52:32] But...

[01:52:34] let's also try and make serious work seem like fun, because we are here to learn, and I'm a believer that learning should and should be fun.

[01:52:42] Right? So the next demo is also going to be the demo for your break.

[01:52:48] So let's go ahead and try and figure this out. While we create, we're gonna take a break. So move a little, shake a little, stand up, and do things, because the next demo is us trying to generate a track.

[01:53:02] for ourselves.

[01:53:03] Right? So let's extend that party use case one little bit, and I'm gonna jump into a tool called as Suno.

[01:53:10] And Suno is a music generation AI tool, right? So let me just quickly find it. There you go. So this is the interface of Suno.

[01:53:20] And... I'm gonna go back to Gemini and say.

[01:53:26] Hey Gemini, I plan to generate a track for this party.

[01:53:30] I want it to be... And...

[01:53:33] spooky cinematic EDM track that begins up gradually, and then has a massive, screechy, Skrillex kind of a drop at the end.

[01:53:44] Can you give me two things? One is what I need to prompt in terms of the music technicality, so in BPM, tempo, music styles, and things like that. And the second part, give me 8 lines of lyrics.

[01:54:00] Among which 4 of them are, like, chorus and repetitive.

[01:54:03] You have all the context from the previous thread, so use it to generate this. Give it to me in a code block, so that I can easily paste it.

[01:54:11] There's a lot of layers in that prompt.

[01:54:13] But what I'm doing is using the same context that we've done to plan this party.

[01:54:20] to convert that into a music track, because that's one format we were left with, right?

[01:54:26] So we did image, we did text, we did video, so let's go ahead and get

[01:54:32] music as well, right? So I'm gonna copy this...

[01:54:35] you know, prompt that allows me to go ahead and give it the style first. So you can see style and lyrics are the two parts, so lyrics you paste here, and style you paste here. So I'm gonna paste the style here.

[01:54:48] And... I'm gonna go back to Gemini and copy the lyrics.

[01:54:54] And... oh my god, this is gonna be a scary track, I can sense it already. So go back to Suno.

[01:55:04] And paste this in the chat, where I used to know. There you go.

[01:55:09] So I paste the lyrics in here.

[01:55:11] Should we create, folks? And like ***** said, anyone who's wanting to take a break, go ahead and take a break. I've hid the word create.

[01:55:19] It's gonna generate a... maybe a 3-miner track for us.

[01:55:26] So let's go ahead and try and see if we can generate a track for ourselves for this particular session, right?

[01:55:37] I'm severely impressed with how quickly it started to generate tracks nowadays. So I've... I used to literally take a long break here, but now I don't think we have that privilege, because the models are getting so good.

[01:55:48] Right?

[01:55:50] So, Midnight Screams is the name of the track.

[01:55:53] I do feel like it's, it's gonna be intense, let's see what it comes up with.

[01:56:02] So what we did here, so far I'm seeing a few questions, is we used the same Gemini thread where we generated the party ideas to give us lyrics and styles, and we took those styles and lyrics and pasted that in Suno, and we said, hey Suno, go ahead and create a track.

[01:56:16] So it immediately generated a little thumbnail for itself, and it said it's gonna generate a spooky cinematic EDM that is heavy with dubstep. It's gonna start slow, and then go ahead and drop it, you know, drop... have a big drop towards the end.

[01:56:30] Now, for folks who are wondering about, is Suno free, you can see these credits at the top left corner.

[01:56:36] So I used 10 credits for this particular task. So you can kind of create 5 tracks per month for free, which I think is insane, because, you know, the kind of...

[01:56:47] The kind of stuff that you can create in Fitrax will let you decide if you want to invest more, but you can always go ahead and upgrade, and even buy more credits, so that, you know, you are able to create more and more if that is something that you need for your work.

[01:57:02] Right? So it's allowing me to play, but I think it's still generating. Let's give it maybe a...

[01:57:08] A minute more.

[01:57:10] Okay, it's actually allowing us to preview this. Let's see if it does that without, prompting us to buy stuff, right? Let me play this.

[01:57:32] Shadows creeping down the hall. Pizza boxes by the wall. Pretty insane, right?

[01:57:46] Fuzzy socks and glowing screams Settling for midnight screams.

[01:58:00] Eyes and face the front.

[01:58:06] Rise and face the frog.

[01:58:20] How was that, folks?

[01:58:23] That was pretty sick, right? That was...

[01:58:27] an amazing, amazing track. Like, I would love to listen to that, even if someone introduced that to me. Now, that is your 1-minute break, but let me also give you a 4-minute break here. I'm gonna play that.

[01:59:03] Folks, use this time to grab water, grab coffee, let's enjoy. All those who are at your desk, just move around, let's enjoy this trek.

[01:59:24] Jesus!

[01:59:34] Close your eyes and face the bride!

[01:59:42] Right up, bruh.

[01:59:54] Come to the horror!

[02:00:15] The couch is... Steps are gone.

[02:00:22] Someone saw a day.

[02:00:24] drawn alone.

[02:00:37] Reshat!

[02:00:48] Close your eyes and face the frog!

[02:00:55] Biden face the front!

[02:01:01] I've got it!

[02:01:07] Welcome to the Horror Night!

[02:01:27] If the food... Oh, it starts to cry.

[02:01:39] Well...

[02:02:00] Hey, Bob, bro!

[02:02:06] Rise and face the fries!

[02:02:18] Come to the Horror Night!

[02:02:30] Well done.

[02:02:42] Right.

[02:02:44] You can listen to this all day.

[02:02:48] was us... using...

[02:02:53] Suno to create a track, and a few questions about why did it create four tracks, that's their way to pitch how to upgrade. So they give the better model, which is the 5.5 preview.

[02:03:03] And they ask you to upgrade, but the other tracks are given to you for free, and you have 50 credits, so you can create 5 tracks for yourself. Now, that was Suno AI, and it couldn't create tracks for you. That's the first toolkit tool that I wanted to kind of show you.

[02:03:19] But...

[02:03:20] let's get into the serious stuff, right? So let's go ahead and break our work into these 5 different, categories of things that we want to do stuff with.

[02:03:30] So let's go ahead and jump into a bunch of tools that I'll be showing you. All of these tools I use at a daily level, and they've made my life completely different.

[02:03:43] Right? Because most of the things that I use AI for are actually things that I don't like doing, right? So if AI can go ahead and take care of things that I don't like doing.

[02:03:54] then I can focus my time on things that I like doing, and that's a good place to be, right? So that's where we'll get to today. The first serious tool that I want to show you is a lovely little tool called as WhisperFlow.

[02:04:06] I had a lot of you asking me, hey, you know, what is that tool, that voice-to-text tool that you're using, and, you know, you're just typing things. So you can see that I plan to generate a track for the party. All of the things that we've spoken so far are now visible on your screen. So this is Whisper Flow.

[02:04:22] And WhisperFlow is a voice-to-text tool that can do a lot of things for you.

[02:04:29] To just give you a sense of how much I use this...

[02:04:33] I have a longest streak of 45 days, I cannot live without, you know, using this in my days. But I type at about 75 to 80 words per minute, which is very, very fast, and I used to be very proud of it. But now, that number's shot up to 142 words per minute.

[02:04:51] Right? So that's almost twice what my speed is. I'm almost touching 300,000 words, right? And the errors that I say while I'm talking, you know, while we are talking, we keep saying, you know, error, make errors after that, and things like that.

[02:05:08] all of those things are also fixed, because your voice is hitting the microphone, then going to AI, getting cleaned up, and then going ahead and, you know, getting pasted there, right?

[02:05:22] you can see that, I've used this across 134 apps.

[02:05:28] You know, I've used about 9,500 AI prompts. For those who are wondering how much AI do you use, the answer is yes, a lot.

[02:05:38] Right? I've used it for personal messages, for tasks, for documents, for emails, for work, for every kind of task that is out there.

[02:05:47] Now, Whisper Flow is the technology that, you know, you just have one keyword on your keyboard, so for me, it's my right command button. I press that and I start talking into it, that's why you don't even see it, right? And it's one of my favorite apps, because what it does is it allows you to kind of go into

[02:06:05] your workflows without having to change the screen. For most AI elements, you keep going to ChatGPT, then come back, you know, you keep going to Gemini, then come back, like we were doing so far, right? But Whisperflow is kind of integrated in all of these, and that's why it's one of my favorite tools.

[02:06:21] The next one...

[02:06:22] That I want to introduce you to. And we'll move fast, because we have a lot to cover, so please get back to your seats and start paying attention to the screen. A lot of moving pieces, because we'll be seeing tools.

[02:06:33] But, these are tools that will help you take care of the dirty stuff for you, right? So, I'm sure not everyone enjoys meetings, right? I'm one of those people who would say, this meeting should have been an email.

[02:06:46] So, the next tool that I'm going to show you is, what if AI was there and it was capable of attending meetings on your behalf?

[02:06:55] or attending meetings along with you to help you with the various nuances that come with attending meetings. Now, what do we hate about meetings? A

[02:07:05] We have to join, and after 10 minutes, someone is going to begin talking because we're waiting for the other latecomers. B, someone has to take notes. If you forget, then that meeting is a waste of time. C, you have to break that down into action items, you know, go ahead and give it to different people, write to them. We always like that one person, you know, who goes ahead and makes those notes and proactively sends, hey, RV, these are your three action items, thank you so much for your time in the meeting, right? That'd be lovely if we can get people to do that.

[02:07:30] But, let me tell you that this lovely company called as Fireflies, which was in the space of AI way before it became popular, and now they are reaping the rewards, Fireflies

[02:07:42] can attend meetings along with you, on your behalf, and then translate that into everything that I just told you about.

[02:07:51] So let's jump into the tool.

[02:07:53] So, likes to know, I have a bunch of tools loaded here, and this one is Fireflies. For those, who ask the most asked questions, saying, are you using all pro versions? Right now, I'm on the free plan.

[02:08:03] And free plan allows you 800 minutes.

[02:08:06] Which is about... if you take 40 minutes on average, you can do 20 minutes per month.

[02:08:12] for free, and that's not a bad start, right? Like, for getting to know the benefit. And it does transcription in all languages, so you can speak in Hindi, English, Telugu, whichever language you're having your meetings in. It'll do real-time notes and live transcriptions, and it'll give you all of that information back in your email, or in your dashboard. Now, let me jump to the dashboard.

[02:08:33] So this is how the dashboard looks like. This month, we are on the last day, so I've already finished my quota. But you can see that I've attended a bunch of meetings where Five Flies was a part of this along with me, right? And very, very recently.

[02:08:46] I attended a meeting for building a CRM for an offline retail company.

[02:08:52] Now, if I... I attended this alone, but I had Fireflies join me so that I can basically use the information later if I have to pitch to them, right? Because this is a scoping and budget discussion.

[02:09:04] The beauty of this is, I can just say, ask Fred, this little robot that is here, and I can say.

[02:09:10] Hague.

[02:09:11] What are the things that I need to check with my partner, Akshay?

[02:09:18] that I'd mentioned that I would in this meeting.

[02:09:21] Right? So I mentioned that I need to get full clarity from my partner, who's helping me build this out.

[02:09:28] And it can tell you, saying, hey, you mentioned Akshay when you were talking about the coupon code system that you will build. You mentioned Akshay when you wanted to understand Microsoft AX capabilities. You mentioned Akshay when you were talking about project timeline and resource planning, right? So it's given you all those

[02:09:44] You know, specific answers.

[02:09:47] You can also say.

[02:09:49] I feel like I'm ready to pitch this. What do you think should be my next steps, so that I don't surprise them with the pitch?

[02:10:01] Right? So it says, based on the meeting flow, it says, connect with Akshay, prepare the proposal document. Early next week, share the draft with Harvey privately, align with Jakub, who's another stakeholder, and before be you present to the main GM, frame around the pain point.

[02:10:15] plan the presentation meeting, and then go ahead and do it in a way that it's no surprises, and people can be ready for your, you know, particular use case, right? So this is a meeting that ran about... ran... that ran for about 90 minutes, and I could get

[02:10:32] a lot of the notes very, very immediately, you know, ready and available. You also have some preset prompts called as skills. So it says, can you convert this into to-dos, for example, right? So I say to-dos, and I can click on this.

[02:10:48] And it's gonna convert this entire meeting into a bunch of to-dos. See this?

[02:10:54] So there's data cleaning and validation.

[02:10:58] the description, the key objectives, and then there's an owner that says, Syed should be owning this. There's facilitate system access, and this should be Loganadin.

[02:11:07] Right?

[02:11:08] Then there is audit the tools, RV, which is me. Develop phase CRM project proposal, which should also be me, right? So a bunch of things that it has gone ahead and assigned based is the meeting notes. So this is why I love Five Flags, because it takes up the dirty work, and it actually makes it very, very interesting for us.

[02:11:27] So that you can just focus on the good stuff, right? So if I know what actions to do, I can just jump into building right away, and that is what excites me the most about this tool.

[02:11:35] Nope.

[02:11:37] a lot of information is coming your way, is going to come your way. I see a lot of people asking for videos of this, you know, session as well, because you want to consume that information, right? You want to consume and you want to become better, you want to consume and you want to learn, you want to read and you want to learn, but the amount of information is just growing like a mountain.

[02:11:57] Now, how do you chisel into this mountain without feeling overwhelmed, right? If you have to climb the mountain every day, you'll be really tired, but if you do climb, you'll be really strong, right? So there's a good trade-off to this.

[02:12:09] But can you actually build a nice ropeway for yourself so that you can go up and down the mountain really quickly without getting tired? That'll be nice, right?

[02:12:18] So let's go ahead and see how we can do that. This is a lovely tool, this should be in everyone's stack.

[02:12:24] It's called as Notebook LM, and it's a tool by Google.

[02:12:29] It was made for researchers, but everyone can use it.

[02:12:33] So let me go ahead and show you how Notebook LM works.

[02:12:38] So Notebook LM looks like this. For every topic that you want to learn, you can create a new notebook, kind of like how we do with books.

[02:12:46] It also gives you a few ready notebooks that you can pick out of, so you can choose one of these, say, for example, how to study is a notebook. They've given you tons of stuff here, ready, right?

[02:13:00] And it's got a 3-pane view.

[02:13:03] So you can basically choose your sources on the left, all the information that you want to upload. You can, you know, use PDFs, use YouTube videos, use all kinds of stuff, right? And it'll instantly convert that into a chat interface. Like, how you attach things to ChatGPT, just that

[02:13:20] Here, you can just attach it once and forget, and you can keep coming back to this notebook. Very, very useful for topics that you want to learn about, right? For example.

[02:13:28] Today, we were talking a lot about mastering AI prompts, right? We spoke about what are some good prompts and things like that. Now, I've added a few of my materials. I've added, like, a 2026 guide, a 2025 guide, so these are YouTube videos.

[02:13:43] I've added some text, I've added some... a PDF that talks about, you know, what kind of prompting techniques, and I've added one of my session slides that I do for, you know, advanced AI workflows. Now, I can come here and start chatting with this immediately, right? I can say.

[02:13:59] hey, if there was one prompting technique that I needed to learn to use for my generic use cases today, which one would it be?

[02:14:11] Right, so it's gonna read through these material that we've given on the left.

[02:14:15] And it's going to start giving you an answer specifically for your sources only, not the generic stuff that you get outside.

[02:14:22] Now, while it is preparing that, you can see on the right, you have an option called Studio, and this is my favorite, because

[02:14:29] What is happening here is we are all different kinds of learners, right? Some people like interactive learning, some people like visual learning, some people like learning with flashcards, some people like reading reports to learn. All of these are possible for you to convert any, you know, individual source into a format that you like.

[02:14:48] One of my favorites is actually this audio overview that you see here.

[02:14:53] Because I drive a lot, and whenever I feel like I'm learning a new topic, I used to listen to podcasts. But now, I create my own podcasts for myself.

[02:15:03] Let me show you how. So, I've clicked on this before so that we save some time, and you can see that it's converted this audio overview here.

[02:15:11] And I can just click on play, And you will notice that

[02:15:18] it'll allow you to start listening to a person. The creator of that masterclass

[02:15:22] He actually talks about his own transformation. Yeah. He spent 10 years just kind of swinging on this pendulum between being super excited by new tech, and then just being a, quote, frustrated guy at work. Overwhelmed by the hype, basically. Completely. But then, in just 10 weeks, simply by changing the mechanical way he talked to AI, he built free.

[02:15:41] totally distinct, functional AI tools. So imagine is an astonishing volume of output for 10 weeks. I mean, he built Regality AI, which helps banks navigate complex financial regulations. Let me just refresh. So you can see that it's actually giving my profile, which is interesting, because it's taken that profile from my presentation here.

[02:16:01] Right?

[02:16:02] So let's...

[02:16:03] So imagine you just hired, like, the absolute smartest intern on the entire planet. I mean, they've read every book ever published, they know every single code and language, and they can synthesize a 100-page marketing brief in, what, 3 seconds flat? Right, but the catch is... There's always a catch. Yeah, there's a huge catch.

[02:16:21] The problem is, this intern has zero common sense. Like, absolutely no lived experience.

[02:16:26] What you have to notice is, the people that we are listening to, or talking to soon, are people that do not exist. These are two large language models talking to each other.

[02:16:37] How crazy is that? They've converted my material that I've created a presentation out of into a conversation that I can participate in.

[02:16:48] And they process every single word you say with this rigid, literal... Oh, like a genie. Exactly. If you casually tell them, oh, wait, someone wants to join, hey, go for it! Hey there.

[02:17:01] This is Raghuvir, the creator of the presentation.

[02:17:06] Let's see if it responds.

[02:17:15] Hey there, this is Raghubir, the creator of the presentation.

[02:17:24] Okay, looks like it's a little bit buggy. We'll give it a moment to see if it responds.

[02:17:37] Raguvir. Oh, wow, it is an absolute honor to have the crew. Oh, I just started responding. So imagine you just hired, like, the absolute... So you can actually participate with AI in the material that you've wanted to learn.

[02:17:51] And the best kind of learning is when you're trying to express it or teach it to someone, right? So you can actually have a real-time debate with the material that you've chosen, and how incredible is that?

[02:18:00] You can also have mind maps, so if you're a visual learning learner like me, so I'm like, okay, I want to learn advanced prompting techniques, there are some foundational concepts, there are some core crafting strategies, there are some frameworks, and there are some verification techniques, and some specific techniques towards the end, which are advanced.

[02:18:17] If I want to learn the foundational concepts, I just click on this, and it says, what is prompt engineering? I begin with the basics. Why are advanced techniques needed? What are the model differences between slow models, fast models, all that stuff that we spoke about?

[02:18:30] At any point in time, I can go and try and understand this deeper, and you can see that learning a concept in this manner is so much more efficient. What is prompt engineering? It shapes AI's thinking, it makes the intent unmistakably clear, and it's crafting precise, descriptive instructions.

[02:18:47] Right? Pretty cool. I can say, okay, how is it making intent unmistakably clear? I click on that.

[02:18:53] And it immediately goes back to the chat window and explains that to me. So this is like you're solving a problem, and you have a teacher sitting beside you, ready to answer your questions.

[02:19:03] How cool is that, right? So if you're learning any topic, especially if you're learning a topic like AI, which is changing every day, which is getting tons of new information every day.

[02:19:11] Pick your favorite YouTube creators, pick your favorite writers, pick your favorite, you know, decks and PDFs, just go ahead and dump that into a source, and you can create a notebook for yourself that can really, really shape how you learn.

[02:19:24] So that was the third demo of the serious tools that we are covering, and that was Notebook LM.

[02:19:30] And it's incredibly powerful, like I've showed you some of the use cases, right?

[02:19:35] Let's move on. Let's say you wanted to do research about a company that you wanted to join, and then you're trying to figure out, you know, what do I need to

[02:19:46] know about this company, so that I can basically get more details. Now, we used to use Perplexity for this, but Perplexity has kind of made this a paid feature, so you still get this on ChatGPT. I'm going to show you where it shows up on Publicity. So, it shows up here.

[02:20:03] as Deep Research, but you pick any major model. So, for example, in Google, in Gemini, you have Deep Research here.

[02:20:11] In Claude, you will also have deep research in the additional element, so you can enable research and it'll research for you.

[02:20:19] And let's also jump to one last favorite of ours, which is ChatGPT, where you can also enable deep research for something like this, right? So if I were to use ChatGPT for this, I could go ahead and mention

[02:20:34] Hey.

[02:20:35] I'm looking at preparing for an interview for AI product manager jobs.

[02:20:43] Go ahead and help me find out What should be my roadmap?

[02:20:49] to prepare for these interviews. What are some companies that I should target? I'm looking for remote roles, because I'd like to be in India, and that is important for me.

[02:20:59] I'm looking for companies that have great culture, so I don't want to join a toxic environment. I'm also looking for companies that have some really interesting and innovative products, so that I can be a part of the overall AI story that the world is seeing right now.

[02:21:15] Let's see how that prompt gets converted. Right, so that's our prompt for today, and we say deep research, and I'm gonna copy this, and I'm gonna give it to multiple platforms, and just see which one gets us the fastest result, right? So I'm gonna come to Claude, and paste this here.

[02:21:30] maybe use... Haiku for this one, just to get it fast.

[02:21:36] And I'm gonna come to Gemini, I'm gonna paste this one, I'm gonna Tools, I will select Research, and I'll go ahead. So this is, again, us literally giving the same task to multiple models, so that, you know, you can go ahead and get different views.

[02:21:54] There you go. So it says, what is your current PM experience level? So, I'm a senior PM, ChatGPT-like creative tools, what interview area should the roadmap prioritize?

[02:22:05] let's go with product strategy and execution. So it'll now create a plan for ourselves. It's asking, what tools will you give me so that I can search and stuff?

[02:22:17] And it's gonna set up your research space. Let's see what ChatGPT is doing. Oh, sorry, Gemini is doing. Gemini has also come up with a plan, so I say start research, and it begins. Same with ChatGPT, where are you? There you go.

[02:22:29] So I come here, okay, maybe there's a second window. Let me see.

[02:22:33] There you go. So it's already come up with a plan, and it's starting, right?

[02:22:38] So, it's saying compile core skills, identify remote-friendly companies, gather role-specific interview questions, collect resources for skill building and mock interview practice, prioritize companies, and create a tailored application prep plan.

[02:22:52] This is like you hiring multiple agencies to help you land a job.

[02:22:57] Right? If you're worried about AI creating layoffs.

[02:23:01] You should also know that AI is also creating jobs, and if you plan well, you can actually take advantage of this overall situation that is out there.

[02:23:12] Let me see if Gemini's begun. So, Gemini started thinking, so it's mapping what competencies are needed, cultural alignment. I love this part, because I don't think we can ever go through so many pages so quickly, but AI can, right? So AI's done, what, 3 into 10, maybe 30 pages already?

[02:23:30] Another 3 into 10, maybe 60 pages now.

[02:23:33] More websites, oh my god, this is just... yeah, this is just insane, right?

[02:23:39] Let's see what Claude is up to. Claude has taken 1 minute, it's created a research plan, and it's gone through 295 sources, folks.

[02:23:48] How crazy is this? Claude's doing 295 sources and counting. It's going through different, you know, roles that are available, different creative tool companies that are there.

[02:23:58] Wow. It's identified a few elements. It's looking at Hyderabad, because that is where I'm based out of.

[02:24:05] Oh, now it's gone up to 405 sources, so this is... this is going to be an insane research project.

[02:24:10] Let me go back to ChatGPT. So, ChatGPT is giving us a timeline.

[02:24:14] We'll come back to these, because you can see that heavy tasks like this will take time.

[02:24:19] But we'll come back to this in a short while, right?

[02:24:24] Now... Assume that we get some good, suggestions from these research projects.

[02:24:32] And you want to prepare for one of these companies, right? Let's say, you know, we saw Spotify in that list there, and Spotify's a lovely company, I love music, so I want to be a PM, an AI PM at Spotify.

[02:24:44] If I want to prepare for a tough conversation like this, or an interview like this, how can I do that? So, a tough conversation would be me navigating through a hike or a performance review internally, it's the season for that, or...

[02:24:58] I want to prepare for my next gig, which is probably at a company like Spotify, right? So for this.

[02:25:04] I can go ahead and start using voice with ChatGPT. Now, so far, you saw WhisperFlow, which is voice-to-text, but all these major AI models also give you voice-to-voice, right?

[02:25:16] Which means they respond back to you in voice. We can use any of these, you know, current providers, but I'm gonna use ChatGPT because they have the most generous free plan.

[02:25:26] So I'm not on a special plan with ChatGPT, but this... these two little icons here...

[02:25:34] Right? They are very, very powerful, but they get used very little. So as a pro user from today, you all have to tell me that you will be using these things. So I can use voice, or I can use dictation. Dictation does what Whisperflow does, and voice does respond to us back in voice. Let's go ahead and start it.

[02:26:05] Hey there, can you hear me?

[02:26:09] Yep, I can hear you loud and clear. What's up? Alright, I'm trying to prepare for an upcoming interview, and I need your help.

[02:26:20] Of course, happy to help. What kind of interview is it, and what do you want to focus on? I want to focus on an AI product manager interview at a...

[02:26:29] fun product company like Spotify.

[02:26:35] Got it. For an AI product manager interview at a company like Spotify, they'll likely want to see your understanding of AI technologies, your ability to translate business goals into product features, and your experience with user-centric design.

[02:26:49] Do you want to practice answering some typical questions, or focus on a specific area like AI strategy, product roadmaps, or dealing with cross-functional teams? Let's do this. I want us to rehearse a real interview scenario. I don't want you to explain or interrupt the actual rehearsal process.

[02:27:06] I just wanted to take the role of a grueling, you know, hard-ass interviewer.

[02:27:11] And just begin with asking me some questions and responding back like the interviewer.

[02:27:20] Alright, let's jump right in.

[02:27:22] Interviewer. So, can you walk me through a recent product you managed that involved AI? What challenges did you face, and how did you overcome them? I was the founder of a company called Happy Eaters, which...

[02:27:35] generated recipes for toddlers to help parents quickly manage eating as a ritual with their kids, and introduce them to good foods. And we had AI running on the front end and the back end. On the front end, it generated recipes, bases the kind of

[02:27:52] Inputs that the parent would give, and at the back end, it would understand what patterns are being followed by the parent, and give them a list of veggies that they should be introducing in their future food, so that the kid is not going to be a picky eater.

[02:28:10] Interesting. How did you measure the success of this AI-driven feature?

[02:28:15] Can you give a specific example of a key metric you tracked, and what actions you took based on the data? Yeah, so one of the most important features in this entire flow was a feature called What's in Your Fridge.

[02:28:28] So I could just click the picture of my fridge, and it's going to recommend a few recipes. So it used to use computer vision, understand what's in the image, understand the ingredients, and then create recipes out of that.

[02:28:39] One of the key metrics that we would track is how many people are being retained by this feature, how is the everyday usage looking like for this feature.

[02:28:48] And whether it needs some nudges during mealtimes to get that usage to...

[02:28:54] be increased in case someone is dropping off after trying it once, or it failed and they had a bad session and they're dropping off. So those are some metrics we would track and then act upon that using notifications and nudges.

[02:29:11] Interesting.

[02:29:12] When you noticed users dropping off after a bad session, what specific steps did you take to improve the AI's performance or the user experience?

[02:29:21] Can you give an example of a challenge you... So you can get the drift, right? I'm gonna pause it here, because this can go on and on, but you can see that even I was fumbling. It's a topic that I know deeply, but when put in an interview scenario.

[02:29:35] You will often be in a place where you will feel under pressure, and rehearsing with a voice agent is incredibly relieving, because you're so much more prepared when you're in the actual scenario.

[02:29:48] And AI doesn't get tired, right? You can open 10 sessions like this and keep preparing and keep making notes and keep getting better at your interview, you know, process. Let's go ahead and quickly check if the research project is done.

[02:30:03] So it says it's completed its research, let me just refresh. Sometimes Gemini can be buggy.

[02:30:09] There you go. So you have your research, a strategic analysis and readiness framework for the AI product management transition in India.

[02:30:17] It says it defines the role, defines the core competencies, preparation roadmap, so phase one, get the technical and theoretical foundation, the adaptation of product frameworks, strategy company and market research, tactical mock interviews, we just did that, right?

[02:30:32] just go ahead and do the tactical mock interviews. Figure out which are the companies that have good presence in India.

[02:30:39] What are the startups that are killing it in India?

[02:30:42] And then go ahead and identify which are the ones that have non-toxic environments.

[02:30:48] Wow.

[02:30:49] This is insane. And it gives you the reference of everything that it used in the report. It'll also tell you what did I read but did not use in the report.

[02:31:00] How cool is that, folks? Pretty insane, right?

[02:31:03] So you have your Claude doing this here. Okay, let me just see where did we give it to Claude? There.

[02:31:10] Or here, yeah. So Claude is still doing it, it's 9 minutes, and it's still gathering.

[02:31:15] We also gave it to ChatGPT, so let's check if ChatGPT is done. Okay, ChatGPT is done, and it's actually giving you a full-blown report.

[02:31:24] Wow.

[02:31:26] It's given you more companies and their salaries.

[02:31:31] It's giving you case studies and prompts.

[02:31:34] what your application strategy should be. I actually think ChatGPT did a good job.

[02:31:40] Right? What are the things that you need to manage? Oof.

[02:31:44] The kind of preparation that you can do in just minutes these days is insane, right? So this, folks, is you basically using the power of deep research to getting your stuff done, and then using voice to help you prepare for interviews.

[02:32:02] Now... Let's go on the positive note. We've... Prepared well.

[02:32:08] not many people are doing this. You'll be in the top 1% if you do this. You've cracked the interview, but the new role needs new skills. But there's no time, right? Because...

[02:32:18] How many of you joined a new job, and they were like, okay, this is everything you need to learn, and you get a folder and a lot of access to things, right?

[02:32:25] This is usually the place, the case with a lot of jobs that we join today. Now, if they throw a dashboard like this at you and say, okay, let's get started, let's get familiar with all of this, and we'll have a meeting with the CEO in a couple of days.

[02:32:39] you can actually use AI to convert something complex as this, and build a simplified version of it for yourself.

[02:32:49] Building things was... was never this easy. So I'm gonna literally screen grab this almost pixelated piece of screenshot.

[02:32:58] Right? I'm gonna go back.

[02:33:00] And for work like this, which is using numbers, I usually prefer Claude. I start a new thread.

[02:33:06] I paste this here.

[02:33:07] And I see... Hey, Claude.

[02:33:11] I've just joined this new company, and I have to prepare for a CEO's meeting in 3 days.

[02:33:16] Can you help me understand the data that is there within this?

[02:33:26] It's gonna read that screenshot, and he's gonna start responding to you.

[02:33:33] So it says, hey, this is your cash position risk, this is the working capital, this is the aging risk, this is the debt profile, a lot of detail within that. So it says, lead with your accounts receivable collection risk and working capital compression.

[02:33:47] And then go ahead. Now I can say, hey, but I've joined the marketing team, can you give me something relevant to the marketing team instead?

[02:33:57] So the role allocation and the prompting matters a lot, right? So now we'll completely flip and start looking at

[02:34:04] How will a marketer look at this?

[02:34:07] Right? And it's come to a point where I can literally just say, hey.

[02:34:12] I can present a one-slider to the CEO. Can you just go ahead and create a PowerPoint presentation for my CEO meeting with these topics? Keep it brisk, keep it very, very simple, keep it high impact.

[02:34:31] And... It can now go ahead and pick a PPTX skill.

[02:34:38] To generate a presentation for us real time.

[02:34:42] It'll write code on our behalf, like, how we would go and draw blocks and things like that.

[02:34:48] In this case, Claude would go ahead and get an agent that knows how to create presentations.

[02:34:53] you know, write a script, so when you click this, you will see that. So it's actually writing code. It's telling this is the color, this is the font, and so on and so forth.

[02:35:03] Take the presentation inputs from your previous prompt, and then go ahead and present, that for you as an image, so that you can verify it.

[02:35:12] Right?

[02:35:15] We can wait for it, let's give it maybe 30 seconds, because it's come to the last step. There you go.

[02:35:28] So while it's loading, I could download this real quick.

[02:35:31] And... I just go ahead and open this.

[02:35:37] There you go, folks. So it's done a one-pager, and you can basically give it feedback, saying, oh, the font is overlapping and things like that, and boom.

[02:35:46] it's gonna create a presentation for you. In less than 2 minutes, we went from a complex dashboard like this to presenting... to the... being prepared to actually present to a CEO, and that's incredible, right? That is the power of tools like Claude that you have today.

[02:36:01] Now, we've done a lot of the serious work, but marketing is also fun, product is also fun, you know, getting

[02:36:08] your creative work done, AI can help you with that as well.

[02:36:13] Now, a lot of us who are there in this space struggle with product photoshoots, because they take time. You have to, you know, get your location right, get your lighting right, get a lot of other things right.

[02:36:24] And for this, I have a favorite tool of mine called as foot.ai.

[02:36:30] Now, Ford.ai.

[02:36:31] actually helps you do multiple things within the field of marketing. So it has, you know, background remover, background replacer, object replacer, object remover. You can go explore the tool, it's incredible. Pani will share notes with you at the end that you can get access to.

[02:36:48] But what I want all of you to see is the graphic lab here.

[02:36:53] Now, the Graphic Lab can actually generate product photoshoots for you, right? So let me just skip, and you can see that there's a tab for a product photoshoot, and it's giving me options, right? I can do demos with a shoe, I can maybe do demos with a bag like this.

[02:37:11] So I choose the bag.

[02:37:13] Right, wait for it to load up.

[02:37:17] And here's where I can describe a prompt.

[02:37:20] Hey.

[02:37:21] This is a premium product, like.

[02:37:24] one with Louis Vuitton, but made in India.

[02:37:28] And that is the brand, that I want us to impersonate. Oh, this is actually a speaker, my bad. Let's go ahead and put the Sonos speaker in different places. So, hey, I want you to make this product positioned as the perfect

[02:37:43] office chill speaker. So go ahead and place this in various office and office party environments, and give me a few...

[02:37:52] Very nice... Add suitable creatives that you've generated.

[02:38:00] So you need to imagine where you want to do this, right? And you just go ahead and hit generate.

[02:38:08] It's gonna take some time, because obviously generation of images, like you noticed earlier, will take some time, but what it's gonna do is it's gonna take the product.

[02:38:17] imagine the backgrounds, merge both of them, and give you, you know, an output like this. Let's see if I can access some of the past work that we've done. So it's, you know, we minimized it, and it's happening here.

[02:38:29] Let me go back and see if I can go to my library.

[02:38:39] So... The last time we did this, we generated some ads.

[02:38:43] And you can see that it's done a sale campaign of 50% off.

[02:38:48] And it's generated that for us, right?

[02:38:53] Let's see if I have... My photoshoot.

[02:38:59] ads as well.

[02:39:02] Let's see.

[02:39:08] There we go. We have a few that we've generated in the past.

[02:39:11] Wait for them to load up.

[02:39:14] So we've done cupcakes once in the past, we've done headphones in the past. So you can see that how...

[02:39:20] All of these various products can be presented in extremely different scenarios with simple prompts.

[02:39:29] Let's give it a moment... there you go. So, it's taken a cupcake and presented it in a 5-star, you know, scenario for us, because we've asked it to be present in, on a plate with very, very creative, you know, garnishing and plating, and look at how beautifully it's done a job of that. It just kind of merges the vibe, right? So, if you're a bakery.

[02:39:49] You're trying to build a bake shop.

[02:39:50] This gives you an idea of how creative you can get with this.

[02:39:54] Let's see some of the other things that are loading. This is a...

[02:39:58] tool that tries to do a lot, so I don't blame them that they are a little bit slow. But Fort.ai is the name of the tool, and you are able to, you know, go ahead and develop, creatives, develop ads, develop, you know, product photoshoots with this. You can do a lot, basically, right?

[02:40:15] Now...

[02:40:17] The next thing I want to run y'all through is... if there's one thing that has become difficult in the world of AI,

[02:40:24] I would say that is building distribution.

[02:40:27] And...

[02:40:30] more... the more content creation becomes easier, the harder it is for you to, kind of get attention of people, right? So, one thing that AI has actually made difficult is created more creators, and that means there's more competition for you if you want to

[02:40:46] you know, be out there in the market. Now, how do we solve for this? We have some very interesting tools that will help you grow your personal brand, because that is starting to matter a lot. You know, jobs are being hired by people who create their own personal brands.

[02:41:01] I want all of you to commit to growing your LinkedIn by spending 5 minutes a day using this next AI tool that I'm gonna show you.

[02:41:10] We've all committed to this, right? In the past, we've said, okay, I'm gonna post regularly, but then we kind of fade off from that, and we forget about it, right? So the tool is called as SuperGrow. I'm gonna kind of drag this in. It looks like this.

[02:41:25] And its main goal is to make you write posts. So you can see this on the left top corner, you can click on write post, and it says, do you want to write manually?

[02:41:33] Do you want to do a podcast kind of a setup? Do you want to create carousal? What do you want to do, right? So I say I want to repurpose from a YouTube or a blog or a PDF.

[02:41:42] Right? And... let's go ahead and choose a YouTube video.

[02:41:50] I'm gonna go to YouTube.

[02:41:52] Right? And open...

[02:41:57] maybe something around, let's see, what do I want to get? So let me get something around...

[02:42:06] AI prompting strategies... underrated.

[02:42:12] 2026, that's a good keyword.

[02:42:15] Let's see if there's, you know, anyone who's coming up with something.

[02:42:20] Okay. There's, someone who summarized the Google's video, which is 9 hours long in 20 minutes, so let's take this.

[02:42:28] I'm gonna share, I'm gonna copy this link of YouTube, close this, and come here and paste it.

[02:42:34] and say, my style, like, I can create a style of my own. So, Webb is a very popular guy on LinkedIn, he's also the founder of this company where you're attending, and I can say, hey, convert that YouTube video into

[02:42:49] the top 3 things that you can learn that will completely change your trajectory in the world of AI.

[02:42:56] Right? And I click on Generate.

[02:42:59] It's gonna go through that YouTube video, read the 20 minutes of that, and then start generating content out of that. Let's see what it comes up with.

[02:43:10] Now, we said we're gonna spend 5 minutes, we began this exercise at 12.29, it's been 2 minutes, let's see if we can meet our 5-minute target.

[02:43:25] And in the meanwhile, let me also talk about some of the other features that they have on the site. So, you can not just generate posts, but you can also generate carousals, right? So, it's understood by Bob Style, and it said, Google just dropped a 9-hour prompting engineering course, and I compressed it into 3 game-changing frameworks that'll make you an AI power user overnight.

[02:43:45] Solid start, right? Most people are still typing, write me a blog post and wondering why AI gives garbage output. Here are three frameworks from the Google's course that actually change how you use AI. Lovely, super powerful, and very close to the prompting structure that we learned today.

[02:44:01] Now I can just go ahead and make this even better by clicking on Generate Carusal.

[02:44:07] And it's gonna ask me to pick a style. I like this tweeting style, right? I'm gonna say, create a 5-slider or a 6 slider for me.

[02:44:16] just go ahead.

[02:44:18] And press Create.

[02:44:20] We're at the third minute mark now. We've already created a text slide, so we've already beat our expectation.

[02:44:27] now let's give it a minute more to start generating images out of this, right? How cool is that? So I can, you know, quickly delete this profile pic, write my own, I can say, you know, my handle is PicturePoet.

[02:44:40] And you can see that it's changed that here, and I'll say Raghuvi Nestelaf.

[02:44:45] Or people know me as RV, let's keep it simple, right? And I upload a profile image from my computer.

[02:44:52] And I should be ready to go.

[02:44:55] So, let me do this... Okay, I have a nice memoji here.

[02:45:02] Let's use this image.

[02:45:11] One more minute to go, folks, and hopefully it'll look close to final.

[02:45:22] Funnily enough, the image part is the one that is taking the most amount of time.

[02:45:26] Okay, the image is uploaded, it should soon show up here, there you go. You can actually see your 6 different slides.

[02:45:34] How cool is that? Bottom line, prompting is just designing conversations, not typing requests. You just go ahead and save, and you publish it to LinkedIn, and it's gonna post on your behalf, and in less than 5 minutes, you went from creating

[02:45:49] a full post from a YouTube video that's 20 minutes long, and now we are able to customize it to your style, present it in your fashion, and yeah, boom, it's ready to go, right? It's saved, and you can draft it, you can kind of push it to later. It's incredibly, incredibly powerful.

[02:46:08] So that, folks, was Supergro.

[02:46:11] And now that we are talking of LinkedIn.

[02:46:14] the one use case that we all spend a lot of time in LinkedIn for is actually, trying to understand

[02:46:22] Who are in my network?

[02:46:24] Right? Who are in my network, and how can I make the most of my network? If you're looking for a job, you need a network. If you're looking for closing a deal, you need a network. If you're building a company, you need a network.

[02:46:35] But...

[02:46:36] you know, I'm teaching these classes, I end up, you know, going to events, and I notice that there's tons of people that are added, right? We don't know everyone in our LinkedIn network.

[02:46:45] And for that, there's a beautiful tool called as Happenstance. Now, Happenstance is an AI layer on top of your network.

[02:46:55] That's what it is. So you can actually search for people.

[02:46:59] Right? That... that you worked with.

[02:47:05] And it's gonna ask you this one question, saying, whom for?

[02:47:09] So I can say that, say, for example, for Regality AI, the company that I was building, I'm looking for chartered accountants, finance professionals, anyone who's in the leadership in finance teams.

[02:47:23] To try my new product that's in the space of foreign exchange management for companies.

[02:47:32] Right?

[02:47:33] And I'm gonna hit... Yes.

[02:47:36] And what it'll do is... it's got all my, you know, connectors with respect to my Twitter.

[02:47:43] Where it has, you know, 2,000 odd connections. I've uploaded my contacts, it's got my Gmail, it's got my calendar. It's also got LinkedIn, where it's already filtered and said, out of my 30,000, you know, followers, I can pick 1,700 who are relevant to this ask.

[02:47:58] And then it starts, you know, going ahead. It's currently a chartered accountant, it's currently a finance professional, so again.

[02:48:04] Your little query here.

[02:48:06] is converted into mathematics. So it's writing code like this, saying, look for title, like Chartered Accountants, like CAs, like CPAs.

[02:48:17] then look for financial, Treasury, accounting, accountant, controller, auditor, all possible ways in which you would search if you were doing this task, but it's not easy for us to actually imagine all of this, right? So we'll just compress the thinking.

[02:48:31] And you will see that it starts giving you a list of people.

[02:48:36] that you should go ahead and reach out to. So there's Tej Anumas, who's heading finance at Bitexil. There's Aishwarya Deshpande, who's working at Pranitya Wealth LLP. There's Gregory, who's Director of Finance at APAC for a company called Diversified. So you can see that these are the people that I would, you know, try and reach out to, and these are in my network.

[02:48:55] Right? I can kind of sort by score, or sort by chartered accountant. Score is basically the highest amount of relevance, because I know this person directly, it's saying, hey, this guy's also in your Google contacts, you can just call him and ask him to try your product.

[02:49:08] How cool is that, right? So it's combining all your sources. So, if you've built a network on Twitter, built a network on LinkedIn, built a network in Gmail, built a network in your personal contacts, you basically maintain all of that in one place, and you try and maximize what your network can do for you.

[02:49:26] So that's...

[02:49:28] for all the people searching for jobs, or builders building new things and looking for audiences, most importantly for business development folks. The tool is called as Happenstance.

[02:49:41] And with that, we are coming to the last couple of demos that we have today. This one's one of my favorites, because it works with numbers, and it's one of those tools that is like Whisper Flow, because

[02:49:54] We love working in Excel sheets, right? We love working in Google Sheets. What if we don't have to go out of Excel or Google Sheets? Just stay there and continue to work.

[02:50:04] while still getting the advantage of AI, right? Don't copy-paste something in ChatGPT and come back. For that, there's a lovely little tool called as numerous.ai, and Numerous.ai is existing inside your Google Sheets and your Excel sheet. So I have one sheet ready for us.

[02:50:25] Now, this is data of my company, Happy Eaters. We've mentioned it a couple of times in this particular session. Now, Happy Eaters.

[02:50:33] is an app for parenting and helping with food for your kids, right? I have a bunch of parents here, 20-odd parents, that have given me ratings on my Google Play Store, so some have given 5 stars, some have given 1 stars, and they've given me reviews, right? They like it, they don't like it, they hate it, all kinds of reviews are here.

[02:50:53] Now, if I were to go through so much text.

[02:50:56] I'm sure a lot of you might be feeling overwhelmed, saying, oh my god, this guy's opened another big sheet, right?

[02:51:02] But...

[02:51:03] I want you all to focus on this formula bar for a moment. So I can call numerous AI,

[02:51:09] By adding it as an extension.

[02:51:11] So you can see that it is there in my extensions. You just added, like, a Chrome extension.

[02:51:16] And once you click on that, Numerous AI shows up here.

[02:51:20] you can type NAI, and you can use it literally like other formulae that you use. Like, how you do addition, or, you know, you're processing averages, or you're creating charts. You can just enter NAI, and I say.

[02:51:34] Classify the sentiment of this review in the cell C2, which is highlighted, as one of the following, positive, negative, or neutral.

[02:51:43] And instantly, I can take this and drag it all the way to the bottom. It says it's loading.

[02:51:50] And you can see that it's read this review on our behalf, and it's told us, saying, hey, these are positive, these are negative, and these are neutral.

[02:51:57] Where is this super useful? Every once in a while, there will be a review where you've gotten a 5-star.

[02:52:04] But the review's actually negative, because people make mistakes, or people are confused, right? So, you might think it's a 5-star review, but she's actually telling you that it doesn't show you recipes.

[02:52:15] please at least keep the What's in the Fridge feature available once a day for non-premiere users, too. So this is actually a neutral review or a negative review, that it is identified as neutral, whereas if I go by rating, it'll see... it'll show up as a 5-star.

[02:52:30] Now, I'm gonna also talk for all the people in the customer support side.

[02:52:35] AI actually can make you more human.

[02:52:38] Instead of just giving them a silly reply that says, hey, thank you for your review, which is what you see in most of your, you know, use cases, I'm gonna say, write.

[02:52:48] A one-liner reply for this review, in the cell C2, ensure it speaks like the most kind person in the world.

[02:52:55] Right? Because we are happy eaters. I'm actually going to convert this into happy.

[02:52:59] So you can literally prompt it real time, and it's gonna change, right? So I'm gonna say, happy.

[02:53:04] Person in the world.

[02:53:06] And the review is going to change. Maybe it'll, you know, it'll go ahead and add a little more happiness into this. Again.

[02:53:13] I'm gonna go ahead and drag this all the way to the bottom, and suddenly.

[02:53:18] You have 20 unique replies, no more copy-paste stuff. We're so sorry to hear about your connection issue, but we're on it, and we can't wait for you to explore all the amazing features soon. Some emojis to make it fun.

[02:53:33] We're overjoyed to hear how it is joy.

[02:53:36] So you can see that every individual review gets its own reply, and you can literally put an AI agent on top, or pass it over to an intern, and they'll reply to all your parents in a unique, human fashion.

[02:53:48] And the last thing you could do with something like this is, as a product guy, I'm always worried about what feature is actually prompting the user to write this review. So I can choose, guess the product feature that prompted the user to write this review.

[02:54:01] And in two words, it's gonna tell they like meal planning, they hate meal planning, they like ads, they hate ads, and so on and so forth, and you'll see that

[02:54:10] Internet connectivity is a problem. Meal options are something that's spoken about a lot. Slow performance is a problem.

[02:54:17] Invasive advertising is a problem, but recipes people are liking. The fridge feature is showing up, we spent a lot of time in building the fridge feature, so I can go back and see, oh, people are talking about the fridge feature.

[02:54:29] And on top of this, you can literally ask it to create charts for you. So, how many negative, how many neutral, how many positive, it's already done that. And it goes ahead and gives you a sentiment distribution saying, hey, you are at 68% positive, and about 32% negative.

[02:54:45] And it's also doing, you know, a category understanding, so it's saying.

[02:54:50] You have 3 users that have very big bugs.

[02:54:54] So go ahead and solve those.

[02:54:56] all these are critical or high, just go ahead and try and resolve them so that you can improve your average rating much higher, because right now you're getting a lot of negative reviews about advertising and things like that. So, if I'm the CEO of this company.

[02:55:10] I am so happy that 20 of my really good, passionate users who've left reviews, I can convert that knowledge.

[02:55:19] into something that is actionable for the product team, for the customer support team, for the marketing team. And I feel like, okay, I've delegated well, next week our reviews should get better. So, converting data into action is something that numerous AI will help you with incredibly well.

[02:55:35] Right? Now, getting to the last couple of demos, these are actually in your favor. If you want to stay updated.

[02:55:44] You might be like.

[02:55:45] RV, you've gone through 10 tools, I'm already tired, I want to see them on my own pace, or I want to see tools that are very specifically relevant for me, right?

[02:55:56] There's a very interesting meta name for this tool. It's actually a tool called... There's an AI for That.

[02:56:04] Right? And you can literally go to... there's an AI for that as a website, and it's gonna tell you all the tools that are there in your particular territory, right? So let me find that.

[02:56:17] So this is how there's an AI for that looks. Let's just go inside.

[02:56:28] It's an AI tools directory.

[02:56:31] That's, you know, really, really going to help you understand what do you need for your particular category, right? So you can choose what your main preferences are. Say, I do work in business.

[02:56:46] I also do work in marketing, in presentation.

[02:56:52] A little bit of social media.

[02:56:54] And I think... That's most of it. Oh, AI is there. I can pick AI.

[02:57:00] Let me pick one more before I proceed, right? So... I could do GPDs.

[02:57:07] Save preferences.

[02:57:13] Right, so I'm gonna save preferences, and it'll tell you

[02:57:16] When do you want your digest?

[02:57:19] I want it once a week, I want it every Saturday. Exactly after this mastermind is done, hit me with it at 1PM, and I'm gonna sit... say save.

[02:57:28] Right? I allow for notifications, and...

[02:57:32] we will now be notified with whatever new tools are getting, you know, created here. Now, let me also show you their search interface, right?

[02:57:42] So this is, you know, I'm in their free mode currently, and I can look at, you know, whatever tools that are interesting to me. I search for that, and I try and find out. So you can say, I want to find out the tools in finance. Let's wait for this to load. Today we have...

[02:57:58] Some internet issues that are making some of these things lag.

[02:58:02] Right? So let me jump here.

[02:58:05] So they have a very nice search that's going to tell me all the new tools that I've launched, and I just say, I want to work with Excel sheets, and it's going to give me a bunch of options, right? It's gonna say, I'm gonna say...

[02:58:21] Tools for data analysis.

[02:58:24] Right?

[02:58:28] There you go. So it gives you a bunch of tools, and it's gonna tell you that, okay, there's tons of tools, go ahead and try.

[02:58:35] You can say poetry.

[02:58:40] And you'll get tools for poetry, right? Pick poet, very close to my handle, but you have a bunch of tools that load up. So if you're someone who loves tools, then this is the place that you want to go to. Now.

[02:58:54] Are y'all tired?

[02:58:56] What's the room feeling like? Let's get some energy in the chat. I wanna know if...

[02:59:01] All of you have Enough.

[02:59:05] In the tank, for one last demo.

[02:59:10] Yes?

[02:59:13] Say one last in the chat, if you want one last demo.

[02:59:19] All right, I'm starting to see the energy. Okay, folks, this one's gonna be exciting, because this is where we move from generative AI

[02:59:27] to Agentic AI. Yes? Let's go do that one last demo. This one is that of an AI assistant that is in your browser. And for this, I'm going to launch our good old Chrome. We've not said hi to it in a long while.

[02:59:46] I'm gonna open my profile. I'm gonna drag it in for all of you to see. So this is my Chrome.

[02:59:52] But within my Chrome, I now have Claude loaded up.

[02:59:56] Right? So I can go ahead and talk to Claude here by saying.

[03:00:01] Hi, Claude. I have about 10,000 people waiting and watching us on a live stream presentation about generative AI, and I want us to showcase our abilities in agentic browser usage.

[03:00:15] I want you to set the mood first by going to YouTube Music and picking a Pink Floyd track that is futuristic, that makes sense for such a use case. I then want you to open Claude.ai and code out an artifact in HTML that will have

[03:00:31] you know, beautiful curtains, with a button that I could press to open the curtains, and opening the curtains, there is a big reveal with a message that says.

[03:00:41] Welcome to the Agentic AI. Love, RV.

[03:00:45] Can you do this for me?

[03:00:52] Right? And folks, this is gonna get interesting, because it's now... AI.

[03:00:57] Taking care. My hands are in the air, folks. You can see my video.

[03:01:01] My hands are in the air.

[03:01:03] This is... AI going to my YouTube music, Playing that track.

[03:01:13] Right? You can hear that in the background. I love this track.

[03:01:19] So it's happy with, what it's done. It's now moved on to Claude.

[03:01:26] Let's see how it's gonna prompt.

[03:01:28] There you go. Way faster than humans.

[03:01:33] Nate?

[03:01:37] Folks who are asking what is happening, how is agentic AI different from generative AI? The biggest difference is my hands are in the air.

[03:01:45] I've just indicated it once, I could have gone to sleep now, but work still will happen. So it's writing code now.

[03:01:52] Incredible.

[03:01:53] Paid?

[03:01:55] It's writing code now.

[03:02:13] Wow, it's written, like, 400 lines of code.

[03:02:19] Yes, this is the Chrome extension of Claude.

[03:02:23] And... let's see what it comes up with. I'm very excited.

[03:02:32] It's insane, right? It feels like the matrix is just printing and printing and printing.

[03:02:45] And yes, for folks who are asking about, hey, is this tool paid? I am on the paid plan. There's a lot of free ways in which you can access and do this, but of course.

[03:02:53] Free means more work, and free means limited capability. Everyone who's serious about AI, I 100% recommend that you invest in one subscription for yourself, right? It's written thousands of lines.

[03:03:08] Folks, the greeting card is ready. Should we pull the button?

[03:03:13] Should we do it?

[03:03:15] Yes?

[03:03:16] I'm gonna go ahead and click on Open the Curtains.

[03:03:24] That... Folks, is the power of AI.

[03:03:28] Babe?

[03:03:30] I hope that all of you could hear the music in the background, I don't remember if I've enabled sound, but that was a lovely track from Pink Floyd.

[03:03:37] Called Welcome to the Machine, giving us the background, because we've literally been welcomed by the machine.

[03:03:43] Now, closing out... A quick summary of everything that...

[03:03:50] I'm gonna close this out.

[03:03:53] What is generative AI? We began with the fundamentals, we understood what's happening behind the scenes, we then learned prompting, we went into the magic prompt formula, we learned how to pick a model, we saw open router and figured out how can we get our top 3 models for our use case. We then compared models on multi, then we went into seeing how do I use

[03:04:12] AI across different tools, across different parts of my life, and then 12 different tools across 12 different use cases that give you the AI toolkit for the day.

[03:04:22] I hope that everyone in the room is feeling a little accomplished.

[03:04:27] I do want to congratulate all of you for deciding to come here, to learn, to outskill, and to kind of stay ahead of the curve. It's not late if you get your hands dirty, so congratulations and good luck to all of you. Over to you, Fani.

[03:04:43] Incredible are we? Just give me a second as I launch a poll as well.

[03:04:51] Folks, I'm absolutely loving the energy that all of you are showing today. This is just incredible. This, probably, while it was the first session of this entire Mastermind, I usually call it the toughest session of the Mastermind as well, because this is the session on foundations, this is the session that exposes you to multiple tools.

[03:05:10] And Arvi walked all of us, through it in such a comfortable manner. Thank you so much, Arvi, for this. There are a few questions that are cropping up.

[03:05:19] I'll just pause the chat so that I can drop in Arby's link also on the chat that you can all use to go ahead and connect with him. But everybody who is asking about the...

[03:05:30] tools and, you know, names for specific tools and all of that, you will get everything in this resource document that I will also speak about very soon, but I'm just going ahead and dropping it in on the chat right now.

[03:05:43] A few questions that I will call out to Arvi so that we can hear his perspective on it. Ragweed, firstly, thank you so much for running everyone through all of this.

[03:05:53] Some questions that came in were...

[03:05:56] Of course, beyond of the tools, the privacy of using all of these AI models and tools. Also, you know, for majority of the working professionals who are working with companies like Wipro, TCS, etc, they have their own guardrails.

[03:06:09] So what kind of advice would you like to give to them? And people also are in this bubble that, hey, if I'm working with a company today that has these guardrails, does it really make sense for me to learn all of these other tools? What advice would you like to give to this audience?

[03:06:26] I think it's... it's an important transition, right? Individuals first, small companies and startups next, and enterprises last. This has always been the adoption curve for any major technology, right? Whether that's integrating something like even a Microsoft Word. I'm sure the individuals did it first, and then the enterprises started picking it up 30 years ago.

[03:06:46] That same thing is happening again, but you can play a role in influencing the pace at which this happens. I work with a lot of enterprises and a lot of startups, and I realize that one of the important roles that people have is that of a champion. So if you know the capability of these tools individually.

[03:07:03] You know what they can unlock for you and your business.

[03:07:07] If you are the one that champions the cause of bringing this tool internally, then you become very, very indispensable.

[03:07:14] So AI will kind of help you become more important in the org, rather than you sitting and worrying, saying AI is doing all the code, so am I going to be fired? AI's doing all the writing, so am I going to be fired? Instead of worrying about that fear.

[03:07:27] try and become the champion, the people that actually bring AI into the workforce, right? Then you kind of ride the wave, rather than, you know, being worried about the wave.

[03:07:38] The other thing that you mentioned about privacy and, you know, confidentiality.

[03:07:43] there's a cost to that, right? And we know that, you know, in some time, so since the era of Facebook coming into the play.

[03:07:50] In Facebook, we were the product, right? We started uploading our photos, we started writing our feelings, we started, you know, expressing everything there, and suddenly Facebook could know everything about us, and they could give us ads that literally felt like, oh, I spoke about this last night with my wife, and in the morning I'm getting diaper ads, and we've not even had a baby yet.

[03:08:09] Right? So you feel almost intrusive with the kind of amount of data that they have.

[03:08:14] And the biggest thing, or the most interesting thing there, is that Facebook was free.

[03:08:19] Right? If Facebook was \$5 a month, I think a lot of people would not have joined it. So you were the product in that particular case, and you have to realize that. There is a cost to privacy and confidentiality. So if you go ahead and, you know, go onto Blue Sky or some of the other private platforms, you'll end up paying a subscription fee.

[03:08:38] So, if you want to use AI models, the same, you know, framework applies. You can use it for free, you can use it by giving it all the access, and yes, AI models will get trained on that and it'll get risky, but

[03:08:51] If you want to do this right, if you want to do this inside the confines of a company, then there are completely different products for enterprises. So ChatGPT has their enterprise version, Gemini has their enterprise version. Every major model wants to work inside companies, because that's where the money is. So they're already building products that work inside your companies.

[03:09:10] be that champion that will take these products and say, hey guys, I think we need to, you know, go ahead and integrate this, because this is going to make us really faster. You know, have that discussion with your manager, with your leadership, try to be the person who's pushing AI into the company.

[03:09:25] And you can, you know, completely change the narrative around AI being a risk versus AI being an enabler. And I hope that a lot of you today feel like doing that, because yes, this session was about promise.

[03:09:37] Not all of what I did was private, but when I'm doing it for companies, I do it in a private fashion, and yes, there is an answer to both.

[03:09:45] That's a very, very good advice. I mean, irrespective of whether you have 2 years of experience today or 10 plus years of experience today, a lot of the things that you are seeing, or have already seen in this mastermind are things that most of the others in your organization may not be aware of. So even if you are

[03:10:03] are somebody who just has 2 years of experience, walk up to your manager on Monday and talk about what AI can do, and as we move forward in the sessions, we will also talk about privacy in a deeper way, and help you understand how you can make sure that confidential data remains confidential itself, right? There is always a right way to use the AI models, but I love the fact that all of you are having these questions already.

[03:10:27] Arby, I've gone ahead and, you know, taken the freedom to go ahead and share your link on the chat, since people mentioned that they want to connect with you. Any final piece of advice that you would like to give to everyone?

[03:10:40] I think the next couple of days is going to be insane. Stay hydrated, folks. Keep your minds open. Some of the instructors that are going to come your way are going to blow your mind in ways that you didn't imagine. Some of the technologies and the tools, the places that they've reached is...

[03:10:59] Unfathomable. Last night, I used a tool called as Design by Claude, and I completely replaced my interior designer.

[03:11:08] And the kind of output that I've shared back with him, they're like, who did this for you? How much did you pay for this? And I'm like.

[03:11:16] bro, wait, I didn't like your work, you were not giving me detail, so I asked an AI agent to do it, and it's, like, it's literally a few lakhs worth in Indian rupees of service that I could get in a couple of hours. So work and life, as we know, is changing.

[03:11:32] please, please, please be open-minded enough to figure out what is the role of AI in my life, because it's not a technology you can ignore.

[03:11:40] Right? It's like that song by Enrique. You can run, you can hide, but you can't escape it. So, just go ahead and get this into your life in fashion that suits you. Everyone has their own path, and funny, I always say this, it's like spirituality.

[03:11:56] Figure out your own path. Not everyone follows the same... my tools will not work for you 100%, but my tools, customized to your use case, can give you your own set of toolkit. So having a toolkit is

[03:12:10] absolutely necessary. Go ahead and use the next few hours, I think, what, 12 more hours of this, you know, workshop that you have. Learn as much as you can, re-watch, try, get your hands dirty.

[03:12:23] And you will be better off on Monday. That is the promise I can kind of give you, right? Like, the speed at which you can learn in these things is insane. Just keep an open mind, go crazy, get your hands dirty, all the best.

[03:12:36] Absolutely, and the tool that Arvi was talking about, which is Cloud Design, you're all going to be seeing that in the next session itself. We are going to be teaching that in the next session, Weber is coming in to teach exactly that. But thank you, Raghavi, for being here today.

[03:12:53] I will go ahead and... Yes, thank you, Funny. As always, folks, you're in great hands. Enjoy Funny's company, he tries to make it easy and simple for you, and of course, when Weibov and the other folks are here, they're gonna kind of shoot through the roof in terms of energy, so have a great one. Thank you so much, bye-bye.

[03:13:10] Thank you, Ragwir.

[03:13:12] Alright, everyone, now I see a few messages that people are getting hungry, but before you get hungry, or before you start eating and we take the lunch break, I'm dropping in Arvi's link once again on the chat for those of you who did not find it.

[03:13:25] And I'm also dropping in the resource link on the chat. I'll just share my screen and show you all what are the resources that you're getting access to right after session one, and then we will jump into the lunch break directly, right? And I'll also set context about what you will learn after the lunch break, but

[03:13:45] as you open the drive folder, and we're going to keep populating the same drive folder after every session as well. Your workbooks are going to come in over here, session notes are going to come in over here, all of the other resources that we will be sharing with you through this course... through the course of this entire Mastermind, we're going to put them here itself. And now, when you open session notes.

[03:14:07] This is what I was talking about, right? Everything that Raghvi taught us has been captured inside this entire document, right? People have been asking, what is the difference between generative AI and agentic AI? That has been captured as well, because we already spoke about it as the entire session got started. The roadmap to become an AI generalist, what are the different levels that we will be looking at inside this entire

[03:14:31] mastermind. What is prompt engineering? We spoke about

[03:14:35] role or context, we spoke about task, we spoke about instructions, we spoke about data. All of that has been put up right here. And then we spoke about an AI toolkit, but before that, we tried to understand how do these AI models work. That has also been captured here, which is tokenization, embedding, self-attention, prediction, and response generation. We spoke about common AI assistance and the models that

[03:15:00] power them, and we spoke about a lot of other tools as well that, as you scroll down, you will be able to find inside this document itself. Now, a lot of people are also asking about the prompts.

[03:15:14] Inside this, you have a section called Prompt Library, so every prompt that has been used in Session 1 has been provided to all of you. However, I recommend all of you to learn the art of prompting.

[03:15:27] Now, as all of us take the lunch break, during the lunch break, I want all of us to be able to go ahead and do a very quick activity. I'm just quickly dropping in a link on the chat box.

[03:15:44] Alright!

[03:15:47] A lot of messages have come through stating that, hey, how can I go ahead and let others know that I'm learning over this weekend? And to make it easier for you, and to make you do that with AI, we went ahead and built a product. We are also going to be talking about how we built this exact product.

[03:16:06] But this product is going to help thousands of people on this call make a LinkedIn post about attending this Genitive AI Mastermind and learning AI through these two days.

[03:16:20] manually. And how is it that you use this tool that I've already dropped in on the chat? You go ahead and first put up a profile picture, any image of yours. And when I see... when I show the output, you will understand why it is asking for a profile picture as well. Quickly pulling up my image right now. Give me one second to do that.

[03:16:44] Okay?

[03:16:47] Alright, I don't know why it's not letting me type at this point of time.

[03:16:53] But do I have my picture anywhere?

[03:16:57] Alright, let me just use this one.

[03:17:00] Okay, and what's my name? My name is Funny, I am the associate Director of... Growth...

[03:17:11] and outscale, and what am I excited about? I'm excited about the fact that people from all over the world have come to learn generative AI, and we just got started. We finished the first session, and I've already learned so much.

[03:17:27] I've learned about multiple AI models, multiple AI tools, and everything around it. I'm really looking forward to the upcoming sessions in the Mastermind.

[03:17:36] I go ahead and talk about what I'm excited about, and then I click on Generate LinkedIn Post. As I go ahead and do that, AI is going to use the information that you have already given, and it is going to help you write an entire post, all by itself.

[03:17:53] And...

[03:17:54] how this has helped a lot of people who did this previously is that, like I've been saying, a lot of people know that AI is powerful, but are not putting in the right time to learn all of that.

[03:18:06] You are doing exactly that. You're spending more than 16 hours of your time learning generative AI. So when you put this out, people are going to reach out to you, people are going to ask you certain questions that they have about generative AI, and you get that opportunity to start that conversation. So my entire post

[03:18:24] is ready, I can simply go ahead, highlight this entire post.

[03:18:28] copy it, and I have a poster also that gets generated with my image inside of it. I can go ahead, download this entire image, drop in a heart if you like this entire poster that came out. Lot of people who are a part of the Outskilled 2-Day Generative AI Mastermind community go ahead and make this

[03:18:49] post on their LinkedIn profile. So you download it, go into your LinkedIn profile. Once you go into your LinkedIn profile, you can simply go ahead, click on Start a Post.

[03:19:01] Drop the image, Right here, and then you can simply go ahead and paste the text.

[03:19:08] and also tag your next mentor, or all of the mentors that have gone ahead and taught you, right? You can go ahead and tag all of the mentors who are going ahead and teaching you, and you can make this post happen.

[03:19:23] How many of you would want to go ahead and do this activity during the lunch break? Drop in a quick me on the chat, ME on the chat, if you would like to go ahead and do this activity. And as you do this activity, we are going to be checking the posts and also commenting on your posts as we go ahead and

[03:19:42] As the posts sort of come out.

[03:19:46] Perfect! That's your lunch break activity. Now, right after the lunch break, which is going to go on till 1.45pm IST, right after the lunch break, what are we getting into? Well.

[03:20:01] In this session, or in the first session, we learned how to use AI tools that are available. What if I tell you that you're going to be learning how to build your own AI tools?

[03:20:12] in the next session, drop in a wow emoji if that sounds exciting. And no, we are not going to be writing any line of code at all.

[03:20:21] We are going to be using English to build our own AI bots and AI assistants.

[03:20:27] not just using other tools, but we are going to be building them. We are also going to be learning how working like an AI generalist is going to look like, and WebHub is coming in to teach all of us all of this, right? From 1.45pm IST. If you are from some other country, please convert this into your own time zone. It's about 35 minutes from now, that is going to be the lunch break, and we are going to stick on the same

[03:20:52] column.

[03:20:53] We will continue on the same call. I will play some music during your lunch break, and...

[03:20:58] A lot of you here have already seen WebExNT's Instagram profile, YouTube profile, and everything around it. Those of you who have not.

[03:21:07] you can go through his socials as well, because a lot of work that happens on his social media profiles today, which has close to 5 million plus people following him all across social media, all of that is driven by AI.

[03:21:23] So, all the distribution that you see is today being driven by AI itself. We're gonna talk about how this happens as well, but if you have not seen WebOpsicity's social media profiles, I would recommend you to go ahead and take a look at it during your lunch break. And you can also go to the YouTube channel, look at the recent podcast that came out, so that you get a sense

[03:21:47] Before he actually comes in and teaches all of us how we can build our own AI bots and assistants.

[03:21:53] So on that note, I'll quickly turn on this timer.

[03:21:57] Tune it to 35 minutes, and we will get started in exactly 35 minutes.

[03:22:04] Are you all clear? Drop in clear in the chat.

[03:22:08] Clear in the chat if you are clear about when we are coming back from the lunch break.

[03:22:15] Perfect.

[03:22:17] Loving this, loving this. I will drop in the link to the onboarding post once again.

[03:22:24] Arpith is asking exactly for that. Let me go ahead and drop this in.

[03:22:31] There you go. And there are people who are asking, how can we refer this event to others?

[03:22:37] I'm sharing that link as well on the chat, you can go ahead and refer others into the next batch of this entire mastermind whenever we go ahead and do it. But right now, I'll leave you all for your lunch break, and let's come back exactly at 1.45pm IST to take this forward from here.

[03:22:55] Let me play some music that'll continue to energize you, and I would love to see that excitement after the lunch break as well.

[03:23:05] Alright, give me a second, I'm gonna share my screen once again.

[03:23:13] Just a second... I'm closing the reactions during the lunch, but we're gonna open that up once we come back.

[03:23:21] Let me share the sound. Alright.

[03:23:27] See you all exactly at 1.45pm IST.

[03:23:39] The sky high!

[03:23:41] But took our breath away. Here are 10 interesting trivia facts about Tom Clinton

[03:23:47] One real name, Tom Cruise's full name is Thomas Cruise Magnolo.

[03:23:51] His breakout room.

[03:23:55] When he famously danced in his underwater Seekers!

[03:24:02] Rock and roll!

[03:24:05] All-time rock and roll!

[03:24:08] Cruise has been automated for three Academy Awards throughout his career, but born on the floor.

[03:24:15] 1989, Jerry would go Holy God!

[03:24:22] Magnolia!

[03:24:37] Known for performing many of his own stunts. For example, in the Mission Impossible series, he has done everything from hanging off buildings to flying helicopters. Five Scientology.

[03:24:51] Looking for the Church of Scientology has been one of its most famous and outspoken members for decades. 6. He's a pilot.

[03:24:59] Bruce is a certified pilot, and has flown in a variety of aircraft, including jets.

[03:25:05] World War II era plane, he flew in Top Gun Maverick.

[03:25:11] Cruise has been married 3 times to actresses Mimi Rogers, Nicole Kidman, and Katie Holmes.

[03:25:18] It's key, cause movies are both good.

[03:25:21] Mission and...

[03:25:25] Films of his career. It was at all.

[03:25:30] Bruce said along with it Oh, stops for... his own previous record, Ignition.

[03:25:50] If you're ain't go supporting children, with disaster relief efforts.

[03:26:02] Academy Awards throughout his career.

[03:26:05] 4th of July, 1989. Jerry Maguire.

[03:26:09] Magnolia, Magnolia, Magnolia! Magnolia, Magnolia. Bill Cruz is not... Or cruise is a problem.

[03:26:19] of Scientology that has been one of its most famous and outspoken members for decades.

[03:26:25] He's a pilot.

[03:26:27] You said a wall!

[03:26:52] City likes like diamonds blink on tight streets.

[03:26:58] Honking horns play symphonies where chaos meets. Move like shadows on a neon-painted stage. In this moonlit traffic, let's turn another page

[03:27:14] Morning coffee surfing me dries rise with the dawn.

[03:27:20] Busy bees in their carpool, just carry on.

[03:27:25] Street, lights, The dreams we've had are still surreal.

[03:27:30] In this moment, Our secrets, they conceal.

[03:27:44] Things we roll!

[03:27:49] AI is true!

[03:27:52] Every liar story has to die.

[03:27:58] Boys scream with faces we don't recognize.

[03:28:03] Every mile... within our...

[03:28:11] We left behind In this moment, traffic... Freedom's what we find.

[03:28:19] Silent radios play the songs of yesteryear.

[03:28:25] Windows down the wind.

[03:28:27] I never... Vision's good.

[03:28:33] He stands high.

[03:28:36] Let's beam!

[03:28:38] We'll finally climb!

[03:28:42] Nice girl!

[03:29:47] Every life story etched upon the wall

[03:30:22] I walked these halls a thousand times, felt the silence right at the signs. Hiding shadows, biting tongues, I thought I'd change, I fit, I was used to it.

[03:30:37] I tried to fit inside your world Bend myself a broken stead. Every whisper, every lie kept me hanging in this rope.

[03:30:48] I feel... The way... I feel my tears The game is stupid

[03:30:58] Don't be long, I should stay too long.

[03:31:11] I held my breath, I played along Felt the weight of staying strong. Every promise wore me thin Still I stayed and let you in.

[03:31:21] I tried to fit inside your own.
[03:31:24] Every whisper, every line, Kept me hanging in this robe, now I'm going
[03:31:38] The game!
[03:31:42] belong.
[03:31:43] I should stay too long
[03:31:54] Now it's crystal clear. I was just a ghost to you. No more waiting, no more pain, I'm not
afraid to walk away
[03:32:04] I just stayed too long
[03:32:14] Now I'm not... I feel the way I feel, why did I?
[03:32:27] I'll just stayed too long
[03:32:46] How'd you stay tuned?
[03:32:49] I'm gone!
[03:32:51] I'll prove myself.
[03:32:53] Try to fade along, I will find a place to belong.
[03:33:58] Welcome to the...
[03:34:08] Dancing to the ones no one plays anymore. You sang the wrong word to London Calling. I
joined in and we both started laughing.
[03:34:19] Tape, held it like gold.
[03:34:21] I'd be, that's the I'm told.
[03:34:24] It's like life, rough in the middle, you smile
[03:34:44] Repeat, stuck.
[03:34:48] Stuck onto rooftops just to kill time, countin' Saturdays
[03:34:51] Like trails and graffiti signs, he said, do you think Remember this night of February.
[03:34:58] It's probably... Right, we play dumb games on a Game Boy.
[03:35:03] Beeps in your silence, both equally loud.
[03:35:07] I looked up and said, isn't it wild how this feels like Welcome to nowhere!
[03:35:26] Pete Stuck!
[03:35:42] We burned the time we thought we'd keep Let the ash settle like snow on the street. Who
cares if it's bleeding? Who cares if it's wrong? Not every chorus needs a verse to belong.
[03:35:59] Push on all the hat
[03:36:18] Welcome to Nora!
[03:36:37] Normal borders.
[03:36:43] Alien blood.
[03:36:44] Others, you belong here.
[03:36:47] No more borders.
[03:36:49] Oh, fear.
[03:36:51] Alien brothers, you belong here.
[03:37:11] No more water.
[03:37:17] You belong here.

[03:37:19] No more borders.

[03:37:22] You won't move here.

[03:37:25] Oh, yeah.

[03:38:19] No more borders, no more fear. Alien brothers, you belong here. No more borders, no more fear. Alien brothers, you belong here.

[03:38:52] No more borders!

[03:38:54] No more fear.

[03:39:01] Yeah, yeah, yeah, yeah.

[03:39:07] Systems broke, people choke, living check to check. World's a mess, more stress, what did you expect? Top dogs feast while the streets can't catch a break. Time to wake up, see the game for what's at stake. Stand up, rise up, no time for tears.

[03:39:27] He'll talk straight or walk through these twisted ears.

[03:39:32] One head washes the other, that's how it goes. You reap what you sow, that's how it flows.

[03:39:41] Politicians talking, but their words are cheap, while folks out here grinding, barely getting sleep, bank accounts empty, landlord at the door, time to flip the script, change the rules of war. The system ain't broken, it's running just fine.

[03:39:56] Those who designed it draw in every line, but we see the truth now behind it.

[03:40:01] to rewrite rules that they thought was law. Look left, look right, same struggle, different face. Race to the bottoms, got us stuck in this place, but strength in numbers, that's the ancient code, share the load, or watch the whole thing explode. They say, pull yourself up, but they cut all the

[03:40:16] Fightin' each other while they count their notes. Education's priced out, health gets for the rich.

[03:40:22] Break it down and build a system that fits.

[03:40:26] No time for tears.

[03:40:30] Real talk, straight walk through these twisted ears.

[03:40:35] One hand washes the other, that's how it goes. You reap what you sow, that's how it flows.

[03:40:45] Yeah, but we ain't done yet Building bridges while they build their fences. Time to make moves, no more pretenses. Power to the people, break down the fences.

[03:40:56] Build something new.

[03:41:00] System change coming all over the

[03:41:31] I didn't rise a normal faller.

[03:41:42] They never believe, they sleep for the streets. Rain, they fall longer, they chop my feet.

[03:41:57] I know they place to rest my hair. But I still, they dream no time for bed. They call me failure, they say I no feet. But I hustle, I know God quits. Get that for hand, my soul, they cry. They feel they struggle, but I still, they try. From the ground, I rise. Strain don't fall, but I still, they shine. I be prayer, they fight, fight.

[03:42:21] Don't go judge me, make you hold your side. As I be younger, as I be thinner, as I be waiting in me.

[03:42:46] Now then they see me, then they shout my fame. From the street, I rise like smoke. Now my house, do they pay not go vote. I no go lie, I know go forget the part. Now I they shine, how they move so fast. From the ground, I rise Free don't fall, but still they shine. I did pray, how they fight, find out, see me now, I will take my time.

[03:43:09] But today, I didn't

[03:43:34] Now I just pop, now my music displays. Don't go judge me. But I did alright. Don't go judge me, make you all just fine, never judge me, no stopping my fight, never go judge me.

[03:43:58] If you were just a side.

[03:44:06] I come from the bottom, now I didn't live my life.

[03:44:15] I understand my derivatives

[03:44:48] We met on the moon.

[03:44:51] You were dancing in the dark Feeling confused?

[03:44:57] Didn't know if it was right.

[03:45:00] He texted me... In the middle of the night.

[03:45:06] Didn't make much sense.

[03:45:09] But I think I got it right.

[03:45:13] Oh, what a feeling I've got inside.

[03:45:19] Oh, what a feeling I've got inside

[03:45:36] You took me to your place Can't stop laughing in your arms Day after days...

[03:45:45] Something growing in your mind.

[03:45:49] We met on the moon.

[03:45:51] You were dancing in the dark.

[03:45:55] Feeling confused?

[03:45:57] Didn't know if it was right.

[03:46:02] Oh, what a feeling I've got inside

[03:46:08] Oh, what a feeling I've got inside

[03:46:26] Could it be the feeling of love?

[03:46:29] Could it be the feeling of love?

[03:46:32] Could it be the feeling of blood?

[03:46:35] Could it be the feeling of love?

[03:46:37] For the first time, I think I'm falling in love with you

[03:46:47] With you. Oh, girl. With you.

[03:46:54] With you...

[03:47:29] It is the morning of my life again.

[03:47:33] And the wind upon my back.

[03:47:35] Seems to whisper, why go home?

[03:47:38] When you're free is life.

[03:47:44] But the blackbird flies from the garret.

[03:47:48] In the town where Bruegel lived, and a tear of blood runs down the ivory beak.

[03:47:55] While the evil men rewrote history.

[03:48:02] When the black... Where's the blackbirds sing. Let him bring us peace.

[03:48:17] Now he's standing guard on a sandy beach somewhere, and the troops are coming off the boats. They're here from across the waves, and the thousand plains prepared to bring in.

[03:48:32] The final assault from the air. A child's thin weep through wires invisible to her are conquered by the noise.

[03:48:42] When the black... Let's sings... Let him bring us peace. Bring us peace. Bring us peace.

[03:49:05] And the blackbird flown before was always there, but never overseen. Like the coins that float upon the blows of the lover's size.

[03:49:16] But the bones of the legend beneath her gorgeousness.

[03:49:23] Just an old wives' tale who'd believe in love. They placed their trust in God and in guns.

[03:49:31] When the black... Let's sings... Let him bring us peace. Bring us peace. Bring us peace.

[03:49:54] And the black bird who precedes a child's thin weep through wires invisible to her are conquered by the noise.

[03:50:03] When the black... tires... Let him rest his wings.

[03:50:14] Let him give us peace.

[03:50:21] When the blood...

[03:50:42] I wanna chase you like I did when we were kids. I ran you hid, strawberry lemonade, no lids.

[03:50:50] Young summer days on my mind when we were freckle kissed a thousand times, freckle kissed a thousand times, freckle kissed a thousand times, times, times, times.

[03:51:04] Top-to-top.

[03:51:18] Down at the oak, we carved our names. Turned all the clocks back, but they never came. Spitting verses and making rhymes.

[03:51:29] Freckle kissed a thousand times. Freckle kissed a thousand times. Sun kissed freckles on your nose.

[03:51:39] I'm Daisy and Roy!

[03:51:43] Kissed a thousand times. Freckled kissed a thousand times, freckle kissed.

[03:51:49] Kids, kick, kid, kick, kid.

[03:52:32] Run in circles round the pond. Lily pad, hermit crab, blue sky, green lawn. Long days, the sun will shine.

[03:52:44] Freckle kissed a thousand times. Freckle kissed a thousand times.

[03:52:53] My day's getting rolled Something nice smell!

[03:53:01] Comin' next, we don't know.

[03:53:13] We've cut!

[03:53:17] Freckle kissed a thousand times, freckle kissed.

[03:53:22] Freckle kissed?

[03:53:25] Who kissed?

[03:53:27] Freckle, kissed.

[03:54:05] Sell you a dream, wrapped in shiny white logo.

[03:54:09] Souls, a beacon of life!

[03:54:12] I'm scream!

[03:54:18] In Boxed in camp!

[03:54:28] Last morning you need.

[03:54:32] In charge of... They sold your soul.

[03:54:47] And dongles your wallet and fear the ****

[03:54:50] Your old gear won't sink, they make it on!

[03:54:53] Just to make it fun.

[03:54:55] Yes, you want this!

[03:55:03] It's the green!

[03:55:05] Every click costs more than you need.

[03:55:11] Story days!

[03:55:16] And we line up in droves.

[03:55:19] hypnotized for the latest toy in a perfect disguise, they say it's the

[03:55:24] future, but it's all a ruse, a gilded cage and we pray. The spark that starts the fire, a
thousand dreams, hearts full of desire, through the night, we've found our way Together we
ride

[03:55:41] Every day!

[03:55:44] Come so far, it's one of us!

[03:55:47] Shine!

[03:55:48] Stop!

[03:55:50] Now as we gave up!

[03:55:56] The fall!

[03:56:12] We've built a world from lines of code, turn ideas to life.

[03:56:17] The seeds we sowed Generative minds a boundless stream I'll skill you know A dream!

[03:56:28] Oh, we've come so far!

[03:56:53] See ya.

[03:56:55] I'll never fall Every challenge, every test.

[03:57:01] We stood as one, we gave our best. Our voices

[03:57:06] Go strong and true, the future is end As we'll see!

[03:57:17] Still, we've come so far!

[03:57:21] A shining star Bruce 16 hours we gave our ride!

[03:57:28] Guys!

[03:57:30] Beautiful!

[03:57:42] All right, everyone. Is everyone back from the lunch break? Drop in yes on the chat if you're
back from the lunch break.

[03:57:55] All right.

[03:57:59] Perfect, and as everybody joins in, I'm just quickly pushing out a poll as well that I would
want all of you to go ahead and answer, which is the post-lunch attendance

[03:58:10] poll, so that we know whether you have attended the first session or not. So, it'll be great as
everybody comes back in. Go ahead and answer the poll that we have put out.

[03:58:24] All right.

[03:58:26] I will share the link of the resource file once again.

[03:58:29] I'll put it in on the chat, and after every session gets over, we will keep updating the resource drive as well, with the notes, so that you have everything at one place. I've gone ahead and sent that file on the chat, and I saw during the lunch break that a lot of you have gone ahead and posted on LinkedIn. Our team will be connecting with all of these posts as well, and that is how you can all go ahead and connect with each other.

[03:58:54] In case anybody has not been able to do that yet, you could do that after the day ends as well. I see

[03:59:00] people going ahead and participating in the attendance poll that we have launched. As all of you do that, I will go ahead and set context for what we are going to be learning over the next three to three and a half hours.

[03:59:11] Now that we are done with the lunch break. So, in session one, we started with the foundations of AI, we learned how AI models essentially work, we learned magic prompt formula, and we also learned a lot of AI tools.

[03:59:26] We're gonna shift the gears slightly now, and we're gonna go ahead and learn how we can build our own AI bots, how we can build our own AI assistants.

[03:59:35] Using the same prompting framework that we already learned.

[03:59:39] Of course, by advancing into the next steps of prompting as well. So you're going to be learning some key frameworks of prompting, you're going to learn how you can use tools to build assistants and AI bots.

[03:59:53] and you're also going to be learning about how an AI generalist essentially operates. A lot of you in the first session also asked, what are some

[04:00:01] AI solutions that we have implemented at Outskill. So, Webhub is coming in right now to go ahead and speak about all of this over the next 3 hours.

[04:00:11] And, of course, he has been educating a lot of people on the internet, but today, all of us have the opportunity to listen to him live. I hope all of you are excited to meet Webhav, drop in excited on the chat.

[04:00:26] A lot of you have mentioned that you have already heard from Webhav during, I mean, through podcasts and everything else, but for those of you who do not know, he's the founder of Outskill, making generative AI education accessible to

[04:00:40] Billions of people all around the world, and he also today is the largest

[04:00:46] AI content creator in the entire world. He has close to 5 million plus followers as of today, and that is just growing with the vision of helping as many people as possible learn and get started with generative AI. Super excited to have Webhuff in. Webhuff, I hope you are able to hear me and see me.

[04:01:05] Let me just go ahead and give you the access.

[04:01:09] What is up, people? I hope you guys can hear me and see me.

[04:01:14] Yes. Drop in a yes, if everybody can.

[04:01:18] All right, all right, yes, yes, yes. Good to see all of you people, very excited to host you guys. There are a bunch of crazy things that has happened in the world of AI in the last few weeks, and I thought I'll show you a few stuff, alright? So, I hope you guys are excited. Funny, how was the first session?

[04:01:37] Oh, the first session was absolutely mind-blowing.

[04:01:41] Yes, I'm also seeing a lot of people dropping messages about how they have experience in the first session as well. Looks like amazing, superb, mind-blowing.

[04:01:49] Okay, great, I can read all your messages. Thank you so much. And without further ado, should we get started? Should we get started so that, you know, we get into the meat of things, and then we can keep chatting on the go any which ways?

[04:02:04] Yes.

[04:02:05] drop a boom in the chat, B-O-O-M, guys, B-O-O-M. Let's drop some bombs in the chat to make sure that all of us are here, all of us are all set.

[04:02:16] to have some learnings. Okay, there you go. Okay, let me quickly share my screen. Funny, is my screen visible?

[04:02:25] Yes, now it is.

[04:02:27] Yes, okay, perfect. Give me a second, I'm just gonna set things up.

[04:02:31] Okay, a quick heads up, guys, as we are getting into this, this is a heads up that I give almost every time. You know, I go a little wild with my AI, so I have a few AI agents running on my computer. As we am teaching, I'm vibecoding something on parallel as well. There are a lot of local AI models that run on my computer, and, you know, I've given Hermes and OpenClaw kind of agents.

[04:02:56] to go wild on my computer. So, if you all of a sudden see something weird happening on the screen, don't get worried or anything like that. It's probably an AI agent trying to use something. And two, Fari, this is for you, again, I've told you this last time as well. For whatever reason, my computer suddenly restarts, there's a good chance that I might get kicked out of the call.

[04:03:17] Guys, I've been trying to get a Mac Studio for some time. Mac Studios are out of stock, so I'm not able to get much. As a result, I'm learning... I'm running literally everything on my main computer. So just in case if something... I get kicked out for whatever reason, usually computer goes into restarts when agents are trying to, you know, do some shell programming in the backend. If that happens, funny, you can take over.

[04:03:40] For a couple of minutes as I come back.

[04:03:43] Are we on the same page? Are we on the same page? Yes, yes, yes, in the chat.

[04:03:48] That way, I know that we are on the same page, and you're not getting paranoid if something happens on my screen.

[04:03:54] Okay? Okay, perfect.

[04:03:57] Because last time, when something suddenly opened on my screen, people were like, how is that possible? What is happening, WebUff? Who's controlling your computer? A few people also wrote me emails saying that your computer is hacked, you should check.

[04:04:09] It's not hacked, so chill out. Okay, okay, okay. Okay, guys, so we're gonna have some fun, over the course of the next, few hours. I think we have... we have about three and a half hours together. Fani, I'm gonna... do you want to keep the chat on, or do you want to keep the chat off?

[04:04:26] I mean, we can keep turning it on, turning it off. Okay. I'm not gonna... I'm gonna turn off the chat from in front of my eyes so that I don't get distracted. If there's any important questions that you need to handle, I will expect, you know, you to be able to handle that stuff. Yes?

[04:04:41] Okay, okay, what else? Let me quickly see, I want a...

[04:04:52] Okay, looks like, okay, works, guys. I've got everything handy, everything handy right here, so without further ado, let's get started. So, you know, in the first session, what you probably explored at this point of time is

[04:05:07] things around, you know, playing around multiple apps, right? That is probably what you explored in the first session, right? You played with some apps, you played with some workflows, you played with stuff like that, but right now, what I want to play around with, or what I want to take you guys deep into, is building some bots.

[04:05:26] How many of you guys want to build some bots? Drop in a hut.

[04:05:29] If you want to build some bots, drop in a hut.

[04:05:33] Yes?

[04:05:34] Okay, perfect. Let us

[04:05:37] do that right now. And you see, a lot of people, whenever I talk about building a bot, they're... you're often, like, confused or paranoid, saying that bots, that sounds technical. Oh, that means I need to know how to write code and whatnot, and you have all these assumptions, right? Well, what if I tell you that we're gonna start with something very simple?

[04:05:56] What do I mean by that? If you go to ChatGPT, the simplest tool for you to build an app is actually ChatGPT.

[04:06:04] Okay? But for whatever reason, my ChatGPT is not working on my browser, so what I'm gonna do is I'm gonna quickly open a new incognito, so that I can show you what I wanted to do. Alright...

[04:06:18] Here we are. We are on ChatGPT. Now, a lot of people are often wondering, right, like, what do you mean by building a bot inside of ChatGPT? Can you build a bot inside of ChatGPT? Yes, you can. When you're on ChatGPT, even if you're on the free account, right? If you open the sidebar, there is something called as GPTs.

[04:06:37] And when you click on Explore GPTs, a very interesting space kind of opens up. You know what these are? These are basically micro-apps.

[04:06:47] that are built on top of ChatGPT, and they are called as, basically, GPTs. You can see there are literally thousands, not thousands, lacks of GPTs that are already existing out there that you can use. Literally lacks of them, not even kidding.

[04:07:02] Right? All these GPTs are right here. Now, let's say you want to use one of these. How do you go about it? There's a nice little search box. You can search for any problem statement that you want, and you should be able to find it. For example, let's say I want to look for a GPT or an app.

[04:07:18] that is built on top of ChatGPT, which can help us to basically write emails, let's say. I want help with emails. So, I'm gonna come here, and I'm gonna just search for email.

[04:07:29] And let's see, if someone in the world has built an app on top of ChatGPT, which basically can write emails, and you can see this

[04:07:37] There are a bunch of people who have done that, and the one that I see right on the top is the email and the mail writer. Guys, again, I'm telling you, these are apps that are inside of ChatGPT that you and I can use for free, okay? So there you go, there's an email and mail writer tool right here. When I tap on that, you can see a nice little pop-up kind of opens up.

[04:07:56] What is this? Well, this is basically a logo, the name, the description, and all that good stuff is right here. And I can simply click on Start Chat.

[04:08:05] So I'm gonna click on the Start Chat button, and here we are.

[04:08:08] This is the UI of this GPT at this point of time, which is a email and a mail writer. You can see the name, you can see the logo, you can see a description. Instead of chat GPT, it says Mail and Email Writer. So, effectively, this is an app.

[04:08:23] That is built by someone called MakeGPTWork.com, I don't know who the guy is, who has built this app on top of ChatGPT, and can write emails, right? So, I'm gonna see how good an email can it write. So, I'm gonna use Whisperflow to see how good an email it can write, so I'm gonna write a prompt.

[04:08:41] You know what? I'm looking for a leave, tomorrow and day after tomorrow, because, you know, I spent a lot of time learning AI.

[04:08:51] And, over the weekend, and my mind is literally buzzing with ideas. So what I want to do is, I want to be sure that I'm basically using all the learnings that I've had so far, and bake that right into my work as well. And if I want to be able to do that.

[04:09:07] Something very important that I have to do at this point of time is that I need to take some time out to reflect back on all the learnings that I've had.

[04:09:16] And to reflect back on all the learnings that I've had, I want to take a leave on a Monday and Tuesday. So please grant me leave, so that when I come back to work, I'm a 10 times better human.

[04:09:27] And you know what? If possible, don't deduct it from my leave balance, because, you know, I spent my whole weekend learning AI so that I can do better with my job, so I was, in a way, working.

[04:09:37] So it would be great if you don't deduct from my leave balance.

[04:09:41] There you go, guys, I've put the prompt very, very simple. You can see this. I've explained my pain of spending all the weekend on learning AI, and I basically want a very good email, and here it comes. You can see that.

[04:09:56] Nowhere did I mention, guys, if you look at the prompt, nowhere did I mention, write an email. I just told my story. And you know what? Because it was the email and mail writer tool, it understood.

[04:10:08] And came up with an email right here.

[04:10:12] Are you able to understand how this tool works? Give me a thumbs up.

[04:10:16] If you were able to understand how this tool works, give me a thumbs up.

[04:10:21] Yes, perfect. So that's what I'm talking about. Because it's an email and a mail writer tool, I didn't have to explicitly mention, do this, do that. It understood what I want, and it built it for me, right? Now, the next thing that I want to talk about is... now, we played with one of the GPTs.

[04:10:37] There are literally millions of, like, hundreds of thousands of GPTs, lacks of GPDs right here, and you can play with them, that's not a problem, right? But what I want to focus on at this point of time is something even more important, and you know what that is?

[04:10:51] How the **** do I create one?

[04:10:54] How the **** do I create one of these GPTs? How many of you guys want to learn how to create? Drop a comment, create, in the chat.

[04:11:02] Drop a comment, create in the chat.

[04:11:05] If you guys want to learn how to create it.

[04:11:10] Brilliant. A lot of people want to create, yes? So, I'll teach you how to create one. But, before I get started.

[04:11:18] Right? Before I get started with creating, I want to give you guys a heads up. A few people are like, hey, I cannot find GPTs. Here's the URL, chatgypt.com slash GPTs. If you go there, you'll land right here.

[04:11:30] For you to be able to see this create button that you see right here, right? For you to be able to see this Create button, you need to have a paid chat GPT account.

[04:11:40] Now, you'll be like, bro, I don't have a paid chat GPT account. Can I do something for free? Yes, you can. And I'm gonna teach you how to do this for free as well.

[04:11:49] But first, we need to learn the method to the madness, the process on how to build one. Once we learn how to build one, I promise you, I will teach you how to do this for free as well. Sounds like a deal?

[04:12:01] Drop a comment, deal, in the chat, if that sounds like a deal. You're gonna focus, you're gonna learn how to do this, then I'm gonna teach you how to build it as well, for free, even if you don't have a paid ChatGPT account.

[04:12:12] Okay, let us do that right now. Now, imagine that you have a paid chat GPT account. You will be able to see a nice little create button right here.

[04:12:22] I tap on this Create button, a new user interface kind of drops up.

[04:12:26] This, my friends, is called as the GPT Creation Wizard.

[04:12:31] What is it called? GPT Creation Wizard. Using this UI, you can actually build a GPT. It's as simple as that, that's why it's called GPT Creation Wizard. Now, what does it do, and how does it work? Well, it's very simple.

[04:12:44] You just tell it what you want to build, and it's gonna build it for you on the backend.

[04:12:49] For example, this, like you can read very clearly, is the creation section, and there's a chat box, I can literally talk about what I want, and it will understand what I want, and start building. And whatever it is building, right, I can see that right here on the right side, where it says review. So you have one window where you can build, and you can see what is being built over the course of time.

[04:13:12] So, let's build one. What do we build? Let's say we want to build a tweet generator. What is a tweet generator? Well, a tweet generator is where, if you give a topic.

[04:13:23] To it, it should be able to generate a tweet

[04:13:26] on that topic for you. That's what we want to build, okay? So, I'm gonna come here to the left bar, like I said, this is how you build it, and I'm gonna just say what I want. So, I'm gonna be like, you are an expert.

[04:13:39] Twitter content creator, or a Twitter content copywriter. You have this incredible experience of writing viral tweets. You're so **** good that every time you write a tweet, there's a 9 out of 10 chance that it has a possibility of it to go viral.

[04:13:54] What I want you to do is, every time I give you a topic, your job is to understand the topic.

[04:14:01] read about it if needed, and come back with one tweet that has very, very high odds of going viral on Twitter.

[04:14:09] That is exactly what I want you to do.

[04:14:13] Okay, guys!

[04:14:14] That is what the prompt is. I just used Whisper to enter this prompt. We got the whole information right here. I click on the send button.

[04:14:24] Let us see what it is cooking up right now. You can see, it says updating GPT.

[04:14:30] So it's basically updating the GPT, so it's building the backend of the tool. You can see, already, it has built a bunch of UI. You see, there is this description that has come up.

[04:14:41] there is this, you know, little buttons that have come up, there's this little icon that has come up, all it has done by itself. And now it's asking me, vital tweet writer sounds good, it's asking me for her name. I'm gonna say, sounds good.

[04:14:55] So it's recommending me a name, I just say good. Now that I said good, look what happens on the right side.

[04:15:00] It's gonna update the name. Now it's generating a profile picture as well. So it's all doing, all by itself, in an agentic way. All I'm doing is I'm just talking to it on one side. On an agentic way, it's building everything on the right side. There you go, it has come with a profile picture as well, and you see it has updated as well. If I like this, I will be like, sounds good. If I don't like it, I can ask it to change it as well.

[04:15:24] For now, I'm gonna be, like, good.

[04:15:27] I don't want to waste time on generating a profile picture, but of course, right, you can say, I don't like it, do it like this, do it like that, and it's gonna do all that good work. But you can see, guys, all we said is we want a Twitter writer.

[04:15:39] We explained how we want it to be, and that's it. It generated a name, it generated a profile picture, it built the whole **** app for us.

[04:15:48] Isn't that wild?

[04:15:50] No.

[04:15:52] Now, it's asking me, let's fine-tune how it works. When it gets a topic, should it lean towards bold and controversial take, or more towards relatable and widely agreeable ideas? I'm gonna say, can I test it out?

[04:16:07] And give you feedback.

[04:16:13] That's what I'm gonna say. I want to test it out, you know? I don't want to, like, I don't want to give it feedback right now without even trying. I want to quickly test it out, and then I could give the feedback back to it, right? So that is what we're gonna do right now. It says.

[04:16:28] That's the best way to refine it. Go ahead and test it. So now, how do I test it? Well, simple. I come here to the right side, and I just give a topic. Let's say topic...

[04:16:40] AI will take away many jobs. Let's say that's the topic that I want to write a tweet on. Let's see what it comes up with.

[04:16:48] Guys, drop in a heart if you think this is cool. The moment I give a topic, all our app responds to is a tweet. AI won't take your jobs, it will expose how many were just busy work all along. The real risk isn't automation, it's being replaceable.

[04:17:06] Okay? It comes up with a banger of a tweet right away. I'm gonna say one more, let's see what it comes up with. AI isn't coming for your job. It's coming for the version of you that refuses to evolve. Aren't these really good tweets? Drop a comment, gold.

[04:17:21] If you think these tweets are actually golden, and it works really, really well. These are really good tweets, if you ask me.

[04:17:29] I'm gonna say one more.

[04:17:31] Somebody's like silver. So cute.

[04:17:35] People who think AI will steal jobs are missing it. AI is quietly rewarding those who learn faster than they fear. Man, this is such a good one. This is such a good one, I feel like I should post it on Twitter right away.

[04:17:50] But you get the idea, guys, you get the idea, right? What did we do?

[04:17:54] What we did was, we just asked it to build a tweet generator, and it is now coming up with great tweets. Now, I want to slightly tweak it. I want to slightly change it. You know, I have some feedback to it. One is that it's giving me these M dashes, which I don't like.

[04:18:09] Okay? Two is that it's giving too much of generic information, and I don't want generic information to come out. So what do I do? I come here to the left bar, and I'm gonna be like.

[04:18:19] Hey, I just tested out the tweet generator. It's pretty good, actually. I could rate it, like, a 7 out of 10. Now, what I want you to do is...

[04:18:27] A few things. One is that I want to make sure that you don't give a M dash in your output ever again. All my tweets should never have a M dash. It should be human, no one should be able to say it is written by AI. So don't use M-dashes. It gives it away.

[04:18:43] 2. I think the tweets are a little generic.

[04:18:46] I want it to be a little more relatable to my audience. You see, most of the people in my audience are people who are working professionals, or are entrepreneurs, and a few students, majorly, you know, all around the world, but majority of them on this session are from India. So come up with tweets that are relatable to people in India. Of course, you can openly use Bollywood references, cricket references.

[04:19:09] some Hindi words here and there to make it even more relatable, if that makes sense.

[04:19:14] And you know what? Every time I give you a topic, you're just coming up with one tweet now.

[04:19:19] I want to make it better. I want you to come up with 10 tweets every time I give you a topic, and not just that.

[04:19:26] You know what? If you give me 10 tweets at once, I will get, you know, over... overdone. So what I want you to do is not only come up with 10 tweets at once, but also rate each one of the tweets from a scale of 1 to 10 on the potential of it to go viral.

[04:19:43] So you rate each of the tweets from 1 to 10 on the potential of it to go viral, and also give me one-line reason

[04:19:50] On why you think a particular tweet will actually go viral.

[04:19:54] Right? So that I have an explanation as well. Because, I want to know why you think what you think. And also, give me the whole output in form of a table. In a way, the most high-rated tweet stays on the top, and it's ordered that way, so that I can read the first few tweets, and I can get the best ones out of the box. I want you to implement all these changes for me.

[04:20:16] Guys...

[04:20:18] I gave a list of changes, look at how many updates I gave. All at once. Because as I used it, I got a bunch of ideas. And I said, give me 10 tweets, rate each one of them from a rating of 1 to 10, give me a reason, give me the output in form of a table, don't make it generic, add some Hindi references, no M dash, and everything around it. And you know what? Look at this.

[04:20:40] Done. This is now a much sharper and much more powerful version. 10 tweets per topic, ranked on viral potential, with scores and clear vision, more India first, 0M dashes, fully human tone, try it with one topic and tell me what you want to test next. So it says, done.

[04:20:56] I wish humans worked this fast.

[04:20:58] But they don't, but AI can. Okay, I'm gonna come to topic again, and I'm gonna be like, AI will take away many jobs. Guys, I'm right now using GPT 5.5, which is currently one of the most advanced versions of AI in the world, so the outputs are insane, right? And look at this.

[04:21:16] It says, we got it.

[04:21:18] We got the output, like you can see, in form of 10 different tweets. Each of the tweets has a viral potential, and also a reason on why it could go viral.

[04:21:28] It says, AI won't take your job. Someone using AI will adapt fast or explain later. Awesome. Every generation had a job killer. This time, it's real. The winners won't resist AI, they will ride it.

[04:21:40] Look at this, it has given some Hindi references this time.

[04:21:43] In India, we used to say settle hojau. Now, it's upgrade hojau or get replaced. You see how it has started to use some Hindi references as well? And look at this, AI is like geo in 2026. Cheap, fast, and it changed everything overnight, jobs included. So it started to add Indian analogy as well, just because I said, make it relevant to my Indian audiences.

[04:22:07] Guys, if you think what you just learned is insanely powerful, drop a boom in the chat so that I know we are on the same page.

[04:22:16] Drop a boom in the chat so that we know... I know we are on the same page.

[04:22:24] Awesome.

[04:22:25] Awesome, awesome, awesome. All right. Perfect. Thank you.

[04:22:29] Now...

[04:22:31] This is very important, so I want your full attention on this right now. What do I mean by that? Well, there is an important caveat on what I'm teaching, and I want you to focus on this. What I'm teaching you at this point of time is not how to build a viral tweet right up.

[04:22:48] What I'm teaching you right now is a process.

[04:22:51] is a way of thinking, is a way of solving problems. Every time I teach you something, the way I want you to think about it is, hey, how could I use what WebHub just taught me?

[04:23:03] to solve what-all problems. I'm teaching you a viral tweet writer because everybody can understand what a viral tweet writer is. But the problems that you have.

[04:23:12] In your job, in the company that you run, as a college student at this point of time, you have to think about what are the problems that I can automate, that I can solve using this technology of building a custom GPT.

[04:23:24] And that is how I want you guys to think. I'm not teaching you how to build a viral tweet writer, I'm teaching you how to solve a problem by building GPTs. Do I make sense? If that makes sense, drop in a heart so that I know you got it.

[04:23:40] Guys, I don't want you guys to mentally think about the fact that, oh, what I learned at this point of time is how to build a viral tweet writer. That is what

[04:23:49] You know, everybody would do.

[04:23:52] I want you guys to think one level up.

[04:23:55] I want you guys to think, what are the problems that I can solve with this? Because as I teach you a bunch of things today, it is your job to convert these learnings into how you can apply this in your marketing job, in your sales job, in your software engineering job, in your operations job, as a founder that you're running an agency, as a founder that is running a SaaS company, as a founder that is running a local business. It is on you.

[04:24:18] to translate those learnings. And it is very, very important for you to have that mindset from right get-go.

[04:24:26] Drop a comment, MS, makes sense, if that made sense.

[04:24:31] MS in the chat. Makes sense in the chat, if that made sense.

[04:24:37] Yes, awesome. Looks like funny, we have a bunch of very interesting audiences today who are picking things like magic and super fast. I'm loving this.

[04:24:47] All right, let's get in, guys, let's get in, let's move on, because there's a lot more to learn. Because you guys have been so kind and nice and everything around it, and you've been so fast at grasping things.

[04:24:58] I'm thinking, maybe I teach you slightly advanced one as well.

[04:25:03] Do you guys want to go a little more advanced?

[04:25:06] Edwin's in the chat.

[04:25:07] What I just taught you is how to build a simple GPT.

[04:25:13] But you know what?

[04:25:15] This will put you in the top 5% bucket. What I want to put you guys is in the top 1% bucket.

[04:25:21] For that, I have to teach you stuff that is advanced.

[04:25:25] Okay, now that a lot of people want me to teach you guys what is advanced, let's get right inside of it. But before I teach you the advanced stuff.

[04:25:34] I wanted to tell you something.

[04:25:36] For you to be able to get the most out of AI, across anything for that matter, there is one thing

[04:25:43] That is very important for you guys to keep in mind.

[04:25:46] That is, you need to know how things work in the backend.

[04:25:52] Do I make sense, guys? You need to know how things work in the backend.

[04:25:59] Yes, And I want to show you exactly that.

[04:26:04] I want to show you how things work in the backend so that you learn, so that you understand, and figure out and make things work on how things work in the backend right now.

[04:26:16] So, what is that that we need to do? For you guys to understand how things work in the backend, well, you simply have to go to the configure button. When you dropped all these messages on the left sidebar, what was happening? How did this app get built, is what you need to understand. For that, I can simply go to this configure button.

[04:26:34] And you will see the backend of the tool. You can see the logo right here. I can click on this and upload a photo that I like. As simple as that. There's Viral Tweet Writer, which is mentioned right here. If I just change this to buy...

[04:26:47] WebHub Sacinti, here it comes. It gets changed right here.

[04:26:53] You can see the description is right here as well. I can just say by VS here as well, and here I can change this to 2.0. And you can see this, it all works the way it should, because this is the backend of that tool.

[04:27:06] Now, what is important, again, is the part which says instructions. When I click on the expand button of this.

[04:27:15] I want you guys to understand what this line of text actually is.

[04:27:20] This, my friends, is a prompt.

[04:27:22] Who the **** wrote this prompt? Well, you know what? ChatGPT ended up writing this whole prompt for us.

[04:27:30] And because of this prompt, we're able to get the results, we are able to get the kind of outputs that we are getting.

[04:27:38] Am I making sense? So everything that we spoke here, every feedback that we gave to AI, it understood. And you know what? Like a prompt, like a prompt engineer, it converted that whole information into a prompt here. And because of this prompt.

[04:27:54] The app is working the way it is.

[04:27:58] Isn't that genius? It's as simple as that. You can see, your GPT is a high-performance Twitter content writer. It specializes in going viral. It generates 10 distinct tweets. It includes the tweet viral potential of 1 to 10, one-line explanation. The goal of the user is to quickly identify the strongest options, which I told.

[04:28:16] You can see, often incorporate Indian-relevant context, such as startup culture, hustle mindset, cricket analogies, Bollywood references, occasional natural English phrasing when it enhances the relatability.

[04:28:31] You see, everything that we spoke, and a lot more, AI was able to understand, comprehend, and was able to convert that into a prompt.

[04:28:44] When I saw this for the first time, guys, a light bulb just turned up in my head. You know, I was like, wait.

[04:28:52] If AI can do this.

[04:28:55] It's a... it's a good prompt, but I can write a better prompt than this. If I want to build an advanced GPT, all I need to do is write an advanced prompt.

[04:29:06] And once I write an advanced prompt, I will be able to generate a much advanced GPT.

[04:29:11] Am I making sense? Now, when I peeked into the backend of the tool, I saw that everything works basis of this prompt. And when I read this prompt, while it was pretty decent, I knew that I can write a better prompt than this. And that gave me this idea that, wait.

[04:29:27] If I can write a better prompt than this, I can actually build literally anything that I want on top of ChatGPT.

[04:29:35] And that is what I want to teach you right now.

[04:29:39] So, for us to be able to build advanced GPTs, you need to be able to write advanced prompts, because the AI revolves around a prompt.

[04:29:50] And the reason why I'm giving you the storyline is also because this is how I want you to think about everything.

[04:29:59] I want you to ask this question every single time. If something works, why is it working? How is it working in the backend?

[04:30:07] What is that that I can do to make it work better, is a question that you have to consistently ask yourself, because you have to understand one thing. The tools that are available are the same for everyone.

[04:30:20] If you want an unfair advantage, you need to figure out a way on how to get the most out of the tool that your friend is using as well.

[04:30:28] If that makes sense, drop in a heart.

[04:30:32] You have to figure out a way, understand how the tool works, so that you can push it to the limits. As a result, the kind of outputs you can get from the same tool that your friend is using is 10 times better.

[04:30:46] That is the mindset that we need to operate on.

[04:30:49] And that is what I want to show you today as well.

[04:30:54] Okay? Now, coming back to this, I told you that we can build an advanced GPT if we write an advanced prompt. Now, before I end up writing an advanced prompt, I want to show you what an advanced GPT is gonna look like.

[04:31:08] So guys, this is one of the advanced GPTs that I personally use. It's called as the Web of Sissinti Style Post LI...

[04:31:18] internal. It's an internal app, built for my team only.

[04:31:22] What does this app do? Well, this app...

[04:31:25] is designed to write LinkedIn posts for me.

[04:31:29] So, if I give a topic to this, it's gonna write a killer LinkedIn post for me.

[04:31:33] Now you'll be like, Webha, what is a big deal? You built an app which can write tweets, now it's writing LinkedIn posts, big deal. No, there is one difference.

[04:31:41] And you know what that difference is?

[04:31:43] This app writes LinkedIn posts exactly like me.

[04:31:48] It replicates my style, it replicates my tone, it replicates the structure of my sentences, it uses similar words that I use, it flows like I do, it is so **** good.

[04:31:59] That even I can't say if it is written by me, or if it is written by AI. In a world of AI slop all over, where everything looks AI-generated, it is important for your content to stand out. And for your content to stand out, it needs to have your own flavor. So, I've found the best of both worlds. I get AI to write my content, but it is written exactly like me, so that it doesn't

[04:32:22] stink AI.

[04:32:26] How many of you guys agree that this is going to 10x you? 10x in the chat?

[04:32:31] That you're able to get AI not just right for you, but write exactly like you.

[04:32:36] And to make this happen, right? To make this happen, you need an advanced bid.

[04:32:43] And that is what I'm gonna teach you right now. I'm gonna show you how I built this advanced app.

[04:32:50] Well, you know that already. If I go to Edit GPT, because I own this, I told you already that I wrote my own prompt.

[04:32:58] And that is how I ended up building this advanced GPT. Now, let me show you the prompt.

[04:33:04] Guys, this is how the prompt looks like.

[04:33:07] It has something called as role.

[04:33:09] It has these hashtags and starts and whatnot. It has something called as objective. It has something called as context. It has something called as instructions. And not just that, let me start scrolling this. Look how long the prompt is.

[04:33:24] I keep scrolling, it keeps coming.

[04:33:27] This is exactly why it is able to give me the kind of outputs that I want to.

[04:33:34] And this is what I want you to learn.

[04:33:37] How many of you guys want to learn how to write prompts like this?

[04:33:48] I also see a lot of messages of people asking me, is this webhub, or is this AI agent? Is this live, or is this recorded? I see a lot of questions of people all over, I'm just ignoring it, but let me tell you guys one thing before I move on.

[04:34:03] And I want you guys to answer me as I open the chat as well. Does it matter if I'm AI or am I real?

[04:34:10] Does it matter if this is live, or is this recorded, or this is completely AI-generated?

[04:34:17] what should matter in a reality is, are you learning or are you not learning? You see, people who are not serious about things always look for reasons on how to give up and what to give up on.

[04:34:30] So they're looking for reasons to give up on things.

[04:34:34] So, I'm not even going to say if I'm AI or I'm real. I'm not even going to say that this is live or recorded. Let's say this is recorded, I'm completely AI-generated. Okay? If you want to learn, you can be on the call. If you don't want to learn, you don't want to learn. Stop giving yourself reasons. Does that make sense?

[04:34:54] Make sense in the chat, guys. Make sense in the chat. It's so funny. It is so funny that people work and look for reasons to give up, look for reasons to exit, look for reasons so that they don't have to put in hard work.

[04:35:09] If those are the reasons that you're looking for, I gave you all the reasons. Drop off.

[04:35:13] People who are here on this call are people who want to learn, and those are the kind of people I want to continue to have on these sessions.

[04:35:22] Yes, awesome. Love it.

[04:35:25] Okay, guys, coming back. Okay, coming back to this. I'm going to turn off the chat. This is why I keep my chats off, because I get distracted, right? And I don't want to get distracted. Okay, here we are back.

[04:35:35] We need to learn how to write prompts like this.

[04:35:38] Now, for you guys to learn how to write prompts like this, you need to learn a new prompting structure.

[04:35:43] And that new prompting structure is called as the markdown prompting.

[04:35:49] The moment you learn this new prompting structure, you will be able to write prompts like that.

[04:35:56] How many of you guys want to learn the ability to write advanced prompts like the ones that I showed you? Drop in a heart.

[04:36:03] You want to learn, right, how to write those advanced prompts. For all those people who are wondering, dude, this is too long, this looks too, you know, advanced, I can't do it. Let me tell you one thing.

[04:36:16] I'm going to...

[04:36:18] If you give me your next 30 minutes focus, fully focused for the next 30 minutes, I will make sure you will learn every single bit of this.

[04:36:28] I will make sure in next 30 minutes, each and every one of you will be able to write a prompt like this, as long as it takes, and you're gonna kill it.

[04:36:36] But you know what? Do you have the attention for the next 35 to 40 minutes without fluctuating?

[04:36:43] is on you, okay? I'm gonna do my best to be able to make sure everybody can learn.

[04:36:49] Alright, let's... before we start writing the prompt, what we're gonna do is, I want you guys to understand how this prompt actually works.

[04:36:56] Because without that, you can't really write the prompt, right? So, let me explain you what markdown prompting is. So, guys, markdown prompting is this special prompting technique that is designed

[04:37:09] for specially building AI agents.

[04:37:12] It is designed in a way that AI can literally understand what you want it to do in the highest clarity possible.

[04:37:20] And I'll give you a trick. Every time you're thinking about writing a markdown prompt, or any prompt for that matter, the way I imagine things is that, hey, you know what? I am actually

[04:37:33] talking to a human on the other side. I just, let's say I imagine that I hired someone who is the topper of all India ranked IT rank number one. This guy finished his computer science engineering, let's say, in IT Bombay, and I've hired that person. He's very smart.

[04:37:49] He understands very, very good things. He's very good with complex reasoning.

[04:37:53] But you know what?

[04:37:54] There's... there's a constraint. This person is gonna work for me forever.

[04:37:59] But he comes with one constraint, that I can only talk to this person once in my life.

[04:38:05] I get a few hours with this person, I have to explain this super smart person everything about his or her job in just one hour.

[04:38:13] And that's it.

[04:38:15] Whatever I explain, whatever the person understands, is how the person is gonna do the job for the rest of his life. If this is a position I'm in.

[04:38:24] How would I write my prompts? How deeply would I think? Because I have a very smart person to work for me.

[04:38:30] But that person can only work really well if I explain his or her job really, really well.

[04:38:37] That is how I think about writing a prompt.

[04:38:40] And a prompting structure like Markdown Prompting actually helps me quite a lot.

[04:38:48] What do I mean by that? Well, you know what happens with markdown prompting? Is that, you see, there is something called as role, objective, context, instructions, and notes.

[04:38:59] These are basically sub-headlines for you to be able to capture information. So what is role? Role is where you tell AI how you want it to behave.

[04:39:10] That's it. So, you've already learned about role, probably, in the magic prompt formula, where you'll be like, you are in... let's say I'm building a agent for customer success. The job of the agent is to reply to my emails and solve customer issues of outskill.

[04:39:25] So, the role in this case is going to be where I tell AI to act like a specific person. And that hat I want AI to wear for me is, I'm going to be like, you are an expert customer success executive who has worked for top consumer brands like Amazon, Google, Netflix.

[04:39:44] And you have more than 15 years of experience in customer success. So the moment I say this is your role, AI understands. AI, instead of thinking about everything that it knows.

[04:39:54] it basically puts two planks around its face and says, I'm gonna focus, I'm gonna be focused, and I'm gonna behave like I'm an expert in customer success.

[04:40:05] That is what AI does, and that is exactly what a role is.

[04:40:08] Next comes objective. In objective is where you explain AI,

[04:40:14] What do you want AI to do for you?

[04:40:17] Or the task. In this case, I'm going to be like, your job is to reply to emails of all the outskilled learners. You know, every time they have a doubt, every time outskilled learners have a doubt, they will write a question to you. Your job is to understand the question and respond back to them. That is the task. That is the objective. It's as simple as that.

[04:40:37] Next comes context. Now, context is something that is very, very important.

[04:40:43] What do I mean by that? In context is where you tell AI how you want it to behave, and why is that the thing that you are given AI as a task is a very, very important task. What do I mean by that? Well.

[04:40:59] Let's just flip the script and go back to the human example. Let's say I hired this very top IT, you know, or AIR ranked number one, right? All India ranked number one guy, I've hired him, and I tell him that your job is to reply to emails. The guy is gonna be like, bro, what the *****

[04:41:17] I just stopped IIT. I went to IIT Bombay to clear, and I was the topper of my badge. You hired me, saying that you have something very important for me to do, and all you want me to do

[04:41:30] It's basically to reply to emails.

[04:41:33] Bro, I can do a much better job than that. Why do you want me to do customer success? Replying emails, anybody can do it. And this is where I have to tell

[04:41:42] this super expert, why I've given him or her the job. Here, what if I start explaining, saying that, bro, what you're not understanding is that you think this job is about replying to emails.

[04:41:54] But let me explain you. The job that you've been given has a direct correlation to the growth of the company.

[04:42:01] He'll be like, what do you even mean by that? Well, I'm gonna be explaining him, saying that, look.

[04:42:06] Millions of people, every single month, join Outskill programs. And when they join these outskill programs, right, they have doubts, they have questions, and for all of these things, they write us an email to hideTheRateOutskill.com. And when they write those emails to us.

[04:42:24] If we are not able to do a very good job responding to those emails.

[04:42:29] They're not gonna have a great experience.

[04:42:31] As a result, there's a very good chance they will not even join the mastermind. And if they not even join the mastermind, they'll not even experience the true power of outskill.

[04:42:40] And they don't even experience the true power of outskill. They will never talk about outskill to their friends.

[04:42:46] And you know what? For any company to grow really, really fast, there has to be word of mouth. And the way Outskill does word of mouth is by giving incredible value.

[04:42:56] So, if people can't even experience it, how will they get value? If they don't even get value, how will they talk about their friends? If they don't even talk about outskill to their friends, how will the company grow?

[04:43:07] So, if one thing gets broken of not solving their problems, the growth of the company gets slowed down.

[04:43:16] And that is exactly why I've given you the job of customer success, because I believe it's a very, very important job, and it depends on how well you do your job, that is how fast the company will grow.

[04:43:32] And that is exactly why I want you to do this job. Guys, don't you think if I give a context like this to anyone, they will be able to do their job 10 times better? Drop in a heart.

[04:43:44] This is what is context. Explaining AI why what it is doing is important. The better your context that you give, the better an AI actually performs.

[04:43:57] That is what, essentially, context is. Now, coming to the next thing, which is instructions.

[04:44:03] Instructions is where you define simply what you want AI to do. Step 1, write, read the email. Step two, understand what's on the email. Step three, solve their problem. Step four, if you don't understand what they're asking, ask the message on the Slack, get the clarity. Step 5, solve the ticket. All the instructions, one step at a time, whatever you have to mention, you put it on instructions.

[04:44:23] And finally comes notes.

[04:44:25] Notes is actually quite simple. Notes is where you capture Basically.

[04:44:32] what you were not able to capture in role, objective, context, and instructions. Let's say you wanted to share something with this AI in form of a prompt, but you were not able to put it in any of these buckets.

[04:44:42] So notes is a very interesting place where you can quickly summarize things, put things that you think are very, very important and AI needs to remember, or there are things that you could not put anywhere, you put it under the notes.

[04:44:54] So guys, that is what the structure of markdown prompting is. That is what role is, objective is, context is, instructions is, and finally, what notes are.

[04:45:04] Now comes a very big question. Webhub, what the **** are these hashtags and stars?

[04:45:11] How do they even work?

[04:45:13] Why do we have them? Well...

[04:45:16] This, my friends, is a secret coded language for us to talk to AI.

[04:45:22] What do I even mean by this? You see, when you saw this slide for the first time.

[04:45:28] You saw this slide for the first time.

[04:45:30] I'm pretty sure the things that you went... that your ICE went to was probably the special prompting structure custom GPTs first, this way your eyes automatically went to, or this line called as the markdown prompting.

[04:45:43] Your eyes automatically went to markdown prompting or Special Prompting Structure Custom GPTs first. The reason? The size of the font was large.

[04:45:52] So, our human minds are tuned that if something is important, if something is very, very important, we will basically put it in a large text. We will bold it. We will underline it. But when it comes to AI,

[04:46:07] All these things don't work.

[04:46:09] For example, we had this prompt.

[04:46:12] Let's say I want AI to remember that high-performance Twitter content writer that specializes. Let's say this is a very important word for me. Can I make it bold? I don't have that option. Can I increase the size of the font? I don't have that option.

[04:46:29] Because prompts are sent in text inputs.

[04:46:34] It is only plain text, but there's a coded way of telling AI.

[04:46:38] This is a coded way of showing AI something in bold. You know what that is? If I put a word between two stars like this.

[04:46:51] You know what happens?

[04:46:53] AI imagines that this word is in bold. You can't say that in bold.

[04:46:59] But AI actually imagines that this is in bold.

[04:47:04] It looks at it, like, as if it's on board.

[04:47:07] Now, let's say each row includes a very important headline for you.

[04:47:12] You want the size of the font to be larger, but you can't increase the font size, so what do you do? Well, you simply come here and put a hashtag in front of it. The moment you put a hashtag in front of it, AI imagines this whole line to be a headline, which is called as a headline 1. It's the largest font possible.

[04:47:33] That is single hashtag. In the same way, let's say this is also a headline, but you don't want it to be as large as this. What do I do? Well, I simply come and put two hashtags. The moment I put two hashtags.

[04:47:46] AI imagines this to be a headline, but smaller than one hashtag. So one hashtag is the biggest font possible. Two hashtags is still a headline, but smaller than the H1, or one hashtag. If I put three hashtags, it's called headline 3, which is still a headline, but smaller than one hashtag and two hashtags.

[04:48:07] And whenever I put a word in... inside of stars, it is imagined as bold. Guys.

[04:48:15] This is what Markdown formatting is.

[04:48:20] One hashtag, look at the size of the text. AI imagines that to be a big headline.

[04:48:24] Two hashtags, AI imagines still that to be a big headline, but smaller than H1. When you put three hashtags, AI imagines that to be a headline 3. Smaller than H1, smaller than H2, but still a headline. And whenever you put a word between two asterisks, AI imagines that in bold.

[04:48:43] This, my friends, is what called as the markdown prompting.

[04:48:51] Drop a boom in the chat, guys, if this is insane.

[04:48:55] There is a coded language with which you can tell AI what is important, what is not, and with the structure that you have, you can explain AI in depth what you want it to give you as well.

[04:49:10] Yes?

[04:49:11] Awesome. Now, I still know, and I can still read a few messages, where people were asking, Webhav, can you please repeat it?

[04:49:19] Can you please tell us again?

[04:49:21] I get it. You know what? What we're gonna do right now is, we're gonna jump onto an example.

[04:49:26] We're gonna write or build an example right now so that you basically understand how to write a prompt like this.

[04:49:34] So let's do an example right now. And for the example that we want to do, I thought we should build, or rebuild, the LinkedIn post write-up.

[04:49:43] In my style, so that you can learn in this process how to build an advanced GPT. Now, the reason why I want to pick this example is also because of one more reason, that it is, this is actually an advanced GPT. It's not even, like, basic to intermediate. This is intermediate to advanced GPT, because this is a complicated GPT, actually.

[04:50:01] And if you end up understanding how I build a GPT like this, I truly believe you can pretty much solve any problem out there.

[04:50:09] by writing Markdown prompts. That is exactly why I wanted to pick this as an example.

[04:50:15] Sounds good? Let us rebuild this LinkedIn post writer, which can replicate your style of writing. Give me a thumbs up.

[04:50:28] Alright, let us do that right now, guys. Let us do that right now. So, what do we go about, what do we do for us to be able to write a prompt like this?

[04:50:40] Now, I'm gonna give you something that's gonna shock you right now. If you guys were thinking, I'm gonna write this whole prompt, something like this, all by myself, that is not true.

[04:50:52] I'm gonna get AI.

[04:50:54] To write the whole prompt for me.

[04:50:57] Yes.

[04:50:58] Surprise, surprise, we're gonna get AI to write the whole prompt for us, but it comes with a twist.

[04:51:05] It is not what you think.

[04:51:07] I'm not just gonna go to AI, and I'm not gonna be telling AI, hey, write a prompt for me for this. It's not going to work.

[04:51:15] I'm gonna use...

[04:51:16] a proprietary workflow that I have built for myself that allows me to literally not only build prompts, but literally anything out there.

[04:51:27] What I'm gonna teach you is a workflow right now on how to go about solving problems using AI.

[04:51:36] And in that workflow, we are gonna solve a problem today. And what is that problem that we're gonna solve? We're gonna solve the problem of building an app

[04:51:45] Which can replicate the style of writing.

[04:51:49] and write LinkedIn posts for me. And we do that by using AI. What you're gonna learn right now is something called as thinking with AI.

[04:51:59] Guys, I want all of you guys to drop this in the chat. Thinking with AI. Drop it in the chat. Because I want you guys to remember this very, very well. Because thinking with AI is that one thing, if you learn.

[04:52:12] It will change the way you use AI forever.

[04:52:15] And I can guarantee you that.

[04:52:17] So the next 30 minutes.

[04:52:19] is probably going to be the most powerful, life-changing hack of AI that you're gonna learn.

[04:52:27] It's called Thinking with AI.

[04:52:29] This is how I go about solving problems, by thinking with AI, okay? So what is a problem statement, guys? The problem statement, let's write it out, let's use ChatGPT like a note app here, okay? The problem statement.

[04:52:44] Problem that we have is... We want AI to write LinkedIn posts, in my own style.

[04:52:54] That's the problem statement. So when I think about solution, this is me thinking about a solution, I need to break this problem down into smaller problems. That is how best of problems are solved, okay? So I'm gonna break down this problem into two problems right now. P1 is basically right

[04:53:12] LinkedIn posts, Using AI.

[04:53:17] This is problem number one.

[04:53:19] And problem number two, inside of the main problem is, write like me.

[04:53:25] There are two problems that we need to solve. So the moment I break this problem down, I see two problems. One is that I need to get AI to write like me, which is, I feel, is much more simpler. The second is that it needs to write like me.

[04:53:37] Now, I know how to do this.

[04:53:40] This is done, because I've learned how to write the Twitter generator, so I know how to do this. What I don't know is how to get AI to write like me. So what is the solution?

[04:53:52] to P2, which is the problem number 2. What is the solution? Well, I need to tell AI

[04:54:00] how I write.

[04:54:01] This is what I need to solve for. If I tell AI how I write, it will understand how I write, and then it can write like me.

[04:54:09] Now, I'm with a new problem. The moment I'm trying to solve for P2, there's a new problem that is coming up.

[04:54:15] The problem, the new problem is...

[04:54:19] How do I tell AI how I write?

[04:54:23] Because if you think about it, let's say if you want to explain anyone, including AI, on how you write, you're gonna be stuck, my friend. You're gonna be like, I write in simple English, I write in plain English, I write like I speak, and you will give, like, arbitrary garbage like this, which will not help any AI to write like you.

[04:54:42] Because AI needs the nuance, AI needs the specifics.

[04:54:47] How do I tell AI how I write? Well, the new solution To the new problem.

[04:54:54] is... What if I ask AI to tell me how I write.

[04:55:04] You see, how I'm trying to solve one problem?

[04:55:06] Breaking the problem down, trying to solve it, that is leading to a new problem, and then trying to come with a solution. That is leading to a new problem, but this is what humans are supposed to do going forward. This is problem solving 101. This is the future of our jobs. Well, the new problem is

[04:55:24] How do I tell AI how I write? And the solution that I came up with is, I will ask AI to tell me how I write. Now you'll be like, Webhav, what the... what is this nonsense? How will AI know how you write? If AI knew how you write, why did you have to tell it in the first place? Well, here's what I mean.

[04:55:41] I will ask AI to tell me how I write. Well, what if I give a bunch of content that I have personally written in the past?

[04:55:49] I give that to AI.

[04:55:50] And I'll be like, bro, this is how I write, okay? Now, I want you...

[04:55:56] to go through all this content, and you tell me how I write.

[04:56:00] Won't I get a report out of this?

[04:56:02] a much more advanced, extensive report of AI telling me how I write.

[04:56:08] Guys, if you're able to understand what we are doing, drop in a heart. We are doing Problem Solving 101 with AI.

[04:56:16] We're slicing and dicing the problem to smaller pieces and bits.

[04:56:20] And then, we are basically getting AI to solve that for us.

[04:56:26] That is how we are rolling at this point of time.

[04:56:30] Right? So, let us do that right now.

[04:56:33] What we're gonna do is, first, I need a report to understand how I write my content. So, I'm gonna ask AI to tell me how I write. So, what I'm gonna do, I'm gonna quickly come here, and I'm gonna write a prompt like this.

[04:56:48] You are an expert content analyzer.

[04:56:52] What I'm gonna do is, I'm gonna give you a 10 of LinkedIn posts that I have personally written in the past, and these have gone viral on LinkedIn. What I want you to do is go through all these 10 LinkedIn posts.

[04:57:04] and understand how I write, and give me something called as the content DNA of me.

[04:57:10] What do I mean by that? You see.

[04:57:13] I want you to tell me exactly how I write my content, how I write my hook.

[04:57:17] how I write my body, how I write my call to action, the kind of words that I use, the way I frame sentences, the way I use emojis, the way I use so many other things to write content on my LinkedIn. You see, I end up writing content in a way I do, and I don't know why I do what I do. And I want you to tell me in that content DNA report of mine.

[04:57:37] You see, I also want you to tell me stuff that I don't know about my writing. I'm sure I'm doing a bunch of things subconsciously, even not realizing what I do. I want you to find all those hidden patterns, and literally tell me how I write my LinkedIn content. And on top of that, something very important that I want you to do for me.

[04:57:55] is that, you see, all the content that I'm sharing with you right now are content pieces that have gone viral on LinkedIn. So understand why these content pieces have gone viral on LinkedIn, and capture those learnings as well.

[04:58:08] So that the content DNA framework that you're gonna give me.

[04:58:12] Has everything captured, and it is super detailed, and I don't have to break a sweat, and I can give that report to any ghostwriter, and the ghostwriter should be able to replicate my style in a single click.

[04:58:25] This is what I want you to do. Did you understand? Guys, that is the prompt, okay? I wrote everything.

[04:58:34] And, Luke, I want you to read the last line that I put.

[04:58:38] I asked the question in the end. Did you understand? I'm gonna say, explain me

[04:58:44] what you understood. I always say this. I always say this. I always say, you explain me what you understood.

[04:58:53] And look at this. It understood.

[04:58:55] It said, this is exactly what I understood. You're gonna give me 10 of your LinkedIn posts. My job is not to summarize them, but reverse engineer your writing brain.

[04:59:04] I'll break it down into two levels. Your Content DNA, it's gonna do all this good stuff for me, and why my posts go viral, and it's gonna give me the final output, called the WebHub Content OS.

[04:59:18] It says, drop the tempo. So the moment I say, explain me what you understood, I want to make sure AI and I are on the same page.

[04:59:26] What if I'm saying something and AI understood something, as I don't want that to happen? I want AI to be on the same page, and that's exactly why I always ask AI, you tell me what you understood.

[04:59:37] And there you go, it understood a lot of things. Now, I can simply drop a bunch of LinkedIn posts, and I can see here are the posts. So what I've done is, I've already copied 10 of the LinkedIn posts that I've written in the past. And I just pasted it here, and I said, here are the posts, you can see this, it's right here.

[04:59:58] You can see this, they are all right here, right? And I'm gonna click on the send button. Now, if you have the paid account, I will recommend you to turn on the thinking mode, because thinking mode eventually gives you better answers.

[05:00:11] Okay? Or, if you don't have it, you can keep it on instant as well. Now, I keep it on instant considering that most of you people don't have the paid account, and look at that.

[05:00:20] it has started to give the whole content DNA framework, guys.

[05:00:26] Your con- your core content style.

[05:00:29] You write like business storyteller, explaining a trending event to smart but busy people.

[05:00:35] Big news, dramatic hook, simple business breakdown, white matters, open-ended question. Your hook DNA, big brand, dramatic verb.

[05:00:44] Shocking emoji. Curiosity bridge. Your body structure.

[05:00:48] Step one, explain the event. Explain the business reason. Use bullets or numbered lists. Add so what? Your CTA DNA.

[05:00:57] Your vocabulary, these are the kind of words that I use.

[05:01:01] Look at that, all the kind of words I use very commonly. The sentence DNA.

[05:01:07] Guys, all here. The emoji DNA. Hidden patterns you may not even realize.

[05:01:12] It's all here, guys, it's all here. Look at how crazy the report is. It goes on and on and on, and the final diagnosis says, your content works because you're not writing like a creator. You're writing like a founder, watching the market move in real time. Your voice is curious, dramatic, simple, analytical, slightly playful, business-first, and prediction-driven. Your signature style is, here is big thing happen.

[05:01:37] Most people are seeing the headline. I'll show you the business engine behind it.

[05:01:41] That is your content DNA.

[05:01:43] Guys, if you think this was mind-blowing, drop a MD in the chat.

[05:01:48] Do you think it is even humanly possible for us to write a prompt like this, for us to get a content like this, or explain our style of writing like this? Do you think it is even humanly possible?

[05:02:05] I don't think so either.

[05:02:07] I don't think so either.

[05:02:10] That, my friends, is the power of this.

[05:02:14] Now, now that we have the content DNA report.

[05:02:18] I'm gonna show you one little nice hack right now to make this even better.

[05:02:22] You see, let's say I want this content DNA report to get even better. What do I do? I'm gonna simply come here, and I'm gonna be like, hey.

[05:02:29] I just read the content DNA report, you know what? It's pretty good. It's definitely an 8 out of 10. But you know what? I gave the same task to Claude.

[05:02:38] And Claude came up with a report, which is like a 9.5 out of 10. I thought GPT 5.5 is better than everything else.

[05:02:45] ChatGPT is better than everything else, but Claude actually beat you. I'm gonna give you one more chance to beat Claude. I want you to think harder, understand if there are any gaps that you missed out on, and come back with the Content DNA framework, which is definitely a 10 out of 10. Go work hard, and come back to me with the final report.

[05:03:04] Guys, what did I just do?

[05:03:07] I just said Claude is better than you.

[05:03:10] I got Claude to do the work, Claude did a better job than you, and I want you to do better, and look at this.

[05:03:16] It says your push is right, the earlier version captured obvious patterns, but it didn't go deep enough into the mechanics, like tension design, post-pacing, subconscious defaults, repeatable writing rules, and what a ghostwriter should never break.

[05:03:29] And it says, you're right, the last report was good, but still too observer level. This one goes deeper, and guys, here comes an even more deeper report. You see how our Indian parents are, right? They're never happy with the scores that you get at your school.

[05:03:45] Even if you're first in your class, they'll be like, why aren't you first in the state? If you're first in the state, they'll be like, why aren't you first in the whole universe? That is how you have to act with AI as well.

[05:03:55] You have to act like a very, very tough parent. And the kind of outputs that you'll get will be insane. And you see, this report is much more deeper, much more intensive, much more longer, captures a lot more things.

[05:04:10] That's a little hack that I wanted to show you. And you know who I learned this hack from? I actually learned this hack from Larry Page, the founder of Google.

[05:04:17] I was watching one of his podcasts, so I credit where it's due, right? I was watching one of his podcasts, and he told something like this, that every time you scare AI, it comes up with better outputs. I'm like, let me try! And I tried, and it worked, and I'm teaching you right now, so that you can use as well.

[05:04:34] So, guys, there are two things that I taught you today.

[05:04:37] Very, very small things. Number one, that I want you to remember is...

[05:04:41] Always ask a question on what AI understood.

[05:04:44] You remember when I asked it, I was like, please explain me what you understood. That is important.

[05:04:50] So that AI and you are on the same page. And the next is, always push AI, if you're doing something important, always push AI to work harder.

[05:04:59] And you often get better outputs as well. I want you guys to remember these two things. Little, little hacks, but these are the things that I've learned over two and a half years. I'm giving them to you.

[05:05:09] So that you can pick them up, and the kind of outputs that you get fundamentally changes. Okay? Any which ways, we are here. We have the content DNA report right now. Now, what we need is a prompt. So, I open a new ChatGPT window. I'm gonna act like... one second, guys, I want to turn off the history, because,

[05:05:31] Where is history? Where is memory? Yeah. I want to turn off the memory so that it is not taking up from the best practices, and you're actually seeing what you will see. Because in... if I turn on the memory, right, I've already told AI a bunch of things on how I want ChatGBT to work for me. As a result, it might not show you all the real things.

[05:05:51] So, when I do something, you will see a different output. When you do it, you will see a different output. And I don't want that to happen. As a result, I turned off the memory so that both of us will get similar outputs, so that you're not confused.

[05:06:03] Okay? Now, coming here, I wanted to write a prompt right now. So I'm gonna come here, and I'm gonna be like, you are an expert prompt engineer who has written a ton of prompts.

[05:06:16] for, custom GPTs. You work in the chat GPT team. You have 10 plus ex- sorry, not 10 plus, AI is not even 10 years old, so you have 4 plus years of experience in writing incredible prompts.

[05:06:28] What I want you to do is, write an incredible prompt which can replicate the style of my writing, and write viral LinkedIn posts. So every time I give you a topic, your job is to come up with a LinkedIn post on that topic which has very, very high chances of going viral.

[05:06:47] And, something that I want you to remember here is that

[05:06:51] You need to replicate my style of writing when you're writing the content. For you to be able to replicate the style of my writing, what I will do is, I will basically give you

[05:07:01] my content DNA analysis, the whole report which captures how I write my content.

[05:07:10] So, when you're writing this prompt, I want you to read the content DNA analysis, understand how I write, incorporate all those things so that even a custom GPT can write exactly like me on any topic. That is the job that I want you to do. Did you understand?

[05:07:28] There you go. I always say, did you understand? Here it comes. Did you understand? I click on the send button. Let it tell me what it understood. And here it comes. It understood exactly what I want.

[05:07:40] It says, once you share the content DNA analysis, it will give me the full prompt. So what do I do? I will act as if I have written the full report, come back here, and I'm gonna share the content DNA analysis.

[05:07:59] I just typed analytics, but that's okay.

[05:08:02] Okay, I forgot how to type, guys.

[05:08:05] It says, this is solid, your content DNA is very clear and very applicable, I'll turn this into actually what you asked for, and folks, look at this. Drop in a heart. Here comes the prompt. It has something called as role, core objective, master structure.

[05:08:22] Literally breaking down the structure for me, Everything around it.

[05:08:27] Look how awesome this is. What you just built, and everything around. So it ended up coming with a prompt.

[05:08:34] Very, very cool prompt, but you must have realized one thing. This prompt is not in the Markdown formatting. It is long, it is detailed, but it's not in the Markdown formatting. So what do you do?

[05:08:45] I told you it needs to be in Markdown formatting for you to get great output, so what do I do? Well, I do something very, very simple. I'm gonna come back.

[05:08:57] Copy this prompting structure, Go open ChatGPT again.

[05:09:02] paste this prompting structure, and I'm gonna be like.

[05:09:07] come to the top, and I'm gonna be like, hey, thanks for the prompt, but can you rewrite the whole prompt in the structure given below?

[05:09:14] That is the prompting structure that I want the prompt to be. Feel free to add your own headlines if you want to, but I want at least the structure to be intact. So rewrite the whole prompt without losing the impact of it by using this structure for me.

[05:09:31] There you go, guys, and here is the structure, and I click on the send button.

[05:09:36] And look at this! Got it. It now says, roll objective, context.

[05:09:44] instructions, instruction 1, 2, 3, all of those instructions as well, and we have the whole prompt coming up right now in the format that we want to. But still, still, still, there is something missing. What is missing, guys? Let me know in the chat, I want to know if you guys got it. What is missing? The prompt is here, but there is something missing.

[05:10:03] Yes. Where is the markdown format?

[05:10:07] Now, you can see, it has increased the size of the font.

[05:10:11] It has... it is headlines.

[05:10:13] It has bolded the text, but where are the hashtags and stars? Well, this is exactly why I removed the memory.

[05:10:21] Because I wanted it to come like this.

[05:10:24] You know, the reason why it came like this is because we are using ChatGPT. ChatGPT is not built for advanced users like you and me. ChatGPT is built for everyone to use. As a result, it is not smart enough to understand that you might require the prompt with actual markdown.

[05:10:43] So, it is not optimizing for that. So, but you want the hashtags and stars, so you just have to say this line. Give me

[05:10:52] The prong.

[05:10:54] In a code editor, Or a code block, So died.

[05:11:00] the markdown Format is retained.

[05:11:06] When you write a line like this.

[05:11:10] When you say, give me the output in a code editor or a code block, That is when.

[05:11:19] That is when, guys, you will get the output with hashtags and stars, and look at that!

[05:11:26] I said, give me the output in a code editor or a code block, so the box that you're seeing right now is a code editor or a code block. As a result, look at this.

[05:11:36] Drop a boom in the chat. We are now getting the prompt with the hashtags and the stars.

[05:11:44] And folks, we have our prompt ready.

[05:11:51] Guys, was this process insane?

[05:11:54] Was this process then? Drop a wow emoji. Respond to me with a wow emoji so that I know you understood the power of this. I told you, it's gonna change the way you're gonna use AI forever. Because the moment you learn how to think with AI,

[05:12:09] You're gonna think like a different beast altogether.

[05:12:14] Right?

[05:12:15] Awesome. Now that we have the prompt, I'm gonna copy the prompt, Come back to ChatGPT.

[05:12:22] and build a GPT right now, right? Click on the sidebar, click on Explore GPTs, click on the Create button, and this time, I'll directly jump to Configure.

[05:12:32] And I will paste all the instructions. There you go. All the instructions are now pasted. I can call this the LinkedIn

[05:12:47] post-writer...

[05:12:51] via style for LinkedIn, and I can say something like this. And you know what? There's one little hack that I want to tell you. There is something called as knowledge that is right here, where you can upload a file

[05:13:03] So, you remember, right, we have this, we gave AI a bunch of LinkedIn posts, of mine.

[05:13:10] What if... I want all of that in form of a PDF, right? So I can just open docs.google.com.

[05:13:21] I think it'll probably ask me to log in because I'm incognito, so I'll go here.

[05:13:26] I'll just go to docs.google.com.

[05:13:30] Create a new doc.

[05:13:33] and paste, you can see the whole LinkedIn post is pasted here, and I'm gonna say sample... LinkedIn posts.

[05:13:42] And I'm gonna... Download this as a PDF,

[05:13:48] I'll tell you what I'm doing, and then I'll do one more thing, okay? I'll create a new document again.

[05:13:54] And I will say, Content, DNA, framework of Web HubSicinity posts.

[05:14:03] And you remember, right, the ContentDNA framework that we got? Guys, you don't have to do this, but I do this so that I can get the best possible output ever, ever, ever.

[05:14:13] Alright? So, here it comes.

[05:14:17] So this was our content DNA, right? I'm gonna copy this content DNA that we used to make a prompt, and I'm gonna paste it right here, so the whole content DNA is here.

[05:14:26] Right? And I'm gonna download this as well as a PDF.

[05:14:30] Now, with the prompt, what I'm doing is, with the prompt.

[05:14:35] inside of Custom GPT with the prompt, I'm also uploading the sample LinkedIn posts And also.

[05:14:45] the Content DNA Framework.

[05:14:48] Funny, just FYI, Okay, okay, okay, that's okay. I just heard beeps.

[05:14:55] Because of, you know, compute usage. I don't know if you could hear it. Because of beeps, I thought my computer could restart, so I just wanted to bring you in, saying, my computer can restart, so be around, but it looks like it stopped. Okay.

[05:15:12] Okay, guys, where is that? Where is that? We just downloaded it.

[05:15:21] Okay, let me find those files. Okay, I got it.

[05:15:25] No, I didn't get it, actually. Where is it? Downloads.

[05:15:29] Okay, for whatever reason, I'm not able to find them, so I'm gonna use the finder to find it.

[05:15:35] Okay, there you go, I found it right now. ContentDNA Framework. What I'm gonna do is, I'm gonna drag and upload it right here. In fact, for whatever reason.

[05:15:46] It is not even allowing me to drag and drop, so I'm gonna select this file, okay? Upload files...

[05:15:52] It's saying downloads.

[05:15:54] Search for the file.

[05:15:56] And here it comes.

[05:15:58] I'm uploading that.

[05:16:02] Give it a second for it to get uploaded, and there you go, it is uploaded right now. And then, I also want to upload the LinkedIn posts.

[05:16:08] Okay, there you go!

[05:16:11] Where is it?

[05:16:15] Okay, sample LinkedIn posts, upload that as well. So guys, what have I done? So, what I'm doing is, I'm not only writing a great prompt.

[05:16:24] But I'm also uploading the sample LinkedIn post and the Content DNA framework. This way, this tool has every possible thing to be able to replicate my style of writing. Are you able to understand what I just did?

[05:16:37] Now, this is not mandatory, let me make that very, very clear. This is not mandatory. But the reason why I did that is because if I do this, the quality of output would go up drastically.

[05:16:49] That is why I did it, and I wanted to teach you this as well. Now that we have done it, I can simply click on the Create button, save it to only me, and click on the save button.

[05:17:00] Right? There you go. I'm saving it.

[05:17:05] Let it get saved for a second, guys.

[05:17:13] And it looks like the GPT is ready. I can just copy this URL, open it on a new window, because I didn't really show you how your GPT is gonna look like, and here it comes. Post writer via style for LinkedIn. Let's give it a topic right now. Topic, let's say...

[05:17:27] Gpt... 5.5 is going to beat Anthropic.

[05:17:35] slash Claude to become

[05:17:39] the king of AI, okay? Let's say this is a topic that I want to write LinkedIn content on. Look at this, the moment I sent it.

[05:17:47] It has started to read something about it, and here comes the LinkedIn post, guys. OpenAI just booked Anthropic's Claude on notice. Here is why this could reshape the AI power battle. GPT-5.5 is rumored to be a massive leap.

[05:18:01] better reasoning, faster responses, deeper integrations across products. On surface, it looks like another model. But why does it matter? Because this is no longer about who has the smartest AI, it's about who controls the system. Here's the real game. GPT has distribution, data, ecosystem, brand, speed, platform. The bigger picture, guys, this is a very good LinkedIn post.

[05:18:23] This, I have to tell you, is a very, very good LinkedIn post. How much would you rate it? I'm very curious to know. From a scale of 1 to 10, how much would you rate this LinkedIn post?

[05:18:34] That just came out. I can tell you one thing, that it replicated my style of writing to the T.

[05:18:40] It just replicated my style of writing. It's probably an 8.5 out of 10. I'll tell you why it's 8.5 out of 10, because it said GPT-5.5 is rumored to be a massive leap.

[05:18:50] It forgot that it is already out there. So, what I can do is I can basically say, can you read up?

[05:18:58] the internet

[05:19:00] and then rewrite it so that information is accurate. Because this post was not accurate, actually. It said, GPT 5.5 is rumored, but it's already live.

[05:19:12] And here it comes.

[05:19:14] Now, it has updated it, now it doesn't say rumored anymore, because I just said, can you read up the internet and then write the info is accurate, so it updated the information, and here comes the whole LinkedIn post for us, guys.

[05:19:29] This is how you end up building advanced GPTs. Now, I told you one... I told you one thing. I told you I'll teach you how to build a GPT like this for free as well. How many of you guys want to know that? How did I build... how can I build this for free?

[05:19:45] Yes? Okay. I'm sure a lot of you people, for that.

[05:19:48] I need two things. You know what that is? Number one is the prompt. You see this prompt?

[05:19:54] This prompt is what I need, so I'm gonna copy this, and I'm gonna go to something called as gemini.google.com. Yes, Gemini, even on the free version, has something called as GEMS.

[05:20:07] This, my friends, is called as Gem Manager, which is similar to that of Custom GPT. So I can simply click on New Gem.

[05:20:14] And you remember the prompt that we created? I can simply paste it here.

[05:20:19] Now, this is why I didn't teach you Gemini Gems first, guys, because I knew that for you to be able to do Gemini Gems.

[05:20:27] You need to be able to write your own prompt. So first, I wanted to teach you how to write your own prompt, then I wanted to teach you Gemini Gems, right? Now that you learned how to write prompts, I can write the post writer...

[05:20:41] VS Style for LinkedIn.

[05:20:44] And the knowledge. I need to upload those files, so I'm gonna do that, uploading of files as well. Downloads...

[05:20:52] Here it comes... I uploaded both the files.

[05:20:57] It is uploading right now. It's the same thing! The prompt is what changes the game for you. On ChatGPT, you can use the GPT models. On Gemini, you can use the Gemini models. Now, let's see which one does a better job.

[05:21:12] I'm gonna give the... Same question to this as well.

[05:21:18] Topic... is this? Let's see which one comes up with a better prompt... better answer.

[05:21:23] There you go, I'm gonna turn on thinking, because it's free, so why not?

[05:21:33] Look at that, it has started to reason.

[05:21:35] It says predicting AI dominance, gonna read about a bunch of stuff, and here it comes. OpenAI is all set to kill Claude.

[05:21:43] I can tell you with the first line.

[05:21:46] This is my style. Here is why this is bigger than people think. ***** it is... it just killed it, okay? For the first time since AI was begun, OpenAI actually looked vulnerable, Anthropic's Claude didn't just compete, it started to win on everything. But the king is about to reclaim the throne. GPT 5.5 isn't just a minor update, it's a total reset of AI hierarchy.

[05:22:09] But why does that move matter? Most people think AI is about better chatbot. OpenAI knows better. They aren't building a smarter search engine. They're building the first world's first digital employee. Guys, I have a question for all of you people.

[05:22:23] Which one is better? Gemini Gem or ChatGPT? Let me know.

[05:22:29] Gemini Gem or ChatGPT?

[05:22:31] Yes, someone mentioned it has M dashes. That is true. It does have M dashes. So how do I update that? Let's say there is an em dash, and you want to make sure that your LinkedIn posts never have M dashes. Gemini Gem is clearly winning. It's crazy. Okay, I'm gonna turn off the chat. Very good question. Someone noticed an M dash here, and they're like, WebHub does an M dash.

[05:22:51] So, what do I do? Well, I can simply go to the edit button, Go to the prompt.

[05:22:57] Open the prompt.

[05:22:59] And then, you see there are node 1, Note 2, Note 3 here?

[05:23:04] I'm just gonna copy a node, Make it Note 4.

[05:23:10] And I'm gonna say... Never... Never.

[05:23:16] Use M dash.

[05:23:19] in my content.

[05:23:21] And you know what? If I think it is very, very important, I'll just put two stars as well. That's it. That is why we use notes.

[05:23:29] You don't have to go back to AI to update the prompt. I could just add it as a note, because that was never mentioned. And click on update, and you know what? AI will take care of it from here.

[05:23:41] Makes sense, guys? Drop in a heart if this makes sense. Drop in a heart if this was incredibly powerful. Drop in a heart if you think this session has made a difference so far in your life.

[05:23:55] So, what you learned over the course of, I don't know, last

[05:23:58] 90 minutes are things that I've mastered over the last couple of years. I've shown you those little, little nuggets and little, little examples that will help you to make this better, but I know for a fact

[05:24:11] That all of you guys are hoping that Webhuff, can you teach this one more time?

[05:24:15] Can you teach this one more time so that we are very sure on how to do this? How many of you guys want more? Drop a comment one more.

[05:24:23] If you guys want me to teach you this one more time.

[05:24:26] With a different example, of course, I don't want to show you the same example. Different example, so that you can bake this in.

[05:24:32] Yes?

[05:24:33] Let's do, very quickly, one more, okay? Now, the one more example that we're gonna do is very, very helpful. I have been seeing that a lot of you guys have been asking a lot of questions.

[05:24:48] In the chat. And sadly, because we literally have tens of thousands of people attending our sessions, it is impossible for me to answer or clear everybody's doubts.

[05:24:59] So, I thought, what if I build an app right in front of you guys, which can answer every single question of yours?

[05:25:09] It's an AI Q&A bot.

[05:25:12] Where you can ask a question about the mastermind, and it should be able to answer the question.

[05:25:17] Should we do that? I love those celebration emojis that have come through. Let us do that right now. Now, I'll tell you the basic logic of this. One is that we need a killer prompt.

[05:25:29] Two is that you might have this question, saying, Webhav, how the **** does AI know what you covered in the session? Well, because of this.

[05:25:39] You see, we are going to be attaching... you remember the knowledge base where we attached the content DNA framework and example LinkedIn posts? In this case, we're gonna attach this, transcript. Everything that was taught to you, guys, funny, this was the old session, right?

[05:25:56] Yes, we're both.

[05:25:58] So, everything, I mean, obviously, this is a transcript from an old session, as an example. Everything that was taught to you guys.

[05:26:06] in the first session, and... is this only the first session, or the fourth one? It's only the first session. It's only the first session. But the last one.

[05:26:13] Correct.

[05:26:14] Okay, guys, so this is the first session of the last mastermind that we did, transcript of everything that was spoken. This is 114 pages of document right here. How did we get it? Well, if you just go to Google, or ChatGPT, or Perplexity and look for video-to-text converter.

[05:26:33] You will land on a website like Happyscribe, where you upload the Zoom recording, or any video for that matter. It can convert that into a transcript. That's what we did. We used a tool like this, and got the hold recordings transcript right here. What I'm gonna do is, I'm gonna attach this.

[05:26:49] to a Gemini gem, give a nice little prompt, so that it can act like a kick-ass mentor. That's what we're gonna do. Well, I'm gonna come here and get the prompt written. This time, let's use Gemini, right? And I'm gonna be like, you are an expert prompt engineer who has

[05:27:06] return literally thousands of prompts for Gemini Gems. I want you to build a Gemini Gem for me.

[05:27:12] Which basically will, you know, act as a outskilled AI mentor. You see, this is going to be a mentor app where our learners can come and ask questions about anything around what was covered in the AI Mastermind. Your job is to understand the question.

[05:27:31] Find the relevant answer from the transcript that we are attaching to you.

[05:27:37] Once you find the answer, explain that answer back to the learner like you're the best teacher in the world.

[05:27:45] That is the prompt that I want you to write.

[05:27:50] Here you go. I've given the explanation of what I want the prompt. Of course, I can say, I can ask it, did you understand? I didn't do it because, you know, I want to move fast right now. And I have the, you know, the pro mode on so that I can get a very good prompt, and here it comes, guys.

[05:28:08] Here it comes. The Outskill AI Mentor prompt is right here. There's one thing that I forgot to add. I have to add this here. Hey, one more thing that I forgot to add about this app is that if someone asks you a question which was not covered in the session.

[05:28:25] and you are not able to find that information in the transcript, I want you to say that that was probably not covered in the session, and you can probably reach out to the outskills support or one of the mentors to get the answer.

[05:28:37] And don't make up answers yourself. Make sure you include this in the prompt.

[05:28:41] There you go, I've made some update because I suddenly remembered of this.

[05:28:57] There you go, here comes the whole prompt, guys.

[05:29:00] Now, the prompt is here, but you can clearly see the prompt is not in the markdown formatting that we want. And I told you what we need to do here. Well, very simple.

[05:29:10] what we're gonna do is copy this prompt structure, come back, and I'm gonna be like.

[05:29:15] Can you please rewrite the whole prompt in the Markdown formatting structure that is shared above, and give me the output in a code editor or a code block, so that the markdown formatting is retained?

[05:29:30] There you go. I've dropped the framework, I've put a message saying, please rewrite the prompt in Markdown formatting, and give me the output in a code editor or a code block.

[05:29:42] You remember, guys? Give me a thumbs up if you remember why we said coordinator or code block.

[05:29:46] Give me a thumbs up, so that we can get the output in this box. So that we can get this output in this box. We got the prompt, I can simply copy this.

[05:29:58] go to Gemini Gems, Click on New Gem, Paste the prompt.

[05:30:06] Upload the knowledge base of the transcript. Let me first download the transcript.

[05:30:14] **** cold.

[05:30:16] Okay... I'll upload the transcript, there you go.

[05:30:24] I'm gonna call this the Outskill AI Mentor. Funny, do you have any tough question to ask?

[05:30:31] Yes, I think one of the things that was confusing for a lot of people was the five-step process of how text models work. We taught them a five-step process of how the models perceive prompts. Maybe we could do a recap of that.

[05:30:46] The mentor taught us on how, you know, models work, and I could not understand it because it was too technical for me. Could you quickly explain it to me on how they actually work? There were some 5 steps to it.

[05:30:59] Okay, let's see.

[05:31:11] Alright guys, that's a fantastic question.

[05:31:15] At first, the way Raghuvir explained it in sessions makes it very simple to visualize. Think of an LLM as a super smart robo-friend who read every book and conversation ever written. Step 1, tokenization. Step 2, embedding. Step 3, transformers, 4, prediction. 5, response, generation.

[05:31:34] You're doing great. Moving from zero to understanding foundational steps is a huge leap in your journey to becoming an AI generalist. How beautiful is that? Guys, if you think that's a good answer, drop in a heart. Funny, tougher question, man, tougher ones.

[05:31:48] Okay, let's make this very vague. We taught them a tool that helps them network with friends of friends. When they are applying to jobs, etc, they can basically reach out to a lot of people. It's a very vague question, but let's see... I have no idea. I have no idea what this tool is.

[05:32:04] Okay, so there was a tool that was taught, you know, which was there to find friends of friends and network with them and connect with them using AI. I can't remember that tool because I was busy watching cricket, so could you remind me of that tool?

[05:32:22] What tool are you talking about?

[05:32:25] I can't talk about... is this a new tone?

[05:32:28] No, this is, happenstance.

[05:32:31] Oh! I got it. Oh, yeah, of course, of course, the two... dude, I am very impressed.

[05:32:39] I'm very impressed, actually.

[05:32:42] Happenstance! Yes, there you go, guys. Friends of friends is called as happenstance. This is everything that it can do. Guys, don't you think this is wild?

[05:32:52] That is actually able to pick up this.

[05:32:57] Insane. Drop in a heart, guys, or a wow emoji if you think I am actually blown that it's managed to pull this off as well. So, but there you go, guys, we have a nice little app that is built out, which can literally answer questions based on the session that you've attended, and you know what? We're gonna make this available for all of you people.

[05:33:16] We're gonna make this available for all of you people, so that you can use this.

[05:33:22] Okay? And you know what? In reality, to be very frank, this is not what we are making it available for you guys. We have built an app called as Outskill AI.

[05:33:31] This is the app that will be available for you. Here, you can ask whatever question you want to about the session that you have attended, and it will be able to answer

[05:33:41] All without breaking a sweat. And here it comes. Alright? All without breaking a sweat, it will be able to answer. This is the app that you guys will get access to, which is called as the AI Mentor, and you'll have it for as long as you want it to be. But I have a question.

[05:33:59] Do you guys want to learn how I actually built this app? I built this app in, like, 10 minutes, by the way, without writing a single line of code.

[05:34:10] Yes, drop a boom in the chat.

[05:34:12] And what if I tell you the whole app is built for free, And also.

[05:34:19] The prompt that is used inside of the app was something that I wrote last week.

[05:34:24] During a session like this.

[05:34:26] Yes? Okay. Let me do that. This is gonna be very quick, but let me do this. Guys.

[05:34:32] So, here's the thing.

[05:34:34] The thing is... If I want to build a beautiful UI like this, I can't directly use Gemini Gems.

[05:34:43] So, for you to be able to build an app like this.

[05:34:47] You need two tools. One, an AI agent builder for it to build the backend of the tool, and a front-end builder. The backend builder that we're gonna use for this is called as Lizer.ai.

[05:35:01] Liza.ai is an incredibly powerful platform with which you can build AI agents without writing a single line of code. So, I can go to Agent Studio. After logging in, I hope I've logged in.

[05:35:14] Okay, there you go, I've logged in, and I can simply click on Agent button right here.

[05:35:19] And once I do, right, it's gonna ask me a bunch of questions. I'm gonna say outskill AI Mentor, what is the description? It's asking me which AI model do I want to use. Let's say I want to use the 3.1 Flash, which is a very fast model. Now it's asking me for the prompt. You can see it's asking me for the prompt, but it's asking me to put it in three different buckets. Role, goal, and instructions. So we already have the prompt.

[05:35:42] So I'm gonna go here, click on the edit button, because we already have the prompt, I don't need to write the prompt again.

[05:35:47] Right?

[05:35:49] the role is here, so I'm gonna copy this.

[05:35:52] Paste the role, then there is goal. The goal is basically the objective, so I'm gonna copy the objective and paste it right here, and then comes instructions. For the rest of the prompt, which is the context and instructions, I can just copy this.

[05:36:06] and paste it right here. There you go, the prompt is ready. Now, the next thing is Knowledge Base, because I have to upload this transcript. So, it has something called as Knowledge Base right here. I can toggle this add button.

[05:36:19] And I can create a new knowledge base. To save time, I'm gonna use one that was uploaded, I don't know, a year back. I'm gonna just select that one for now. Or you can add an actual knowledge base right here, and click on the save button. And that's it, guys. I click on Create, just like we created a Gemini Gem.

[05:36:37] We have created this as well. What is prompting? Let's see if we are able to get an answer.

[05:36:43] And here it comes. The prompting works, everything is working at this point of time, okay? It's all working, it's all doing great. Now, we have to give this, like I told you, this is the backend of the app.

[05:36:56] This is how we built a Gemini Gem. Now, we have to give a beautiful UI like this. For you to build a beautiful UI like this, you can go to Google AI Studio.

[05:37:07] Right? Something like Google AI Studio, which is completely free, by the way.

[05:37:11] Once I go to Google AI Studio, I can simply write a prompt like this.

[05:37:17] I want to build an incredible app, which is called... going to be called as the Outskill AI Mentor. What this app will do is going to be like a chatbot app, where my learners can ask questions, and it should be able to answer those questions.

[05:37:34] What I want you to do in this is that, you know, the UI could be similar to that of ChatGPT and Cloud, but the branding of the app should be closer to my company, which is Outskilled.com. That is the UI I want you to be able to build. People should be able to click on New Chat, start a chat, have a chat with the AI, and get their questions all solved.

[05:37:53] To power the backend of the tool, I want it to be integrated with the Lizer AI agent.

[05:37:59] The Lizer AI Agent code is something that I will share with you. Use that to build the backend so that the app works the way it should.

[05:38:08] There you go, guys. I have entered the prompt, and now, the Lizer AI Agent, the one that we built, how do I integrate the code? Two buttons. You see this agent API right here? I tap on this button.

[05:38:21] Then I come to Inference, the second option. All I have to do is copy, that's it. I click on Agent API, I click on Inference, I copy this code.

[05:38:30] And then, I come to Agent Studio, and I basically say, Here is...

[05:38:39] the backend code. And I just paste the code, and click on Build. That's it, guys. That is it. It will take about 10 minutes. It will... the Google AI Studio will build a beautiful UI,

[05:38:54] integrate the backend with the Lizer AI agent.

[05:38:58] to be able to build a full-fledged app like this, hopefully much more beautiful, right now, right in front of you guys. You have to give it about 10 minutes for it to bake that in. So let's give it that 10 minutes, and after the 10 minutes, it should be built out, and I will be able to tell you what it can do. It can... you can also see, it's giving me some style, design styles. I want it dark and elegant, or what is this? Let's say I want

[05:39:23] want, like this, frosted glass, I can literally select that design as well. It gave me some options.

[05:39:28] But anyways, it has started to build right now. Give it 10 minutes, as in 10 minutes, you will see the whole app being baked in. Now, what we're gonna do is, because we have 10 minutes, funny.

[05:39:41] Why don't you show something that you wanted to teach? So Funny, guys, has been playing with some tool, and he found it to be very, very interesting, and he was like, Weber, we should teach that, right? So I'm gonna give him 10 minutes, okay? I will let Funny take over.

[05:39:56] I will let Funny teach you that very incredible tool. As I take a quick 5-minute break between, you don't get a break, right? I take a quick 5-minute break, and once you come back, I'm gonna show you how this app is gonna look like, and not just that.

[05:40:12] I'm gonna show you how to convert the whole thing into a voice agent, an AI mentor, which will be turned into a voice agent, so you can talk to it, and you can... it can talk back to you. And finally.

[05:40:26] The last 90 minutes is going to be mind-blowing, because I'm going to show you how I use AI on a every single day. The workflows that I use, the tools that I use, the agents that I've built, the products that I've built, so that you get a glimpse

[05:40:42] of what it feels like to work in the age of AI. How many of you guys are excited about that? Drop in a heart.

[05:40:50] If you want to see how the tools that I use, the workflows that I use, the way I operate as an AI orchestrator is what I'm gonna show you. Incredible. With that being said, Fani, over to you. You literally have 10 minutes, okay?

[05:41:04] I'm gonna take that 10-minute break, I'm gonna let AI to ship this product for us, and I'm sure this 10-minute's gonna blow everybody's mind. So, over to you, my friend.

[05:41:13] Absolutely. Alright, folks, so what I wanted to use this time for is... remember when Raghavir was ending the session, he mentioned that he used a design tool that absolutely blew his mind? That is the design tool that I wanted to go ahead and show to all of you, and I have a use case that I'll go ahead and show as well. But this design tool

[05:41:34] is inside of another tool that we have all been using until now, which is Claude. So, to be able to access this design tool, you need to be on the paid version of Claude.ai, but as you are on the paid version of Claude.ai, in the left side menu, you will be able to find an option called Design. Now, as you click on Design, you enter this new ecosystem called Claude Design.

[05:41:58] It's currently in research preview, they're gonna launch it very soon for everybody else to go ahead and use, but Cloud Design is absolutely a game changer when it comes to whether you want to go ahead and build websites, whether you want to go ahead and build presentations or slide decks.

[05:42:14] whether you want to go ahead and build videos or generate videos, all of that can be done using Cloud Design. So, over the next 8 minutes that I have, I'll quickly give you a tutorial of how you can use Cloud Design as well, right? Now, once you click on the design option, you enter this particular environment, and the first thing that you should be doing inside of Cloud Design is

[05:42:38] go into this option called Design Systems, because here is where you are going to go ahead and create a new design system, which is based on the design language of your own brand. So whenever you have used... I'm sure everybody here used AI tools to go ahead and try to create a website, probably, or create presentations, but you might have realized

[05:42:59] that your brand's design doesn't come through very well on the presentation, and Cloud Design changes that exactly. Because here, you can set up your entire design system by giving it some of your files, which you can go ahead and import from GitHub, or you can link it directly from your computer, or in case

[05:43:19] your designer has created the design files on Figma, you can simply go ahead and upload the entire design... I mean, upload the entire Figma file here, and it will then read through everything, understand the design guidelines, and create the design system for you. I'm going to quickly show you one of the design systems that I have created, which is the outskilled design system itself, right? You have been seeing us using the

[05:43:43] skill slides all throughout. So you get a sense of how this design looks like.

[05:43:49] I've simply gone ahead, put up the Figma file of our outskilled design.

[05:43:54] and it was able to go ahead and capture every element from it, right? And once the design system gets created, you will be able to go ahead and vet it and approve it as well. You can either say looks good, or you can say needs work, and it basically pulls out every micro element from the entire, you know, design file that you have gone ahead and uploaded, right? Here you can see it has pulled out the font, it is pulling

[05:44:19] out.

[05:44:20] the different buttons that it should have, it is pulling out the brand colors, where should the dark surfaces, or what should the dark surfaces look like, what should the colors on foreground text look like, and everything else. Extremely detailed. And now that you have this design system created for your brand.

[05:44:38] You can simply come back into the main menu.

[05:44:41] Let us say you're creating a presentation, which is the example that I'm going to go ahead and take. You can go into the slide deck option here, name your project whatever it is that you may want to call it. I'm going to go ahead and name this Outskill Expansion

[05:44:58] to LATAM regions. Let's do a deck on that, because that is something that I was working on.

[05:45:03] So... and once I... once you enter the name of the presentation that you're creating, you can now select your design system. So here, Outscale Design System is the one that I showed you. I'm going to go ahead and select that, and then you click on Create.

[05:45:18] Once you click on create, this kind of environment will open up, where you can go ahead and, on the left side, instruct your... instruct plot design as to what should it create using the design system that you have created, right? So it is inside that design system currently, and it is saying, describe what you want to create. Now, here is where I can go ahead and put my content for the slides.

[05:45:43] Now, how do I get the content?

[05:45:45] I told you that I am researching on how Outskill can expand in the LATAM regions, like Mexico, Peru, and all of that, right? So I went ahead, gave a prompt to ChatGPT. I asked ChatGPT to take the role of an expert management consultant, and do a research of how EdTech market work... ed tech market is looking like in the LATAM countries.

[05:46:08] And it took about 14 minutes already, gave me this entire executive summary of what's happening, what are the countries that we need to look at, or the cities that we need to look at, and everything around it, what are going to be the challenges, what are the opportunities that we have, and everything else. I...

[05:46:25] worked on this research that it gave, because, like we learned in the first session, you don't just use the deep research of one particular model, you use deep research of multiple different models. So I went ahead.

[05:46:38] gave it...

[05:46:39] a lot of context of my own. You can see I pasted a text, and then I asked it to generate a final report for me. And once it did all of that.

[05:46:50] I finally asked it to give me the content for every slide. So it gave me this entire content, and it went ahead and created around 18 different slides. All that I need to do right now is to copy all of this content.

[05:47:06] Come back into the...

[05:47:09] space that we already have in the cloud, design, and then just paste this entire content. Once I have pasted it, I can simply go ahead and say.

[05:47:18] I've gone ahead and pasted the content that I need to have on my slides. Please go ahead, review this entire content, which is on how Outskill can expand to LATAM regions, and build out an entire presentation for me that I can go ahead and show to my founder using the Outskill design system.

[05:47:36] You can give it a prompt in simple English and click on send.

[05:47:41] Now, what it will do is, it'll start using the design system that we have created to go ahead and build out the entire presentation. Now, this entire process

[05:47:51] takes about 5 to 10 minutes, so I've already gone ahead and created an entire presentation that I'm going to show to you, just so that we could save time. But what everybody also needs to understand is that when you're creating a design system, that is when Claude

[05:48:07] consumes more tokens, but when you're using the design system, the token consumption is low, right? So, once it builds out, you're going to go ahead and get an output like this.

[05:48:20] You've been seeing the outscale design so far. The exact design is what it was able to replicate in this entire deck that it went ahead and created. It's an 18...

[05:48:30] page, or 18 slides presentation. It says, stepping into LATAM, and actually drop in a heart. Let me check if that option is open for all of you, but drop in a heart if you like what you're seeing on the screen. Give me a second, I will...

[05:48:47] Alright, I'll ask you all... in fact, let me know on the chat what you feel about this that you're seeing on the screen as I take you through the slides, right? Stepping into LATAM, LATAM is a high-growth, underserved AI education market. What is

[05:49:03] The timing is strongly favorable at this point of time. Digital acceleration is happening. A large and fast-growing ed tech market is what we are seeing. Based on all the

[05:49:15] data that it found in the research, it was able to go ahead and make this entire graph as well, which you can go ahead and use. The AI skills gap is the core opportunity. Look at how consistent the design is on every slide that we are looking at, right? And it also pulled out how LATAM learns. Mobile first.

[05:49:36] Practical learning is what they prefer, they're price sensitive, they like short modules, and they're all about certifications. It's crowded, but nothing is available at this point of time that is very deep, which is why Outskill can go ahead and win.

[05:49:52] It is paid right now, for those of you who are mentioning on the chat, but this could very well be available for a lot of people for free or for limited credit usage as well. But this

[05:50:03] Just look at the design, right? This completely takes away the role of a designer as well. This is available inside of Claude itself.

[05:50:13] Omi, if you're asking what I'm using currently, you can see it on the URL. It is inside of Cloud, it's called Claude Design. And just look at what it has gone ahead and created. The GTM plan also is right here for us.

[05:50:27] I can simply go ahead and share this with Webhov, who's the founder, for him to go ahead and review. And if I don't like something here, I can simply click on Edit.

[05:50:37] And I can change the colors as well right here. If I don't like the font, I can change the font and everything else. And once I'm fine or happy with the result, I can go ahead and simply click on Share, and download this as a PPT, and upload it to Google Slides, and continue to edit there, or upload it, I mean, use it as a PPT presentation itself.

[05:51:01] Right? Notebook LM also does not get the design this accurately, and you can today use Cloud Design to create websites. Now, if I go back to my homepage and select Prototype, and use the same design system of Outskill, it will create a new, you know, website in the Outskill design for me. That is how powerful Cloud Design today is.

[05:51:27] I think for presentations and for design, Claude is much better than Gemini as well.

[05:51:34] I hope all of you got a sense of how you can use Cloud Design. It is inside of Cloud, you simply go to Claude.

[05:51:42] And if you're on the paid version, you will be able to see the design. You click on design, and you enter this entire ecosystem.

[05:51:49] Okay, I see Webhav is back.

[05:51:52] But yeah, webhook, that is the cloud design.

[05:51:55] That's weird, yeah.

[05:51:57] Yeah, this claw design is just insane. Guys, drop in a heart for fun.

[05:52:02] Drop in a heart for Funny for covering that, incredible information for all of you people. Thanks, Fani, thanks for picking this off for me. I know a lot of people are mentioning that free version is not available, but you will get a better perspective on free versus paid tools as we move forward as well, everyone. I'll clarify that towards the end.

[05:52:22] Awesome, awesome. All right, guys, as funny was teaching you guys, the, you know, everything around cloud design, what our Google AI Studio cooked is this. We just gave the prompt.

[05:52:35] It did a bunch of work, you guys can see, right? It did everything autonomously, and here we are, right? And I can simply ask a question, what is prompting?

[05:52:44] And you know what?

[05:52:45] we will basically get the answer. There you go. Here it comes. Beautiful Glassmorphism design, designed, powered by Lazar AI, designed by Outskilled.com, because maybe I used Outskill in the word, but you get the idea. The whole app

[05:53:01] is single-shotted. Like, we just set that, built an app like this, and here comes the whole app. I can also say, right, like, hey, the design is actually in blue color, outskilled brand colors are neon green, dark green, and black, and stuff like that, so can you make sure you fix that?

[05:53:19] And I could just drop in a prompt like this, and that's it. And now it's working on something, you can see. Once it is done, I can click on the send.

[05:53:27] And it will be able to do that as well.

[05:53:31] Okay? Awesome. So let it do its work. I told you, I'm gonna show you one more thing also in this process, and that is what I want to show you very quickly right now.

[05:53:41] Do you guys want to know how to build a voice agent out of this? Drop a **** yeah in the chat. A voice agent out of this.

[05:53:51] And of course, guys, you can publish it by clicking on this button, Publish, right? A voice agent is where you can talk to AI, and it can talk back to us.

[05:54:00] Yes, let us do that right now. For you to build a voice agent, what you'll have to do is go to this platform called as WAPI, okay? Once you go to WAPI, I can simply log in.

[05:54:15] And look at that. This is what WAPI looks like. I can simply go to Assistance, which is right here, and I click on Create Assistant. And let me call this the Outskill AI Mentor. Very simple, click on Create Assistant.

[05:54:29] for whatever reason, it says fail to fetch. I will say 2.0. Let's see if it is able to create.

[05:54:36] Let me do a quick hard refresh.

[05:54:41] For whatever reason, it is saying failed to create, that's okay, we're gonna try it again.

[05:54:46] And see if it's gonna work.

[05:55:03] It's loading, guys, you guys can see it's loading? Okay. I come to Assistance again, Create Assistant. I'm gonna call this the AI...

[05:55:11] mentor by Outskill, let's say. Click on Create Assistant, hope it's gonna work, and here it comes. It does work. Now, right now, I can select which AI model I want. Let's say I keep it to OpenAI, let's say I want 5.4 Mini, which is a very fast model, and then it needs a prompt.

[05:55:28] Again, it's the same thing, and I have the prompt ready, so I just copy this.

[05:55:33] paste it right inside, the prompt is good to go. Then it asks me for a knowledge base, like you can imagine, and click on add a new file, but for this example, I'm gonna just stick to an old transcript that I have, and that's it, guys. Because this is a voice agent.

[05:55:47] I can select a voice as well, so you can see there's a voice option. I select the voice, and it has a bunch of free options that you can select from.

[05:55:55] Right? But since I'm a slightly advanced user, I'm gonna select Manual Voice ID, and I added a custom voice ID right inside of it. But you can use one of the voice IDs that are already there. Simply click on Publish.

[05:56:07] That's all I need to do. That's all I need to do, and it says assistant is published. Let me quickly see if I'm sharing the audio with you guys or not, so that you can hear me.

[05:56:18] Here we come inside, I'll click on the talk button.

[05:56:22] And look at this, it's connecting.

[05:56:27] Hello?

[05:56:29] Hey, how's it going?

[05:56:32] Hey, I'm doing well. Thanks for asking. How can I help you today?

[05:56:36] Well, I was wondering if you could clear a few doubts of mine, because I attended the program by Opskill.

[05:56:46] Absolutely. Happy to help. Please send me your specific doubts or questions from the Oxford program, and I'll do my best to answer them based on the session transcripts.

[05:56:55] Awesome, so could you tell me what prompting actually means, and is prompting even important? Like, why do I have to follow such fancy rules to write prompts?

[05:57:14] Few people are like, it sounds like me.

[05:57:16] Okay? What happened? You got stuck. Sorry, a few more seconds.

[05:57:22] Go on, go on, sorry I interrupted.

[05:57:26] Great question. Here's the simple version. Prompting means the way you give input to AI. In the session, they said, for AI, we are the ones who give that input, or we are the ones who engineer how that input is given.

[05:57:38] So, prompt engineering is basically learning how to ask AI in a better way, so you can get the kind of response you want. Why is it important? Because, as the session explained, prompting is one of the key skills that you need to be...

[05:57:52] Yes, guys, for all the people wondering, that is my voice.

[05:57:57] I got AI to clone my voice so that it can sound exactly like me.

[05:58:05] That is what we did here, and that is what you heard. So what we did is we pulled up a voice.

[05:58:10] And we basically trained it with a bunch of my audio to make it sound exactly like me. And that is why you were able to hear the voice to be sounding exactly like me. And parallely, if you remember, I said, can you make it in outskilled brand colors? And look at that. It worked for some time and brought it all into green and everything around it for it to be in the outskilled brand colors as well.

[05:58:35] Paralleling, as we were doing both the stuff.

[05:58:38] So folks, this is what I wanted to show you, so that you guys get a very good sense of what is possible with AI. Now, with that being said.

[05:58:47] I wanted to take it to the next level.

[05:58:49] You see, we all want you guys to succeed in the AI-first world. And for you guys to succeed in the AI-first world, I don't want you guys to stay where you are at this point of time. Of course, the mastermind is helping you to push

[05:59:03] your levels to a very different level, but I don't want you guys to stop here. As a result, we have decided to give you a roadmap, which is completely free of cost, that will be available to you for download after the two-day mastermind is over. That roadmap will give you next steps, so that after the two-day mastermind is over, you should know what you should do next, what you should learn next.

[05:59:26] How can you go deeper into the subject? How can you not be the top 5%, but actually get to the top 1%?

[05:59:33] Right? And we want all you guys to win. As a result, we built this super extensive roadmap, where you can follow the roadmap.

[05:59:41] Learn stuff all by yourself, read up stuff from articles on the internet and everything, and win in the AI-first world. You should be making that roadmap your AI Bible for the next 18 months. But you know what? When we started to give this roadmap to people, one problem that we faced was a lot of people would take the roadmap, start it, and never actually finish it.

[06:00:03] What do I mean by that? You see, Never actually finish the work.

[06:00:09] Because, you know, they don't really know where the goalpost is. So, we wanted to fix it. You know, I thought, if I can show you what each and every one of you would be capable of, if you follow the roadmap for the next 18 months and learn, you will have a goalpost to chase and win.

[06:00:28] And learn. And that is exactly what I'm gonna do right now. So, I want you guys to be super focused and listen to me right now. For the next 90 minutes, okay, next 80 minutes to 90 minutes, I will show you how I use AI on an every single day level.

[06:00:46] The kind of tools that I use, the kind of workflows that I use, the kind of automations that I use, the kind of agents that I use, and everything around it.

[06:00:55] So that you know and you get to understand what is AI capable of today. The thing that fears me the most is that most of the people think AI is ChatGPT.

[06:01:08] Most people don't realize the power of AI as of today, and I don't want you people to be like that. So I'm gonna show you everything that I use.

[06:01:18] And on top of that, I'm gonna give you a roadmap end of 2 days, so that you can follow the roadmap and achieve everything that you are going to see from my end.

[06:01:30] Drop in a heart if that makes sense. But it comes with a caveat. And the caveat is.

[06:01:36] I will not be able to teach you everything. I'm gonna show you everything. For you to learn all these things, you have to follow the roadmap, and the roadmap will be given to you for free anyways. If I... if I want to teach you everything step by step, it's gonna easily take me 300 to 200 to 300 hours, which I don't have, neither do you.

[06:01:55] So, use this as a show

[06:01:57] Sit back, relax, watch what AI is capable of. Once that has happened, you have the roadmap, you can learn everything yourself.

[06:02:08] Alright, with that being said, sounds like a deal? Drop a comment, deal, in the chat, if that sounds like a deal. Deal in the chat, guys, that you will listen, you will take notes, you will get a sense of what is possible, follow using the roadmap, and then learn things.

[06:02:23] As I show you a lot of things, you guys will definitely get bamboozled. You'll be like, what the **** is even happening?

[06:02:31] So...

[06:02:33] Don't worry about it. See what's happening, follow the roadmap after the two days is over. Alright, with that being said, let's get right into this magic. Let me quickly share my screen.

[06:02:52] And in this journey, right, I'm also going to show you

[06:02:56] what it takes to become a true AI generalist.

[06:02:59] What are the kind of things that you should be able to achieve as a true AI journalist, so that you basically increase your odds of winning by a significant level? So folks, the level one, there are five levels to becoming an AI journalist, right? The level one is basically mastering advanced prompting techniques.

[06:03:17] You see, today you learned magic prompt formula, maybe some level of context engineering, and then you learned the markdown prompting. But these are not enough, these are just the beginning.

[06:03:26] So there are a lot more prompting techniques that we have covered in the roadmap. Make sure you go and learn all of them. But there is one big gap that I see in most of the people. Most of the people think AI is like, you know, ChatGPT, Gemini, and plot. It is not. You guys came across this thing called as Open Router today.

[06:03:43] Right? Open Router, at this point of time, has a ton of AI models. If I just select text, you can see there are 367 AI models at this point of time, line for just text on Open Router. And if I go to Rankings.

[06:04:00] you will see which AI models are performing best. If I go to Trending, right, you can literally see there's an AI model called as Lagoon, Laguna M1, Owl Alpha, Code Strill, GBD 5.5, Deepstick V4,

[06:04:14] all mini LM.

[06:04:16] CocoRo 22 Million. These are the AI models that are trending at this point of time. While the names might sound funny to you guys, but these are the models that are cutting edge at this point of time. These are the models that people are using at this point of time. These are the models that you need to figure out a way to use it. How many of you guys want to use models like this, so that you're always ahead?

[06:04:38] Well, I do that. You know how I do that? I have connected Open Router to this platform called as Bolt AI.

[06:04:47] Bolt AI is this incredible platform where I've connected Open Router 2. As a result, all of a sudden, I literally have access to all the 300-odd AI models that are live on my Open Router account right now.

[06:05:02] Drop in a heart if you think this is just white. Let's say I want to use, I don't know, DeepSeek.

[06:05:08] Right? I can literally look for a deep-seq inside of this list.

[06:05:13] There you go, you can see DeepSeek R1V4, which is literally on the top. I can literally select that AI model, ask a question, and I can get answer from the top 10 AI models at this point of time. While all your friends, everyone else around thinks AI is ChatGPT, you all of a sudden have the ability to use an AI which is right now, the cutting edge.

[06:05:35] That is, right now, trending all over. But you don't stop there.

[06:05:40] That's the whole point. You don't stop here. You see, when it comes to AI, right, a lot of people think you give an answer, you get an answer back. You don't really have settings. In fact.

[06:05:51] every single AI model, including a model like ChatGPT, is GPT, right? Let's say I go to GPT, OpenAI, where's OpenAI?

[06:05:59] Let's say I go to GPT 5.5,

[06:06:02] Here you go, I've selected GPT 5.5. I ask a question, I get an answer, right? Instead of ChatGPT, I can use Bolt AI as well to get the answer. But here's the thing that most people aren't telling you.

[06:06:13] ChatGPT is an app that is built for people who are beginners.

[06:06:19] You guys are not beginners. You guys are winners, and for you guys.

[06:06:25] You need to know that every chat GPT model, or every AI model in the world for that matter, has a bunch of advanced settings. Look at this. There is something called as temperature, max tokens, presence penalty.

[06:06:38] Frequency penalty, top p-value, top K value, reasoning effect, and all that good stuff. You know what these are?

[06:06:46] These are those advanced settings that are hidden from most of the people.

[06:06:51] These are settings that people are not even aware exist, because ChatGPT doesn't expose these settings. And every single AI model in the world have these settings.

[06:07:02] As you change settings of these, the kind of outputs that you get fundamentally changes. This, my friends, is called as the playground.

[06:07:11] And people are... have no idea about it. It's like you're driving... you have a Ferrari, but you're sitting on the backseat. If you have a Ferrari, you should be ***** driving it. And for you to drive the Ferrari, you need to know the settings of it.

[06:07:24] Now, I don't really have the time to teach you every single piece of it, like temperature, max tokens, presence penalty, frequency penalty, and all of this. All these are covered in the roadmap.

[06:07:35] for you to be able to pick up change values of this to get the kind of outputs that you want to. And just in case, if you're wondering, this is only for a GPT model, that is not true.

[06:07:45] You can literally select

[06:07:47] Any model out there in the world, and you will have all these advanced settings for them as well.

[06:07:54] That is the art that you need to pick up, my friends. These are the kind of things that you have to pick up. But when we talk about AI, right, there is one thing that a lot, a lot of people talk about, and you know what that is? Privacy. Because when it comes to AI,

[06:08:09] We'll literally share everything that there is. Do you guys agree? Give me a thumbs up. We'll literally share everything in our life to AI.

[06:08:17] A lot of deepest secrets, a lot of inhibitions, a lot of things that we will never share it to a human, we share that with AI.

[06:08:26] And you know what?

[06:08:28] It is scary, because what if that information gets leaked? What if somebody hacks into a chat GPT server? It has happened before. Well, every time there is something private, every time there is something important that I don't want the world to know about.

[06:08:45] I do something else.

[06:08:47] I use an AI model and run it on my own computer.

[06:08:52] When you're able to run an AI model on your own computer.

[06:08:57] It can work without internet, it can work for free for life, and the moment you shut out the model, everything gets deleted.

[06:09:05] So, it's 100% private.

[06:09:09] And to make that happen, what do I do? Well, I use a tool like Olama.

[06:09:15] Olama is a platform which is like a software that I can install on my computer, and once I install Olama on my computer, I can literally run AI models on my computer. For example, if I go open Terminal.

[06:09:31] Right? If I open Terminal, if I just type Olama and chat with a model, right now, you will start seeing, okay, let's say, what came first.

[06:09:42] chicken or egg. Obviously, this is not a very private question. I'm giving you an example. You see the answer that I'm getting out of this right now? This is all coming from an AI that is running literally on my computer right now. I don't need internet access.

[06:09:56] I don't need any access for that matter, it doesn't need to be on cloud, it just works.

[06:10:03] It just works, guys.

[06:10:06] And you know what? The thing that makes it even crazier is the fact that you might be wondering that there is no way in **** I would be using Olama on this. It's super boring, it's ugly. There is no way I'm going to be using it like this.

[06:10:20] No, I don't use it on Terminal. What I do is, I've basically connected Olama to an app called as Atomic Chat.

[06:10:28] And Atomic Chat has access to the AI models that are running on my computer. So I, all of a sudden, have a beautiful UI, and I can say, what came first.

[06:10:39] chicken or egg, and you know what? Atomic Chat will... is powered by something called as the Google Turbo Engine. As a result, it can use much more powerful models, and you can see this. It has started to think, it has a beautiful UI right now, right? And the answer that you see at this point of time that is coming.

[06:10:58] is coming from an AI model that is running on my computer. So I have the functionality and the usage of a beautiful chat GPT, but also the power of an AI model that is literally running on my computer right now.

[06:11:17] Guys, isn't this insane? Drop a comment insane in the chat. If this is insane, drop a comment insane in the chat.

[06:11:25] This is the true power of an AI generalist. An AI generalist doesn't think about using a model that everybody uses. An AI generalist is thinking about, how do I get the most out of AI?

[06:11:39] So, he prompts the best

[06:11:41] he does, or he or she does, context engineers the best. They always use the best freaking AI models out there. They push the limits of an AI model by playing with the parameters of an AI model. They literally use AI models running on the computer to make sure privacy is cut down to the best.

[06:12:00] Right?

[06:12:01] That, my friends, is the power of AI. That, my friends, is the power of being an AI generalist.

[06:12:10] Yes, and folks, here's the thing.

[06:12:13] You will be able to learn everything that is on this slide at this point of time.

[06:12:19] By following the roadmap.

[06:12:20] The roadmap has everything that I've just spoken about, and a lot more, in a lot more detail, so that you can learn it all by yourself. And if you follow the roadmap, you can achieve everything that I just spoke about.

[06:12:32] in less than 3 to 4 months. If you can dedicate 10 hours a week, in less than 3 to 4 months, you can achieve all of this and do a lot more as well. Now, a lot of people will be like, Webhav, I don't have 3 to 4 months. I'm very busy in my life. Then, boss.

[06:12:48] I can't help you.

[06:12:49] Because nobody can learn for you.

[06:12:52] Nobody can come and learn for you. You have to learn yourself.

[06:12:57] And let me tell you one thing, guys, I thought this is important, so I'll address this. All the people who are like, my life is too busy, I have work, I can't do this, I don't have the time, and give reasons like this, let me tell you this one thing. Tomorrow, don't complain when **** hits the face.

[06:13:15] Because it is going to happen. When things change us, people expect... expectation changes. The world expects everyone to be an AI orchestrator today. This is the future of jobs. Most of your friends have not realized. You are on this call realizing this. If you are pushing yourself back, saying, I have the roadmap.

[06:13:33] I have everything that I need to learn. I have an unfair advantage because my friends don't even know something like this exists, yet I don't take... I don't spend those 18 months that I need to learn this thing, and complain saying that, sorry, I can't do much about it because I don't have the time. Nobody can help you.

[06:13:51] nobody can help you. Guys, because of AI, we are all part of a very interesting reset.

[06:13:59] And I want to explain to you what this reset is. You see, it doesn't matter what has happened in your life so far.

[06:14:05] Before I move on, I wanted to address this, okay? It doesn't happen, did you do well in your life? Did you not do well in your life? Did you get into that IIT that you wanted? Did you get into that BEAT school that you wanted? Did you get that job that you wanted, or anything like that? It doesn't matter. If any of you have this regret, saying, hey, I wish I could do this in the past because of which, if I would have done that, I would have been in a very different position today. If you have those feelings as of today.

[06:14:30] Let me tell you this very clearly. The world is coming to a reset. No matter who the person is, everybody is going to stand in the same line right now and run the race again.

[06:14:43] So, you have the opportunity all over again.

[06:14:50] Steal, like, literally steal this opportunity.

[06:14:54] Learn, and win in the AI-first world.

[06:14:57] That is what my advice is for everyone. And, like I said, the roadmap will have everything that you need to learn.

[06:15:06] Right? With that being said, I want to move to level 2.

[06:15:10] Level 2 is where you take it to the next level. Here is where you integrate connectors, something called as MCP, Model Context Protocol. Guys, Model Context Protocol is wide, and I want you to understand how powerful this stuff is.

[06:15:25] Model Context Protocol is the reason why AI will be able to do the job that you're able to do today. What the **** do I even mean by that? You see.

[06:15:35] Today, we use a lot of apps.

[06:15:38] Out there in the world to be able to do the jobs.

[06:15:42] AI will be able to use any app that you are using

[06:15:49] using something called as MCP, or Model Context Protocol.

[06:15:55] That is what MCP is. It's the thing

[06:15:58] Let's say you use a desktop app.

[06:16:00] Let's say you use a web app. A lot of people say, AI can't take my job, because you know what? I do a lot of my job around a lot of apps, and AI can't use the apps that I'm using, because it doesn't know how to use. As a result, AI cannot do my job. Guess what? It can, because of MCP.

[06:16:17] It can literally do every **** thing that you do today.

[06:16:22] If you don't trust me, let me show you this. MCP is what connects an AI assistant to the app that you are using. I'll show you a very, very, very simple example, okay? Let's say as simple as...

[06:16:36] Something like... ordering food. Guys, I've stopped ordering food. You won't believe it.

[06:16:42] I have connected my Zomato account to my Cloud account, and I just say.

[06:16:47] Hey, I feel super hungry, and I feel like eating some sushi today. I have my session getting wrapped up in one hour. Can you look for the best sushi places available in Bangalore that I can order food from? Research about them on the internet, read about them, watch some blog articles, and once you do that, right.

[06:17:06] look up my home address using Zomato MCP, see where I stay, and see if any of these places deliver sushi. And if you find one of the top places that can deliver food to my home in the next 60 minutes.

[06:17:20] I want to get 5 options like that, which I can order out of. This is what I want you to do.

[06:17:27] There you go, guys, I give a simple prompt like this to my cloud, and on my cloud, using MCP, what I've done is I've connected my Zomato account to my cloud.

[06:17:37] That's what I've done. I've connected my Zomato account to my Claude. As a result, look at this. Whenever you're hungry, you're sitting and scrolling on Zomato forever, right? I don't have to do that, because Claude will do the research, which it did. Now it is looking for available tools

[06:17:54] from the Zomato saved address, so it's finding my Zomato account, finding the available tools, looking for my home address, because it needs to know where I stay.

[06:18:03] Right? So it's looking for my home address. Once it finds my home address, look at this, it's found the home address at this point of time. Now, it is fetching for restaurants. Look at that. It's fetching restaurants at this point of time.

[06:18:18] And here it comes. The restaurants are fetched all by itself. And now, it's looking for the top names research. Misu, Fati Bao, Wabi Sabi, if they can deliver near my home address, where I stay in Kasavana Hali, and it's pulling all this information all by itself.

[06:18:35] So, instead of me wasting my time scrolling through Zomato, trying to find the place and everything, guys.

[06:18:42] just drop in a heart if you think this is crazy. It's a very simple example, but you know what? I know my friends who literally spend 30 minutes, 40 minutes, 60 minutes, scrolling on Zomato, trying to find the best food option. And here, AI did the research on the internet.

[06:18:56] found the home address, found the places, look at this, Misu Sajapur, Delu Sushi, Lucky Chan, Yuki Beer Library.

[06:19:04] And literally is telling me I can order from Yuki here, and I can, you know what, if I say, Yuki sounds good.

[06:19:11] Give me some options.

[06:19:15] It will literally go into Yuki, Find the restaurants.

[06:19:19] find the best options inside of Yuki, and let me place an order directly here as well. It'll show me a QR code if I want to pay using UPI. If I say cash on delivery, it will just set the order to me.

[06:19:32] That is the power of an MCP. It can lit... it is the future interface, guys.

[06:19:38] AI will be using almost all the apps that you use today. So what is left for us to do? Tell AI what we want. The person who's able to tell AI what they want is the one who's gonna win. And look at this, it has given me all these options, everything. If I just say Crunchy Salmon Maki, it will just order for me.

[06:19:57] That is the craziness of this. But now, this is a fun example. You might be like, Webhav, it's okay, I can order food myself. I'm not scared that AI is going to order food for me. What if I show...

[06:20:09] What if I show you one more example?

[06:20:11] I'll show you an example where most of us **** at

[06:20:15] A lot of expensive people pay a lot of money to do this, and today AI can do that for us.

[06:20:22] Confused what that is?

[06:20:24] Most of us **** at doing this.

[06:20:27] Because most of us are very bad at doing this, a lot of rich people hire very expensive people to do this for themselves. But you know what? Today, AI can do that for us.

[06:20:38] What am I talking about? I'm talking about... Stock investments.

[06:20:45] Everybody wants to invest in stocks.

[06:20:47] Somebody will tell you, buy the stock, you will buy that stock, and then you'll forget about that stock.

[06:20:52] And you'll start losing money. What I've done is.

[06:20:56] In India, there's something called a skite, which is by Zero Da.

[06:20:59] I've connected my Kite Zero Da account to my Cloud.

[06:21:03] And now, because I've done that, I can simply write a prompt like this. Hey, can you tell me... can you act like an expert financial advisor who works for all the millionaires out there?

[06:21:15] go through all the stocks that I've invested in using my Kite account, because I've given you access to my Kite account using Kite MCP. Go through all of it, and extend... do an extensive research on all the stocks that are losing me money. If there's a stock that is losing me money, read about it on the internet, and understand and give me the advice from all credible sources, and give me advices

[06:21:39] If I should keep the stock, or if I should sell the stock, or if I should hold the stock, or if I should buy more of it. I want you to do all of this

[06:21:47] for me, on the go, so that I can get a full, extensive analysis, and in a way, build me, like, a simple dashboard so I can analyze all of this for myself.

[06:21:57] There you go, guys. That's all I have to do. I've connected my Xerothai account, the Kite account, to my Cloud account. Of course, I'm not able to show you how to connect and all of that. It gets technical. I need to spend a few hours with you to be able to do all of this, but I'm showing you what is possible.

[06:22:15] So that you know this is possible, look at this, it's asking me to log in very quickly.

[06:22:20] Okay, I'm gonna quickly log in.

[06:22:23] Open link... Log in, it's asking me for my app password.

[06:22:29] What is my app password?

[06:22:33] Guys, this can literally buy and sell stocks. That is why the security.

[06:22:41] Okay, it is logged in right now.

[06:22:44] I just say, done.

[06:22:49] I just connected my Zero The account, the Kite account.

[06:22:53] To my cloud at this point of time, and you know what this is doing? It's directly accessing my Kite account and getting all the results. Look at this.

[06:23:02] It has gone into all my stocks, fetching all that information. I told it one very interesting thing. I said, for the stocks that is losing me money, read about that stock on the internet. Isn't that what we do?

[06:23:15] All the movement in stock market happens based on stuff on the internet, and here it is. It found out the 7 stocks are in red. Look at this. All these stocks are losing me money. Now, out of 54 stocks that... out of 67 stocks that I have, these are the stocks that are losing me money right now.

[06:23:33] My goodness, there are stocks where I've lost 43% of the money. Now, it is researching each one of them, which will take a few searches. Now, what is it doing? For each one of the stocks, it is doing a research on the internet, something that will take us hours of time if we want to do it.

[06:23:49] Look at that. It's just reading tens, like, literally hundreds of articles right in front of us, all by itself, like an expert, you know, investment banker, or whoever that is, and it's doing all that research for me.

[06:24:05] It's shipping like crazy for us, look at that. Still doing the research. It's because it's literally reading about each one of the stocks. There are 13 stocks that have lost money, so it's basically going in and reading about each one of those 13 stocks for me.

[06:24:20] It's still at Asian Paints right now.

[06:24:24] now it's gonna read about VMART, I'm assuming. There you go, it read about VMART. It did all the research, reading literally, I don't know, some 200 articles. And once it has done all of this, now it's gonna present us with findings.

[06:24:37] Something like this, investment advisors take a **** ton of money for.

[06:24:41] Right? On top of that, we don't have access to it because they expect you to have so much of budget for you to be able to do that.

[06:24:49] And look at that, our AI basically did all that research for me. It says, have enough research right now, let me build the dashboard first, and loading the design module, and it'll literally build the whole **** thing for us.

[06:25:04] This is the power of NCP, guys.

[06:25:06] Now, imagine this.

[06:25:07] As it is doing its job, just imagine this. This is just using your stock and food.

[06:25:13] An app like this can use your PPT software, can use your Tally software, can use your QuickBooks, can use your Salesforce, can use literally any software that you're using to be able to do the job.

[06:25:26] And if you want to do stuff like that, you have to use a slightly more advanced tool, like Goose.

[06:25:33] Goose is a tool because of which 4,500 people lost their jobs in the US, because this single tool that you see on the right side, right, became the reason for 5,000 people... 4,000 people to lose their job in the US in a company called us Block, the company that made Goose.

[06:25:51] The thing that makes Goose incredibly powerful, as the dashboard is being built on the left side, I'm talking about Goose here, the thing that makes Goose incredibly powerful is that it can work on your computer.

[06:26:04] It can work on a software that is inside of your computer. So I can literally select a folder, look at that. Let's say Downloads folder.

[06:26:13] I can literally select the folder on my computer. I have already connected Open Router to this AI model. I've set all of those things up by myself. I can literally write a prompt.

[06:26:23] Can you go through the folder that I've given you access, which is the downloads folder on my computer, and organize all the files inside of it, and tell me what are some of the files that I can delete from it to make up some space? I'm looking to free up about 50GB of my space, and I'm not sure what to keep and what to delete. I want you to do an analysis and tell me what to keep and what to delete.

[06:26:47] There you go, guys. I've given a simple prompt. Obviously, people didn't lose their jobs for a simple prompt like this, but I'm telling you the possibilities so that you get the sense of the power. I gave it access to a folder on my computer, said, go through the files and tell me what are the files that can

[06:27:03] you know, that can be deleted. It is now doing that right now.

[06:27:07] Because this goose has access to my computer, it can write shell programming to be able to literally do anything that I want to do.

[06:27:16] on my computer, on my behalf. Look at this, it has started to do the work, but parallelly, you can see what our clot did for us here.

[06:27:26] It said, overall, I've lost 25,000 rupees.

[06:27:30] Worst of absolute loss is Paytm, worst by down down is ITC hotels. Average down down is 16.1%. It's still loading this graph, and it's given me, look at this, the graph has come in right now, the whole dashboard is ready for me, and filter by all of this, look at this.

[06:27:47] Accumulate, that is, what are the stocks that I should buy more? These are the three. What are the ones that I should hold? It's asking me to hold Paytm, and it's also giving the reason on why.

[06:27:56] And also, it's asking us to reduce. It's basically saying I should sell the stocks.

[06:28:01] And it's asking me to review two stocks, that is Lopala and VMart.

[06:28:04] So guys, it literally did the full analysis for me.

[06:28:08] and built a dashboard that I can basically take action on.

[06:28:13] While it did that, Pallally, you can look at this goose, has gone through all the folders and all the files on my computer, and is literally telling me what are the ones, with high confidence, which is worth 52GB, that I can delete from my computer right now.

[06:28:33] What I'm showing you guys is an example of the insane possibility of AI gas.

[06:28:39] I'm just talking about the insane possibility of AI.

[06:28:45] Right?

[06:28:46] I hope you got a sense of this, guys. I hope you guys got a sense of this.

[06:28:52] Yes, drop in a heart.

[06:28:55] Alright, awesome. Now, I wanted to show you one more example.

[06:28:59] Okay? I want to show you one more very quick example and the power of AI, okay? And I did this very recently, so I thought it's a very good example.

[06:29:07] So... You know this, I... you know that I create a lot of content on Instagram.

[06:29:12] And this man, Adam Mosseri is, like, the CEO of Instagram.

[06:29:18] And you know what? On his content, he creates a lot of content. Look at this, that's 4 million followers, okay? And he creates a lot of content on do's and don'ts. Like, he talks about what kind of content you should create, what kind of content you should not create, what are the things you should do, what are the things you should not do, and all that good stuff is what Adam talks about on his Instagram.

[06:29:39] And let's say I want to know the best advice from him, the recent changes that have happened to Instagram. So, there is one thing that I can do, is that I can sit

[06:29:49] And maybe watch the recent 100 Instagram posts of Adam, and understand what are the things that have changed about Instagram recently. That is something that I can do. But going through 100 Instagram Reels will take me, I don't know, 3-4 hours. It's a waste of time.

[06:30:07] Right? And I will forget a lot of information as well. So how do I make sure I get all this information done, sorted very, very well? Well...

[06:30:17] I could use MCP for that. You know, there is this tool that I know of called as Appify.

[06:30:24] Appify has a scraper called as the Instagram Scraper.

[06:30:29] And if I have to manually do it, I have to copy-paste each of the Instagram video or post of Adam to pull that information. But what if I connect this Instagram scraper to, let's say, something like Claude, or for that matter, Goose?

[06:30:47] We're using Goose, right? Goose is very powerful, like I said.

[06:30:51] What if I connect something like this to my goose?

[06:30:54] And I say something like this. I'll be like.

[06:30:58] Hey, I want you to go through an Instagram profile that I'm gonna share with you. It is of Adam Mosseri, who is, like, the CEO of Instagram. I want you to go through 10 of his most recent Instagram posts, it could be Reels, Kerosals, or whatever that is, pull the information using Appify.

[06:31:18] You can do that using MCP, pull all the information, go through all of that information on my behalf of the top 10, let's say, Instagram Reels. You go through the top 10 Instagram Reels of Adam, watch all of them, download it.

[06:31:32] Pull the transcript of it. Once you pull the transcript of it, read the transcript of it, and understand what is written in the recent 10 Instagram reads of his. He often gives a lot of advice to Instagram creators on what they should and what they should not do. Bake all this information into a single note for me.

[06:31:52] which I can read, and I can understand about all the changes that have happened on Instagram.

[06:32:03] For whatever reason, this thing failed. Okay, there you go.

[06:32:07] There you go, guys. That's the prompt that I wrote, okay? I'm basically asking AI to do all the work for me. Click on the send. It's just an example of 10 drills, guys. Now, what it can do is, because goose

[06:32:20] has access

[06:32:21] to Appify, which has access on how to scrape, something that a human will take 5 to 6 hours to do, all of a sudden, goose will be able to do it all by itself. You can look at that. It has already found the Appify Instagram scraper, which is perfect for the task, and right now, it's fetching.

[06:32:41] all the stuff from the Instagram directly. I don't have to do anything. I just gave the prompt, and it is doing all the magic all by itself right now.

[06:32:54] Look at that, it's doing all the magic, and as it's doing its magic.

[06:32:59] Do you guys want to see one more thing that I do with MCPs? Boom in the chat if you want to see one more thing that I do with MCPs.

[06:33:09] Yes? Okay. As our goose, one of the MCP agents, Agent Harness, is working to do some work on what are the things that have changed on Instagram for us, I'm gonna open Claude.

[06:33:23] And you know what? I feel like playing pickleball today.

[06:33:26] And funny is a busy guy, right? I wanna play pickleball. Funny is a busy guy. If I send him a WhatsApp message, he's probably not gonna check, so I have to give him a call.

[06:33:37] But I'm too lazy to make a call. And this is actually me, okay? I'm always lazy to make a call. I don't like making phone calls, and people, when they don't respond to messages, I have to call them!

[06:33:49] So what do I do? I literally built an agent for that. I can come here, and I can just say, hey, can you call Funny and tell him that I want to play pickleball after the session is over? So, it would be great if we can book

[06:34:06] you know, a coat near my home, so that we can play pickleball. So please call him on this number.

[06:34:15] And you know what?

[06:34:17] here is his number, and I'm not gonna show you the number that I'm gonna enter, but...

[06:34:23] Also, make sure that, during the trail of this process, you don't show or you don't open up the phone number of the person that I just shared about, because I'm in a session, and I'm literally sharing the screen to people. So don't show the number at all going forward.

[06:34:41] Okay? I just put that prompt so that it'll not, by mistake, show the number, and let me enter the number here.

[06:34:52] Click on send, okay? Now, let it do its magic. I know you cannot see the number. The number is right on this corner, right? And I don't want you guys to see the number. As a result, I've put it here, but let it do its magic. I've given a number that I have access to, it's my secondary number, and you know how it's working?

[06:35:12] It's basically... you remember WAPI? The one that I used the AI agent tool for?

[06:35:17] which was able to do voice agents. I've connected WAPI to my cloud.

[06:35:22] As a result, all I have to say is make this call to this person and deliver this message. It will literally make the phone call on my behalf, and you'll see that happening very, very soon. It's doing its work right now, so I will let it do its work.

[06:35:36] Look at that, it's doing all that work for us.

[06:35:39] At this point of time, it's updating, it's doing all that good stuff for us, and very soon, I'll start getting a call, okay? It'll go inside of WAPI,

[06:35:49] Guys, I've started to get a call. Look at this.

[06:35:53] Jerry is calling me, that is my AI executive assistant.

[06:35:57] Hey, this is Sonny. This is Weibur's DI Executive Assistant. He asked me to give you a quick call about pickleball.

[06:36:04] Hey, yeah, I'm speaking.

[06:36:08] Perfect, Sonny. So, Vivab's in a session right now, but he's super keen to play pickleball with you once it's done. He's wondering if you can book a court somewhere near his place in Kasavana Hari for right after. Would that work? Can I get a friend along?

[06:36:20] Just playing with WebHub could be boring.

[06:36:24] Fair point, Sunny. Definitely bring a friend. Vivab didn't say anything about it, just being the two of you, so I'm sure he'd be cool with it. Can you book the court and get that sorted? He'll confirm the timing directly with you after his session.

[06:36:37] Alright, awesome, thank you.

[06:36:40] And folks, you just saw what just happened. You just saw what just happened. The AI just made the phone call on our behalf.

[06:36:53] Isn't that just insane, guys? Isn't that just insane?

[06:36:57] You just heard the call, and you know what? After a while, it will basically pull the whole transcript

[06:37:03] It'll pull the whole transcript and will literally tell me what happened in the call. And parallelly, if you see this.

[06:37:10] Parallelly, if you see this, here, Adam

[06:37:16] literally, it went through all the transcripts, you can see this. It went through all the transcripts and gave me a detailed breakdown of everything, guys. Adam Mosseri's Instagram Creator Insights is right here. Major policy change, you can see this. It talks about what's changing, how to check. Creator tips.

[06:37:35] that he has given. Scheduled reels don't hurt your reach, is what he says. New features is scheduled trial reels.

[06:37:41] the DM features that have come in recently, these are all the things that he has covered on his Instagram already.

[06:37:48] And that is what is showing up right now at this point of time.

[06:37:53] Now, a lot of smart cookies probably found the number, okay? Because in one screen, it was visible, and, like, freaking idiots, they will call the number. First of all, all the people who think are very smart, and they found the number, and they're gonna call my number, you're not gonna get through me, because if you call my number, it'll go to my AI agent.

[06:38:13] My AI agent will talk to you first. And if it is important, that is only when I get to know it's important. Two, that number is not my main number. I turn that off the moment the session is over. So don't act very fancy. And three, if... I'll make a list of all those phone numbers, and I'll probably put it on my Instagram as well, saying, clear spammers.

[06:38:34] So that you guys, if you try to spam, you will be on my Instagram with your phone numbers opened up, you will know what it feels like. So don't act funny. I got 3-4... I got 3-4 messages from my AI agents that I'm getting back-to-back calls. Looks like a few...

[06:38:49] idiots found the number and they want to call. It's so funny that you guys think you're smart. That's dumb, guys. That's really dumb. You guys should not do it. That's what I would say. But with that being said, here where it is.

[06:39:01] And like I told, I have an AI agent to take care of all the spammers as well.

[06:39:07] Right? With that being said, you saw the power of MCP. You saw the power of MCP just now. This is what is possible. We got AI,

[06:39:19] to go through a bunch of Instagram Reels to find us insights off Instagram Reels to be able to share with us. We got AI to make phone calls on our behalf. We got AI to basically do research for us. We got AI to do... understand how our stocks are performing for us.

[06:39:38] isn't what this is, is nothing short of insane. Drop a comment, insane, in the chat if you think this is insane.

[06:39:54] This, my friends, is the power of MCP. And you can literally automate anything in your life using this.

[06:40:02] Now, I don't have the time to show you how I created these MCPs, how I set them up, how I automated stuff, because that will take me easily a few hundred hours, okay? There is no other way to be able to do that. But.

[06:40:17] If you follow the roadmap, If you follow the roadmap, like, you...

[06:40:21] That will be given to you after the end of two days is over. You will be able to accomplish everything that you saw right now.

[06:40:28] You'll be able to accomplish everything that you saw right now. In... at max, maybe, I think it's gonna take you, like, I think 4 months for this, so I think 3 to 4 months for this, 3 to 4 months for this, maybe 6 to 8 months for you two guys to, like, master level 1 and Level 2, if you're able to dedicate 10 hours a week.

[06:40:47] How many of you guys are not gonna give up and are gonna learn? Drop a heart.

[06:40:52] You're not gonna give up, and you are going to learn. You're gonna learn the power of MCPs, you're gonna learn the power of AI, and you guys are gonna do it.

[06:41:01] Using the roadmap. You will have all the information, it's on your execution for you to know if you'll be able to do it or not.

[06:41:08] Yes, that is Level 2. Now, we're just getting started, we're just getting started. Level 3 is all about images and videos. A lot of people think AI is just about

[06:41:20] You know, AI is probably just about, like, text. But AI is a lot more than text, and I want people to realize that. AI is images, AI is videos, AI is everything around it. In fact, let me show you something, okay? If I open my YouTube...

[06:41:39] I don't know how many of you guys, follow me on my YouTube, I just wanted to show you something.

[06:41:48] So, what we did was... We got an AI.

[06:41:52] Okay? We got an AI, And we got it trained.

[06:41:57] With a lot of my faces, a lot of my images. As a result, if you see all these images of mine, right, in the thumbnails, they are all completely AI-generated. They're not mine. They're completely AI-generated thumbnails.

[06:42:12] They're end-to-end AI-generated. I don't have a picture with me looking short. I don't have a picture of me looking surprised, right? I don't have a picture of this. I don't have a picture, any of these pictures for that. I don't have a picture with a spacesuit. I don't have any of these guys. These are completely AI-generated, because we trained an AI model.

[06:42:31] To look... to generate images that looks exactly like me.

[06:42:37] And you know what? It works like magic. It literally works like magic. And not just that, I'll show you my... quickly my Instagram as well.

[06:42:46] And on my Instagram as well, I've used this same technology to be able to... look at this. You see this image that is, AI is now a weapon. You see this with me wearing a black hoodie with screens in the back end.

[06:42:58] This one, where I look straight into the screen, me looking like a rapper, at least trying to, me wearing a hoodie here, looking surprised. All these images that you see on my Instagram are completely AI-generated. They are generated using

[06:43:13] you know, we took an AI image and model, trained it with a lot of images. As a result, now my team can just prompt what the image should be, like WebHub looking surprised with glasses holding and wearing a hoodie. It just generates that image for me.

[06:43:28] Now, guys, just because I just showed you my YouTube and Instagram, I just wanted to do a shameless plug right now. I create a lot of insane content on my YouTube. For example, stuff like this.

[06:43:42] So, ChatGPT just did something way better than what Claude has done so far. They put AI agents directly inside your workplace. And I do not mean another chatbot you have to open up and prompt. I mean actual agents that sit inside your Slack, your Gmail, your calendar, and work alongside your team, like a co-worker you just hired. You tag them, they do real work. Now, Claude has had... I'm going to show you everything.

[06:44:05] So guys, I create content like this on YouTube, you can see them, and I also create a lot of content like this on my Instagram. I have, like, 2 million followers on my Instagram. That could give you 13 extra years of waking life. Humans spend 26 years of their lives sleeping. That's one-third of our life gone.

[06:44:22] Or things like this. They dropped two major updates this week, which made Sam and Elon rethink their next updates, and the AI war just got brutal. Welcome to week 43 of AI Updates of the Week. Let's dive in.

[06:44:36] You just heard, week 43. So, every single week.

[06:44:39] I have been dropping AI updates.

[06:44:42] on Instagram, on YouTube, so that all of you guys can learn. So I'll strongly recommend you guys to follow, both Instagram and YouTube, so that you're always on top of the page. And I can see all the quality content. It gets me millions of views, guys, literally millions of views.

[06:44:58] Right, if you scroll, look at the number of views that I get on my content, and of course, right, you'll also see me doing podcasts with my friends. Are there a single-person company, Banana Hector? And all of that, you'll be able to see that content as well, but you'll see, all this content is gonna help you quite a lot.

[06:45:13] Right? So, I'll definitely expect you to go and follow. But...

[06:45:17] Why did I show you these videos?

[06:45:21] What if I tell you this person that you see right here is not me?

[06:45:25] It's my AI clone. The audio that... And it is already happening. Oracle fired 12,000 people in India. That is not me either. That's my AI clone as well. Every single video that you saw so far is completely AI-generated.

[06:45:42] I have... I basically have AI avatars, look at that, that's an AI avatar. This is one more AI avatar of mine. In fact, the YouTube video that you saw right now as well, this is not me either. That is my AI clone.

[06:45:56] Every single piece of content that is on my Instagram, that is on my YouTube, is completely AI-generated.

[06:46:04] And I get literally millions of views.

[06:46:09] And let me tell you one more thing, just in case if you don't know this.

[06:46:13] I basically have, at this point of time.

[06:46:17] 5 plus million followers. This is my content dashboard, by the way.

[06:46:23] I basically have... look at that, I have 5.3 million followers across my social network that you can see.

[06:46:32] every single piece of content that I create on Instagram, on YouTube, on every other platform out there. Guys, I literally generated 45 million views in the last 28 days. 45 million views. That's 45 lakh views.

[06:46:47] Sorry, that's 4.5 crore views, okay? All of it is completely AI-generated.

[06:46:54] My audio is AI, my video is AI, the script is written by AI, the editing, of course, is done by a human.

[06:47:01] This... is what?

[06:47:03] is the power of this. Every single video that you see is AI-generated as well. And let me tell you one more crazy thing.

[06:47:10] The one more crazy thing that you need to know is, all this content that I create, gives me...

[06:47:16] sponsored videos. For example, right, if I scroll through, you will see a lot of videos which are sponsored. For example, this one. This video is sponsored by a company called as LoveArt. You can see I've tagged Lavart

[06:47:29] This is a video that a company paid me to create, and you know what? This video was created by AI as well. I didn't create it. It's my AI clone that created it.

[06:47:39] And you will see a lot of videos like this as I scroll through, which are all, for example, Trite, the beverage brand, paid me to make this video. You can see it's a paid partnership.

[06:47:51] And even these videos, look at this one, this is paid by AMD, which is one of the largest companies in the world. AMD paid me, you can see, sponsored by AMD. Completely AI-generated. I have generated over, I have to say, over 2 crore rupees.

[06:48:06] in revenue from brands paying me money to create content for them, and even that content is completely AI-generated.

[06:48:14] Are you able to get a sense of this? So, that is the power of AI today.

[06:48:19] You can use incredible tools, like Comfy UI,
[06:48:23] like, Soul 2.0, like, you know, SynthRub.
[06:48:27] like, Whisper, like, you know, you can use stuff like, smallest.
[06:48:33] And you can use Higgs field, you can use a lot of these tools, Seed Dance 2.0, put all of them together, train your audio, train your video, train your face to be able to generate videos, to be able to generate audio, to be able to generate images, all without doing anything.
[06:48:52] And you know what? That makes human.
[06:48:55] And on top of that, because we're talking about money, let me show something to you very openly, just in case if you're wondering, what if Webb is lying, right? If I go to...
[06:49:04] analytics.
[06:49:06] This is my YouTube analytics. Just YouTube. Just YouTube, okay, has paid me \$8,000. You can see this. Just YouTube has paid me \$8,000 in the last 30 days. That's 8 lakh rupees for creating content, all using AI again.
[06:49:22] So, I want to tell you that you need to go deep, not just with text images, but also audio and video and everything around it, and that is what will help you to truly become an AI generalist. Because as an AI generalist.
[06:49:35] Problems are not gonna come to you in form of just text. You have to be an AI-first problem solver. And for you to be able to solve problems using AI, you cannot say, oh, I can't do images, I can't do video, I can't do audio, you should be able to do every **** thing.
[06:49:53] And for that, You have to learn everything out there.
[06:49:59] Makes sense.
[06:50:02] Guys, if you think this is insane, drop a comment, boom, or insane in the chat, so that I know I'm not talking to myself, and you're able to get a sense of what I'm trying to tell you guys here.
[06:50:13] Talk about the possibilities. Talk about the madness that AI can do today.
[06:50:19] Yes!
[06:50:21] Awesome.
[06:50:22] Awesome. Guys, you can learn everything in Level 3, like cloning your face, cloning your image, cloning your audio, cloning your video, everything around it. It'll probably take you about 4 months to learn. So I think Level 1, Level 2, Level 3 should not take you more than 1 year if you're able to dedicate
[06:50:37] at least 10 hours a week. You dedicate 10 hours a week, I can guarantee you, by following the roadmap, you can do level 1, level 2, level 3, all by yourselves.
[06:50:46] It's all about execution. You'll get that roadmap for free any which ways. Just don't give up on that.
[06:50:52] These are three levels. Before we move on, I wanted to show you a video that a few of our learners created. It's a very
[06:50:59] Very cool one, check this out.
[06:51:17] SR Plantis.
[06:51:20] Food grows.
[06:51:22] No more mama chasing. Or... we just stabbed Butler.
[06:51:31] teeth!

[06:51:34] Brush!

[06:51:36] We wrap the dead, now we brush the living.

[06:51:41] Yes, it is nothing, but it will make everything possible. Jaha, your cousin's farming, your brother is trading, and you, Poocha, drawing nothing all day. And one day, me fly! Me amor! I will finally see you fly! Woohoo! Imagine hearing your wife from across the world.

[06:52:02] Boy one!

[06:52:06] I know new ideas sound ridiculous.

[06:52:09] Stay curious, and stay ahead in the AI-first world.

[06:52:14] So guys, that was,

[06:52:16] video created by a bunch of our learners that you just saw, completely AI-generated, and I want all of you guys to have the capability of all of these things as well. It's really, really powerful. Just don't give up on this, and continue to learn. That's my only ***** advice for all of you people. With that being said, with that being said, with that being said, let's move on right now to my... one of my favorite levels.

[06:52:39] You know, you played with text, you played with images, you played with audios, you played with automation, you played with a bunch of things. The future of the world that we're gonna live in, the AI-first world that we're gonna live in, is gonna revolve around one thing, and that is called as an AI agent.

[06:52:54] So you need to learn how to build AI agents. You need to learn the tools around Mix, Zapier, N8N, Routines, and so many new harness tools that are coming up to be able to get the most out of AI.

[06:53:08] And let me quickly show you, because we are following all-around demos, right? Let me quickly show you an agent that I literally use every single day, which is incredibly powerful. It's very, very simple, okay? This is Jerry.

[06:53:22] Jerry is my executive assistant. What is an executive assistant? An executive assistant is someone

[06:53:29] who does the job for me that I don't want to do. So, what does it do? It handles my email, it manages my calendar.

[06:53:36] It attends meetings on my behalf, takes notes of them. I can literally ask any question to Jerry, and it'll be able to do them.

[06:53:45] all that good stuff Jerry can do today. Let me show you an example, right? Let's say, if I say something like, write

[06:53:54] and email to Funny in my team.

[06:53:59] asking him... to prepare the MIS report by September 5th.

[06:54:09] I can write a prompt like this. That's it, guys, I've not said anything. I didn't give Funny's email ID.

[06:54:14] I didn't write what email to exactly write.

[06:54:18] I just said, write an email to Funny, ask him to prepare the MIS report by September 5th, and that's all I said.

[06:54:25] The AI is smart enough.

[06:54:28] It is smart enough to understand who Spunny is, to get his email ID,

[06:54:34] to, once it finds its email ID, to compose the email, and also to send the email.

[06:54:40] And literally, I can ask any question for that matter. For example, look at this. I just asked before the call today, right, what are the top AI-updated models on the... in the open source world? It was able to do all that research and tell me that as well.

[06:54:53] Right? And look at this. It says, on it webhub, drafting a crisp email to Funny right now, asking him to get the MIS report ready by September 5th. Give me just a moment. So it can do all of that. Let's say, meanwhile, I can say one more thing also. Book the calendar of Funny and me

[06:55:09] on 4PM, September 10th.

[06:55:14] With... Title, MIS review.

[06:55:20] I can just say this as well.

[06:55:22] And...

[06:55:23] Let me open my calendar, right? So let me just go to September, just so that you know that there is nothing on September.

[06:55:30] July of those... September, but there you go.

[06:55:33] I said, which date? September 10th? Okay, you can see this, there is nothing on September 10th at this point of time. So I've given it two tasks. Fan is right here. So it said, okay, looks like the email has been sent. Fani, did you get the email? I got the email. It said the email has been sent.

[06:55:49] Yeah, I got it. I think it has written down the... Do you want to show it?

[06:55:54] Yes, you can see this. Hope you're doing well. Could you please prepare the MIS report and share it? Done, Weberf, the email has been sent to Funny. And look at this, guys! I don't know if you just noticed.

[06:56:04] Done, the MIS review has been booked, and here comes the calendar booking as well. It has blocked out the meeting right here on the time that I said.

[06:56:14] as well. Now, it can do all these fun stuff, and I can also say something like this, right? I can say, hey, I could not attend the last engineering stand-up meeting that happened. Could you quickly pull me all the notes of what happened in the last meeting, and tell me, because I don't want to miss out on anything important.

[06:56:32] I can simply send a prompt like this. In fact, I don't have to wait for it to run. It can take about 5 minutes to run, but I'll tell you, I ran this some time back, right? That's how I remember, because I had missed that specific meeting. Look at this. Could you check the last engineering stand-up?

[06:56:46] It went through all of this, pulled the engineering stand-up meetings, found the meeting, and then literally told me what was discussed with every single person in the team during the meeting when I was not even available on the meeting.

[06:57:00] So what it does, look at this, I started to do the work again, but the reason why I'm showing you this is what it does is, as a founder, I'm not able to attend every meeting that there is. Because life happens, I get busy, and sometimes I can't do it, right? But what this basically does for me is it starts to attend meetings on my behalf.

[06:57:20] It takes notes.

[06:57:21] GoToMeetings keeps everything ready, and once it does.

[06:57:26] What it will do is, I can simply ask a question like this, and can tell me what's happening.

[06:57:31] Now, this is Jerry 1.0. Right now, I'm building something called as Jerry 2.0. Jerry 2.0 is even wider.

[06:57:40] Now, to Jerry 1.0, I have to ask a question, and it will do the job. Jerry 2.0 does the job all by itself. For example, to Jerry 2.0, which is still something that I'm still building right now, so it's not very ready right now, it can do a bunch of things. One thing that it can do is something like this.

[06:58:00] You know what it does? I'll show you this example. This is a Jerry 2.0. What it basically does is, what you're seeing at this point of time is a summary of everything that has happened on my Twitter. What do I mean by that? You see, I want to stay on top of AI.

[06:58:16] And one of the best information that is available for me to stay on top of AI is basically to watch Twitter.

[06:58:25] And I basically don't have the time.

[06:58:29] to go watch Twitter, scroll Twitter, I don't want to waste my time on Twitter. You know what I've done? I've given Jerry access to my Twitter account. I've given Jerry access to my browser.

[06:58:40] As a result, every 3 hours, Jerry opens my computer, logs into my Twitter, scrolls on my feed.

[06:58:48] pulls all the information that has happened on my Twitter, and sends this information to me, right here inside of my Slack.

[06:58:57] So, it does the work for me. Let's say I have a job, saying that, hey, you know what, I want Jerry to go through a website.

[06:59:04] And let's say I want the best coupon code for an iPhone that I want to buy, and I don't want to spend time looking for coupon codes, applying the coupon codes, seeing if it is working or not. I can just give a task to Cherry. Jerry, I'm looking for an iPhone, this model, I want it to be shipped to my home in Bangalore. Go look up all coupon websites, try all the coupon websites.

[06:59:25] see which coupon is working, and after the task is done, make sure you give me one coupon, which will give me the highest discount possible, and the website that will allow me to do. Jerry will go out there, use its own computer to be able to do all this good stuff.

[06:59:39] There is one more thing that I'm building inside of Jerry. It is not still completely done. I'm still testing it, and let me show you, it was working before I stopped it because, you know, it was breaking, and I haven't got time to go ahead and fix it. And that was basically managing my emails.

[06:59:56] It's still not completely built, guys, so I'm just telling you as a figure of speech, but I can show you a couple of them, if I can find them. So, you see, what was happening with me is...

[07:00:05] When it comes to emails, I'm very, very bad, because I literally get hundreds of emails every single day. So, initially, I used to ask AI, is there anything important, this, that, and all. And I have that habit of asking once a day, and I don't have the habit of checking emails. I'm majorly on Slack.

[07:00:21] So, I created a playbook for Jerry. You know what that playbook is? Jerry, right now reads my email every 3 hours.

[07:00:29] understands what has come on the email. If nothing important has come, it doesn't bother me. If something important has come that needs my attention, it messages me on my Slack.

[07:00:41] Only if the email is very important, and it needs my attention right away. But, let's say the email... I don't reply on Slack in one hour. It's very important. What will Jerry do? Jerry will WhatsApp me.

[07:00:53] Saying, hey, there's a very important email that you've got.

[07:00:57] I sent it to you on Slack, you didn't see it. As a result, I've sent you on WhatsApp. If I still don't reply.

[07:01:04] on my WhatsApp, saying, I'll take care of this. What will Jerry do?

[07:01:08] Jerry will go make a phone call to me. It will literally call me.

[07:01:14] Saying, bro, you need to check your email. There's a very important email. And what if I don't lift my phone?

[07:01:22] it will literally call someone in my team. There's a person called Chetanya? It will literally call Chaitanya in my team.

[07:01:32] if I don't lift my phone, if it has anything to do with finance.

[07:01:36] Anything like that. If it has something to do with ads, it can call my marketing team, saying, hey, there's an email that WebHub has got, it is very important for marketing team, maybe, let's say, meta ads have stopped, maybe you should get in touch with WebHub right away. He's not responding to me, you try to get in touch with him.

[07:01:53] If it's finance, it'll go to my finance person, like I said.

[07:01:57] Right? This is what Jerry will literally do on my behalf.

[07:02:04] That is the madness. I'm building it, I'm trying to find those test experiments so I can show you. It's not completely built yet, quite frankly. I'm still working on it, right?

[07:02:15] I can't find it, guys, sorry.

[07:02:31] There are just so many messages, I'm not able to scroll only.

[07:02:34] But yeah, you get the point, you get the point.

[07:02:37] Oh yeah, look at this, guys.

[07:02:40] Look at this. I got one. I don't know when was this. It was a very, very old one, you can see this. This was when we were doing the ICC T20 World Cup. There was a very important email that came from Hotstar, because I don't know if you know this, we were the official sponsors of the T20 World Cup, Cricket World Cup.

[07:02:58] And there is some report that failed due to incorrect IFSC, and that email came. Jerry prioritized that email and sent that to me on Slack the moment it arrived. You just saw that email.

[07:03:11] So I was... I have turned that off because I'm still baking that in, but I wanted to show you the power of what AI can do at this point of time, and what Jerry's able to. Maybe in 3-4 months, you'll be able to see this Jerry doing a lot more. This is level 4, guys.

[07:03:26] This is AI agents. You need to learn how to build Jerry of yours. You need to learn how to build agents of yours. You need to learn how to build these tools of yours.

[07:03:35] If you don't do it, there is no way you can actually go deeper and win, because most of the work will be actually done by these AI agents going forward.

[07:03:44] There is no other way, there is no way for you to win if you don't know how to manage and run these AI agents yourselves.

[07:03:53] and learn how to do it. Again, all the things like NATs of the world, makes of the world, zapiers of the world, routines of the world, you know, harnesses of the world, everything, we have captured that in the roadmap. I think doing agents will probably take you about 6 months to learn, if you invest 10 hours, but invest those 6 months.

[07:04:11] It will really, really change your lives.

[07:04:15] And finally, the last thing that I want to talk about Was basically vibe coding.

[07:04:25] We live in a world.

[07:04:27] We'll literally live in a world where AI Using AI, anybody can build.

[07:04:35] I have been.

[07:04:36] You can build. Anybody can build.

[07:04:39] And you know what? Anybody should be able to build. It doesn't matter what you do.

[07:04:44] Because the best solutions to problems is by building.

[07:04:48] And the day that we're living in today, we don't have to be a software engineer anymore to be able to build products using AI.

[07:04:56] I'll tell you one example. We had one of our graphic designers who was leaving her job.

[07:05:02] You know what? We didn't hire a graphic designer. I built an AI tool in 3 hours, which is this, the AI Creative Strategist, which does the job of a graphic designer for me. Now, my team can literally come and say they want how many creatives?

[07:05:15] They'll update the copy right here, whatever they want, click on Generate Premium Creatives, and you know what? AI, using this tool, the tool that I've built, will generate 5 incredible prompts for me, which are super technical, which a human cannot write. Look at the kind of prompts it wrote.

[07:05:32] Because these prompts are trained

[07:05:35] I trained an AI model to generate prompts which are similar to the winning ad creatives that we have got. So I built an AI graphic designer that generates prompts for me, which I can use inside of ChatGPT to be able to generate stunning ad creatives. Now that this is done, I've got 5 creatives, I can literally click on

[07:05:56] open all tabs right here, and you can see this. Five different ChatGPT tabs opened up automatically. Oh my god. I know, for whatever reason, ChatGPT is not opening on this browser. I have to show it to you on Chrome.

[07:06:08] But literally, it will open 5 different windows, copy this prompt inside of the ChatGPTO window, and execute it as well.

[07:06:17] That is the power of this. In fact.

[07:06:21] Let me show this to you very quickly. Let me open this on Incognito.

[07:06:27] Do the same.

[07:06:29] My god, it's asking me to log in right now.

[07:06:35] Let me see, will it allow me here?

[07:06:38] Nope, it's asking me to log in on other windows, I don't have the time, guys. But you get the sense.

[07:06:42] We literally built a graphic designer, which can use

[07:06:47] the AI capability to be able to generate an image. Now, let me show you one more. This literally saved me one crore, okay? I'm not even kidding. So, we were looking for a CRM, and HubSpot literally quoted us 1 crore.

[07:07:02] One crore, guys, I'm not kidding. HubSpot quoted us one crore for a CRM. I said, ***** it. I spent four days, literally 4 days, to literally build a full-fledged CRM inside of Replit.

[07:07:17] And literally built a full-fledged CRM inside of Replit without... and these are all things done without writing a single line of code.

[07:07:24] Not that I've written code for this.

[07:07:27] I've not written a single line of code, and it has managed to build it. Let it quickly load, give it a second. It's a fully blown CRM. It can... look at that. It has the analytics dashboard, it can accept learners, it has email history, I can add new acceptances, I can bulk upload people, it has advanced settings like email, WhatsApp, payment gateway, open AI keys, and everything around it. It literally is a

[07:07:50] full-blown CRM. Something that I've wanted from HubSpot

[07:07:55] those guys quoted me 1 crore, that's \$100,000, so it's one crore. Actually, one \$20,000, \$10,000 a month is what they quoted, and I was like, ***** it, not happening.

[07:08:05] And I built the **** thing for me.

[07:08:07] And as we speak at this point of time, like, quite literally as we speak.

[07:08:12] I'm literally building an app. I told you I'm working on an app at this point of time. I'm literally VIP coding, guys, and this time I'm VIP coding on Codex. While the session was happening, I was wipe coding, and what was I building?

[07:08:26] I was building a content operating system for me.

[07:08:29] Which is basically tracking all my followers.

[07:08:32] all the content that I get, how is my YouTube performing, how is my Instagram performing, how's my Twitter performing, Facebook, Threads, LinkedIn, newsletter, what are the ones that are working? The opportunity inbox, basically the opportunity inbox is, it reads all the DMs from all social handles.

[07:08:51] Every single DM. It reads my lingering DMs, Twitter DMs, Instagram DMs, Facebook DMs, looks for opportunities. People must have sent me an email to do a brand collab, to invite me as a speaker, and whatnot. It goes through every single comment of mine, and maps them into opportunities. Look at this.

[07:09:10] 17 hours ago, I got a message from someone, which was for a corporate talk.

[07:09:15] This was 6 days ago, someone sent me a message on my Twitter for a corporate talk. It goes through all that information and builds this pipeline for me. And not just this, I can go deeper into each of the social networks. This is my YouTube.

[07:09:29] Okay? This is my YouTube. I'm building a dashboard for myself, where I can not only access the content that I have, I'm also building something called as competitor Intel.

[07:09:41] What is competitor Intel? If I go to Competitor Intel, it can fetch information of what is working for other creators in the AI space, so that I can always stay on the top.

[07:09:54] The whole thing, guys, it is tracking these keywords inside of YouTube to understand who are creating content. Look at that, it's loading right now. Finding the top-performing videos inside of this, so that I can literally go and build videos like that, and does the same for everything.

[07:10:10] It does the same for newsletter, it does the same for Instagram, Twitter, LinkedIn, all that good stuff, right here. Look at this.

[07:10:19] The whole app is being vibe-coded right now by me. And on top of this, I'm gonna build the layer of Jerry right now. So, I don't have to watch this content. Jerry can sit and watch this content for me.

[07:10:31] So, vibe coding has enabled me like crazy, and I really hope all of you guys get to a portion where you guys are able to do all this good stuff.

[07:10:43] So, folks, these are the kind of stuff

[07:10:45] that I am doing on an everyday level. You can do all of these as well if you invest that 2 years of your time, 18 months to 2 years of your time, learning AI. And you don't have a complaint, you don't have a reason to complain, because we are giving you the roadmap end of 2 days.

[07:11:03] You get the roadmap, you use it, you spend the next 18 months, 10 hours a week, and you learn and actually win in the AI-first world.

[07:11:13] So, how many of you guys are gonna give your 100%?

[07:11:18] Over the course of next 18 months, to win in the AI-first world, drop in a heart.

[07:11:23] drop in a heart if you would want to win in the AI-first world, and we're going to give you 100% to make sure you're truly becoming an AI generalist when you get the roadmap.

[07:11:39] Awesome.

[07:11:40] Absolutely awesome. So, folks, I have a question for all of you people.

[07:11:45] Based on everything that you've seen so far.

[07:11:48] Based on everything that you have seen so far.

[07:11:52] Is it fair to assume that AI is going to take 4 out of 5 jobs? Let me know in the chat.

[07:11:58] Here is what I will tell you. AI is not gonna take even a single job.

[07:12:02] Every single job out there is going to fundamentally change.

[07:12:08] We will not need... you see, this is what people are not talking enough about. We will not need 5 humans to do the same job. We will need 1 person.

[07:12:18] who understands AI to do the job of 5 different people.

[07:12:23] Do you guys agree with that? Give me a thumbs up. We will need one person to be able to do the job of 5 or 10 people if that person know how to use AI tools, AI workflows, MCPs, agents. You saw a glimpse of that.

[07:12:37] That is what the jobs are evolving into. And when I say jobs, I'm not just talking about people who are in their jobs. I'm talking about everyone. Working professional, entrepreneurs, everyone for that matter.

[07:12:50] have to do this. Have to level up. And the only way to stay ahead, and not get some... not get your job to be bulldozed by someone else who's using AI, not by 2030, by... not by actually 2027, is actually truly by becoming an AI generalist.

[07:13:09] AI-first problem solver, and it doesn't matter who you are. Let me make that extremely clear. You could be an entrepreneur, you could be a working professional, you could be doing both. It doesn't matter what you do, it doesn't matter who you are. I want you guys to be focused on this. I'm turning off everything around it.

[07:13:27] you need to level up as an AI general. Let's say... let's say you're a working professional. Let's say you're someone with 10 to 20 years of work X.

[07:13:35] I'm going to take...

[07:13:37] I want you guys to take this advice very seriously if you're someone with more than 10 years of WorkX.

[07:13:42] the world is going to be uncomfortably hard for all of you people, especially for people with more than 10 years of experience, and I'll tell you the reason why. People with experience are very hard.

[07:13:54] When it comes to adopting new things. They are very resilient to change. I can say that because I'm one of those people. I have more than 10 years of WorkX. It's very hard... we are very resilient to change.

[07:14:06] And you know what? There's one other problem. We are very expensive as well. People with more than 10, 15 years of experience are very expensive. They're probably the most expensive people in the company.

[07:14:16] And when you're not changing to the needs of today's market, And you are expensive.

[07:14:23] you're gonna be thrown out of the ecosystem. And that has started to happen.

[07:14:28] The clear expectation from leaders, from people with experience, has been, you guys have to lead the AI strategy.

[07:14:36] And you can't lead the AI strategy if you don't understand AI yourself.

[07:14:41] And you can't learn AI yourself by doing some random certification program to understand what AI is, or what an LLM is, that is ***** Stop trying to tick boxes.

[07:14:52] Start getting your hands dirty. Think of the fact that you're back to college.

[07:14:57] And here, you have to reset your learning, all of it.

[07:15:01] You know what? 80-90% of people who have more than 10 years of experience are not gonna take my advice today, and I know that, because you're too resilient to change. We are too proud of what we have done in the past. We are too proud of how we topped our school, the colleges that we went to, the work that we have done over the course of the last 15-20 years. We believe that we are resilient to change, because we believe that we are needed. The reality is that we are not.

[07:15:24] Because the world ***** world order...

[07:15:27] is fundamentally changing. Pardon my French. But the word order is fundamentally changing, guys. We cannot sit ducks and hope that our experience is going to take us through. It will not.

[07:15:41] Put things into action. Start learning. Start executing. If I was a working professional, it doesn't matter the number of years of experience I have, you know there's only one thing that I'll try to do. How the **** do I become the best person in my company with respect to AI?

[07:16:00] How should I become the person to go out there and give my company, give my founder, give my manager a bunch of ideas that we can apply?

[07:16:08] to grow as a company faster. That is what will make you resilient, not your past experience, and let me make that extremely clear. It's going to happen faster than anybody has imagined. People with 10 to 20 years of experience and more. Please take this seriously.

[07:16:24] It's going to be a mess.

[07:16:26] And started to happen in the US. Whatever happens in the US happens in India two years from now, and it will happen here, I guarantee you that.

[07:16:34] It's in your control. Now, people with 3 to 9 years of experience. Here's the thing.

[07:16:38] This is a great time for you guys.

[07:16:41] Just get in... just wear your uncomfortable shoes.

[07:16:45] Get into getting your hands dirty. Start building agents, managing agents, building bycoding products, solving problems inside of your company using AI.

[07:16:55] Be the person that your manager can trust you... trust on when it comes to AI. You'll become invincible and level up to become an AI generalist. That is what I recommend everyone. No matter who you are, the experience that you have, you need to level up as an AI generalist for you to continue to have a job, because I'm going to tell you, there's going to be those 10% or 5% in your team who's gonna just

[07:17:18] you know, just rip over everybody else, because they will build systems, they will build agents, they will build automations, they will build MCPs that will replace your work, and it will happen.

[07:17:31] All I hope is that you guys become that person, and not someone else. Do I make sense? Do I make sense to people who are here, who are listening, who are serious about their careers? Drop in a heart if I'm making sense. This is coming from a founder who's running a 250-people company.

[07:17:47] who has raised VC capital. I'm saying this for a reason. And I've given the exact ***** advice to all my employees as well. And I'm giving that to you. Either you take it, you don't take it, you think that somebody I'm blabbering at this point of time or whatever, it's all on me.

[07:18:03] Now, coming to people who are entrepreneurs.

[07:18:07] a lot of founders out there, and I meet a lot of them. I know people who are running billion-dollar companies. I have access to, you know, even people, like, in companies like OpenAI, in companies like Meta, in companies like Anthropic, in companies like Google, and also a lot of startups all around.

[07:18:24] I know what top people are doing and what top people are not doing. There are a bunch of founders who believe

[07:18:29] That, hey, if AI is gonna come in, fine, I'm gonna just hire a bunch of AI-first people, and they're gonna take care of everything for me.

[07:18:37] I have a question to ask to all those founders, and I ask this openly to anyone who says this.

[07:18:43] If someone is so good, Do you believe they're gonna sit and work for you?

[07:18:48] No, they're not gonna be, bro. They're gonna do their own thing. We are living in an era of building. If a working professional, if an employee under you is so ***** good, they would go and build it themselves.

[07:19:00] Only a close group of employers are gonna sit with you. So, as a founder, you have to be directing the way. You have to be showing the light. You have to be the best person when it comes to AI in your company. And this is a map of future of teams.

[07:19:16] This comes from a Future of Teams, a Future of Work report, where 80% of your employees are going to be AI agents, not humans. Are you ready for this? Because if you're not, your competition will be, and they will kill you, and they'll kick you out of the space.

[07:19:31] Fortune 500 companies are gonna die. Who are we?

[07:19:35] If we are not adopting, we are stalling, we are dying, and we're gonna die before we even realize. So, level up.

[07:19:43] Take execution. You've started. Don't stop right now. Build an AI-first company.

[07:19:48] And you know what? This is an incredible opportunity that is out there. The best AI journalists are people who understand business and understand AI. There are very few people who fall in this bucket. There are very few people who understand business and who also understand AI.

[07:20:03] This, my friends, unlocks a very, very cool opportunity. You know what that is? An opportunity of consulting.

[07:20:13] There are so many companies out there who are looking for people to come and help them.

[07:20:19] who are looking for people like you, who know AI, to come and execute AI systems inside of their companies. These are companies with 150,000, 200, thousand employees. They can't afford a McKinsey, PwC, or a BCG to be able to do this. They're looking for consultants like you.

[07:20:36] Every single week, I will have a founder reaching out to me saying that, Webhub, I need 5 hours of your time, I'm happy to pay you 20 lakhs, 25 lakhs, 50 lakhs a month for 5 hours, 10 hours of your time. You tell me the number, I'll pay you, you help us execute AI in our company like you have.

[07:20:54] And sadly, I'm not able to do that because I have a company to run, and my time is way more valuable than that, but that shows an opportunity.

[07:21:01] And that opportunity is something that I want all of you guys to unlock. So, if you're very good with business and AI, the kind of opportunities that you'll unlock will be insane. I know people making crores, quite literally crores, by doing AI consulting, consulting 5, 6, 10 companies, charging 5 lakhs, 10 lakhs.

[07:21:20] at once, making literally grows using their knowledge, because there's an arbitrage. There are very few people who understand AI, and I really hope you become one of them.

[07:21:31] And guys, I've seen stories which are absolutely mind-blown.

[07:21:35] Like, literally mind-blowing. Stories like people of Deepika.

[07:21:39] who literally was generating 10K per month before, did not know what to do about it, learned her way around AI, learned her way around distribution, become a LinkedIn top voice, generate 2 lakhs of revenue per month from clients across the world, has 35,000 followers today.

[07:21:55] The people like Abhi Manu, who were decently doing their business of 3 lakhs

[07:22:00] of revenue per month, with learning AI and everything around it. Today, Abhi Manu is doing 8-plus lakhs of revenue per month on his business, closing 10 plus high-ticket clients, selling AI services to other people. I told you, the AI consulting is going massive.

[07:22:16] Or someone like Aditi, who switched jobs because she was able to get AI, and she was finally able to move to a large company. Or someone like Vishwam, who was stuck with 60,000 rupees in his bank account.

[07:22:28] today generates, I'm so proud of him, generates 50 lakhs per month in monthly revenue, has a 25-member team, the power of AI and distribution, guys.

[07:22:39] Or someone like Anubha, who has a full-time job and started as consulting, as a freelancer, uses AI and medical content to literally generate 5 lakhs while having a full-time job.

[07:22:50] That is the story of Anubhakaroon.

[07:22:53] Or someone like Shiva, who also has a full-time job.

[07:22:56] and starts doing freelancing, becomes 50% more efficient because of AI, and obviously was able to clock in insane number of clients before that.

[07:23:06] Or someone like Kratika, whose business is literally growing 30% month on month. That's more than 3 times a year growth of her business, thanks to AI and organic growth that she has put into the picture. Or someone like Tania, who jumps into a new job.

[07:23:23] getting a crazy 88% hike, or someone like Kirti, who got, like, a massive 50% hike. I know people who have moved into

[07:23:31] from being a manager to head of AI, I know people who have raised funding after joining... after being part of learning AI, and started a business, and raised... I know a person, I met him, like, a few weeks back in one of the catch-ups. He literally raised 5 crores in funding.

[07:23:49] 5 crores in funding because he learned AI, built a product, showed it to investors, raised funding, left his job doing a startup.

[07:23:59] And I know so many people who have done so many consulting services right now, it's just insane.

[07:24:04] Guys, the opportunity is just wild.

[07:24:08] And that is what I wanted to show you. And it is open for everyone.

[07:24:13] There is more demand than supply.

[07:24:16] It is on us if we are able to tapping on that, or we are not tapping on that. It's truly on us.

[07:24:22] And you know what? I'll tell you the crazy part. Very, very few people realize the power of this. How many of you guys had no idea

[07:24:31] about the power of AI and what you could do with AI before today.

[07:24:36] Drop in a hut. You had no idea AI was this powerful, and then you joined in, you spent literally one day with us, and you saw what this **** thing is capable of.

[07:24:46] Look at that.

[07:24:47] Look at the number of people sitting out. They have no idea about it. No ***** idea about what's happening in the world. They're all sitting using ChatGPT saying, I use AI.

[07:24:58] They're all doing something called as an AI theater.

[07:25:01] But you guys are here learning.

[07:25:04] And I want your learning to continue.

[07:25:07] Guys, I want you guys to go very, very deep into AI. And you know what? By the roadmap that we'll be giving to you, you will be able to do that. After end of, you know, tomorrow, after the whole thing is over, we'll be giving you that roadmap for free.

[07:25:22] You can take that roadmap, learn, go deeper, invest your next 18 months learning AI, and truly become what I call as AI native.

[07:25:32] Become an AI-first problem solver, become an AI orchestrator, become an AI generalist. I can tell you, nobody can stop you from winning.

[07:25:43] Before we wrap up, I wanted to give you one final heads up.

[07:25:47] Is there anyone who wants to get deeper into the world of AI faster than everybody else?

[07:25:54] Drop in a me in the chat.

[07:25:56] Anyone who needs our help to learn AI, go deeper, so that you can... you're not spending those 18 months all by yourself, but we can teach you to get there, not over 18 months, maybe over a few more months.

[07:26:12] I see a... I see, like, flood of people saying me, me, me, me, me, me. Okay, here's the thing, guys.

[07:26:20] We are pretty much done with the day.

[07:26:23] Okay? We have... we have actually spent more time than I thought, because I added a bunch of new things today. Okay? We're pretty much done with the day.

[07:26:30] But, if you're one of those people who are like, bro, I need to know how I can go deeper.

[07:26:37] Can Outskill help me?

[07:26:39] If you want to know how we can help you.

[07:26:43] We have built an incredible program which will help you to become an AI journalist. It is a paid program, obviously.

[07:26:52] And we are doing... like, I can't even explain you how to do this. We are doing an offer that

[07:26:59] you will not be able to believe. This is for only those people who stayed till the end of the call, because we wanted to see who will stay back and will open something really special for them. If you're one of those people who want us to teach you.

[07:27:14] You're open to be doing a paid program, which is going to be insane. It's a global paid program, which is probably the best AI program that you can find on the world, in the world, on the internet.

[07:27:24] I'm gonna talk about that program, give you an offer that you can't refuse over the course of next 20 minutes.

[07:27:31] If you're interested, you can stay back on the call, because I'm only going to talk about the program. If you're not interested, happily drop off from the call.

[07:27:39] chill out, come back tomorrow, learn the day two, take the roadmap, learn it yourself. This next 20 minutes is only for people who want us to teach them.

[07:27:51] who want to know about the program. I will not be teaching anything. For rest of you people, thank you so much for joining in. For all the people who are dropping off from the call, thank you so much for joining. I hope you guys had a great time. I hope you guys learned a lot of things. Feel free to drop off. Make sure you show up tomorrow.

[07:28:08] Because tomorrow, it's going to be wild. And you're gonna go deeper, and you're gonna get the roadmap, only if you are on the call tomorrow.

[07:28:16] I'm making that very clear, okay? For rest of the people.

[07:28:20] I saw about 500 people drop off. I'm hoping a few more people will drop off who are not interested, and I wanted to give you this heads up very openly, because I don't want anyone to feel

[07:28:31] That, hey, you wasted my time. I don't want to waste a single second of my time, brother.

[07:28:36] Happily drop off from the call if you're not interested. This next 20 minutes is for people

[07:28:42] Who want to win faster than everybody else. Who want guidance on top of that. Who want to get there with a community, and want to learn from the best.

[07:28:51] Is that all of the people who are still on the call? Drop in a heart.

[07:28:55] Drop in a heart if that is you, that you want to win in the AI-first world, you want direction from the best people in the world to teach you, you want to do it with a global community, with people from more than 150 countries coming, sitting, learning together, and doing stuff, and building a network.

[07:29:15] You guys are up for a surprise, my friends, because I am super excited to introduce you to the artificial Intelligence Applications for Business Leaders. That is the certified name of the program by NSDC, and it's called the AI Generalist Accelerator Program.

[07:29:33] This program is certified by Skill India and National Skill Development Corporation of India as well, under the name of AI Applications for Business Leaders. In fact, for people who finish this program, they will literally get a certificate from Skill India, and I'll tell you one more thing which is mind-blowing, and that is, because of this partnership, this program is exempt from GST.

[07:29:55] You don't even pay GST for this program, because this program is exempt from GST, because the government realized AI is very, very important. They saw us, they saw what we were doing, and they exempted us from GST by making us part of NSDC. As a result, you don't even have to pay GST for this program. And, on top of that, when you finish the program.

[07:30:15] you will get a certificate from Skill India and NSDC as well, under the name of the program name, AI Applications for Business Leaders, but what we like to call this program as

[07:30:26] is...

[07:30:27] basically the Accelerator program. So, the AI Generalist Accelerator Program is the name that we give it to it, because this program helps you to become an AI generalist

[07:30:39] faster than everybody else. You... it helps you to become a full-stack AI generalist, full-stack AI orchestrator in the fast pace possible. It's the most highest impact program possible, and on top of that, to win.

[07:30:52] And to learn, and to get the most out of this program, you don't have to be a software engineer. You don't have to be a person who knows how to write code. It doesn't matter if you can write code or if you cannot write code. This era, everybody gets a shot to win, and that is how the program is designed.

[07:31:09] So, let me quickly talk about the structure of the program, because this is unlike anything that you have ever seen anywhere, okay? You will know how crazy this is once I talk about the program. I told you, for you to become an AI generalist, you probably have to spend 18 months.

[07:31:26] But we wanted to give you guys an unfair advantage. And we said, how do we make sure we teach you the best of that stuff?

[07:31:34] The top 80% of the stuff in the fastest time possible, so that you get, like, a 2-year heads-up, versus everybody else.

[07:31:42] That's an unfair advantage, time. So, the Part 1 of the AI Accelerator program is 100 plus hours of live learning that happens over 14 days. In 2 weeks.

[07:31:56] You will have 100 plus hours of live teaching, where you'll learn, where you'll execute, where you'll learn 80% of the things that will put you at least 18 months to 2 years ahead of everyone else. If you realize the power of this, drop a wow emoji.

[07:32:14] That is why this program is so incredibly powerful, because this gets you impact as fast as possible, and in the race of AI, it is important. It is important for us to know stuff before everybody else does.

[07:32:27] That's the unfair advantage that we're giving in Part 1. Now, just learning is not enough. We want you guys to be the best. So what did we do? We put together a 48-hour build-a-thon.

[07:32:39] In this build-a-thon, you will compete against people from 150 countries, To do a project.

[07:32:47] With a team of your own, where you're not only learning, you're putting everything that you're learning over 2 weeks into a competition, a global freaking competition, where you'll build what you learned.

[07:33:01] Drop in a heart if you think that is insane. The competition is insane. You can get a chance to learn a lot there. That is part two, guys. Next, I told you, 80% of the things is what we can teach you on live. There are a lot more things.

[07:33:15] But we can't teach you over 14 weeks, so what did we do? We put all of that in form of an AI content library, which is completely recorded, where you guys get access to a bunch of recorded micro-courses, 60 minutes long, bunch of micro-courses, which you can learn at your own pace over the course of next 12 months.

[07:33:32] That is part 3. Part 4 of it is that I truly, truly, truly believe that just knowing AI is not enough, guys.

[07:33:41] understanding, having that business acumen with AI is that perfect mix for you to win. So, while we can't teach you that, we partnered with someone called as Kairos Business School, which is an online school.

- [07:33:53] And we got their content library, the whole ***** curriculum, available for you guys, recorded so that you can watch it over the course of 12 months at any point of time, and pick up your business acumen as well. Business acumen as well. That is part 4 of the program.
- [07:34:07] The part 5 of the program is monetization. How many of you guys agree, drop in a heart if you agree with me, that
- [07:34:14] It is important to translate your skills into dollars.
- [07:34:19] That is what we teach you in monetization. It's a completely recorded library where you can learn how you can translate all your business and AI skills that you've picked up into dollars. That is Monetization Mastery 101. And finally, Part 6, the biggest problem with AI. Guess what that is?
- [07:34:37] The biggest problem with AI is that It changes too fast.
- [07:34:42] Today, There is codex.
