- [00:00:00] Day after tomorrow, there is Gemini Agent. The day next, DeepSeek will take over. The day after that, Anthropic will drop a big update, which will basically crash the stock market. Every week, AI is changing.
- [00:00:14] How do we make sure we're keeping you updated? Every single week, my team will be doing one live session, two, one extra workshop, to make sure you're learning everything that's happening in the world of AI, and stay updated for the next one year.
- [00:00:33] For the next one year, it is our job to keep you updated.
- [00:00:38] For example, literally last week, people learned codecs. The week before, people learned OpenClaw. This week, people are learning, I don't know, I think Hermes Agent.
- [00:00:48] The week before that, people learned how to build managed agents. People are building stuff every single day because AI is evolving, and we want to make sure that you are on the top of everything, so it's our job to keep you updated for the next 54 weeks.
- [00:01:03] That is how the six parts of the program is designed. Guys, the first schedule of the first 14 days.
- [00:01:09] You have two slots that you can pick, because it starts with the 14 days of live madness, like I told you, right? You have two slots that you can pick. You can see both the slots on the screen. There's option number 1, there's option number two. You can pick any of the slots today.
- [00:01:24] As you join the program.
- [00:01:25] you will get literally 20 minutes to join. You can pick any of the slots that you want. And when it comes to timings, for these first 14 days.
- [00:01:33] Monday to Friday, it's 7.30 to 11pm Indian Standard Time, and can I be very, very frank? I'm gonna be very, very frank with this.
- [00:01:42] Monday to Friday, I want you guys to focus on this, I'm turning off everything. Monday to Friday, 7.30pm to 11pm. But here's the thing, it ends up going till 11.30-12 most of the days.
- [00:01:53] So, after 7.30pm, free, be free till midnight, till 12pm. And if you are in US, in the Eastern time zone, it's 10 a.m. to 1.30pm Eastern Standard Time. And on Saturday and Sunday, it's a full day.
- [00:02:09] 10 a.m. to 7pm Indian Standard Time, and we run a parallel cohort in the Eastern Standard Time for people in the US at 10 a.m. to 7pm Eastern Standard Time as well.
- [00:02:19] And also, for whatever reason, if you can't attend one of these sessions, you will have the recordings available for everything, so you don't have to worry. But before I move on, I want to make it very clear, these are the two options that are available right now. And just in case if these two options don't work for you, let's say you can take the 26th June option for now.
- [00:02:39] You can just pay for this option.
- [00:02:41] And let's say towards 26th June, it's not working for you, till, like, two days before... one week before the cohort starts, if you just tell our team that, hey, I can't make it, move me to the future cohort, we will move you to a future cohort as well. So we allow one movement for free.
- [00:02:57] So don't worry about it. So you can book it right now. We only allow one moment for free, so you should... you can join any of the slots. And if you know for a fact you're not available in these two slots, that's fine. You can, let's say, still take the June cohort.

[00:03:10] and write it to our team, we will move you to the future cohort as well. Let's say to the July or the August cohort as well. The dates are not finalized to the future cohorts. That's exactly why I'm not talking about it out there.

[00:03:21] Right? But the timings are these... these are the only timings that we operate at. We don't have any other timings, so don't ask me for other timings, and like I said, recordings are available for every session. And like I told you, if these dates don't work, we'll be happy to defer you to a future batch as well. So, what is that that you're going to learn in the first 7 days of AI training?

[00:03:41] A lot

[00:03:42] One, you'll learn how to build... how to deploy your own AI models on your computer, how to build your own agents on your computer. You'll go deeper into prompting.

[00:03:51] You will learn how to connect to open router to something like a MISTI or, you know, Bolt to be able to play with everything. You remember all the sidebar, wet temperature, presence parity, frequency parity, all those advanced settings? You will learn about all of them. You basically... our job on day one for you is for you guys to become extremely strong with foundations.

[00:04:12] That is what will happen on day one.

[00:04:15] Everything that you saw, and a lot more is what you're gonna learn on day one. On day two, you're gonna learn everything about image, video, and everything around it. What do I mean by that? How do I clone my face? How do I clone my image? How do I clone my video? How do I clone my audio? How do I put all the stuff together? How do I show my YouTube content? Instagram content? The pictures that I spoke about? How did the... how did I show your video, which was done by the learners?

[00:04:38] Everything around it, everything about image, video, audio, is what you're gonna learn on day two, again.

[00:04:45] Bunch of tools you want to explore as well, guys. Day 3!

[00:04:49] is all about MCPs. You saw the power of MCPs, and a lot of people ask, how do I do this myself? That is what we're going to teach you. How to set up an MCP, how to orchestrate it, how to connect it to an AI assistant, how do you write a prompt for it, how do you automate stuff? Everything that you need to know about MCP's Model Context Protocol is what you're going to learn here. You saw how I was able to automate my call, my food delivery, my food ordering.

[00:05:13] my social media, research on Adam Mozari, and a lot more things that I did, I don't remember what all I showed you. You'll learn all of that and a lot more on day 3. On day four, you're gonna learn about automating stuff using a tool, which is incredibly powerful, called as N8N.

[00:05:31] It's a tool where you learn how to automate your Slack, Google Sheets, ChatGPT, and a bunch of other stuff, which is going to be an induction for you to automation, and you can automate anything that you want without writing a single line of code. You don't need to be a developer for this at all, guys. On day 5, you learn how to build your first

[00:05:50] **** voice agent.

[00:05:52] And this is not a simple voice agent. This is a complex **** voice agent. It can have interactions, it can, you know, do things, it can do inbound call, it can take call, it's built on WAPI and retail. We're gonna spend good 4 hours doing this. People absolutely love it.

[00:06:07] That's day 5. On day 6, which is a full day, if you remember, is dedicated for you to learn how to build agents.

[00:06:15] You're gonna learn the agentic frameworks on the first half of the day. On the second half of the day, you're gonna learn how to build your first employee. How many of you guys want to learn how to build your own jerry? Drop in a heart.

[00:06:28] People who want to learn how to build your own jerry, guess what? You're gonna learn how to build your own jerry on day 6.

[00:06:36] Okay? And finally, on Day 7, we're gonna go deep into VIP coding, design thinking, Tech 101.

[00:06:44] So that you get a sense of everything around it, and then you learn how to build products using AI. You just saw a glimpse of that today, the kind of AI graphic designer that I've built, the CRM that I've built, the content OS that I've built, and everything around it. You're gonna learn and build a lot of very cool stuff.

[00:07:01] during this period of time as well. That is day 7.

[00:07:05] So guys, this is everything that you learn over the course of 7 days. And also, a very quick heads up.

[00:07:10] We actually have two different tracks. One is for software engineers who have four to five years of experience in writing code using Python, and for people who don't know how to code. Usually, 70% of our people are people who can't code, so there's a different track for them, which I just spoke about, and there's also a dedicated engineer-specific track, where you learn the same things.

[00:07:33] But with code.

[00:07:34] So it doesn't matter if you're a software engineer or if you're not a software engineer, the batches are separate, and, you know, once you join the program, you'll be put on an onboarding call. We will understand what you are a good fit for, and basis of that, we'll put you in the right program there.

[00:07:50] Okay? That is the engineer-specific track as well. And like I told you, after the first 7 days are done, the next 7 days, we will go deep on these same topics. We'll go deeper into all these topics, but the next 7 days is focused on building.

[00:08:04] You know, first 7 days, you focus a lot on learning. The next 7 days is focused on you building products using AI, right? So you basically

[00:08:14] Convert all the learnings that you've had into doing.

[00:08:19] That is what you do over 7 days, and of course, I told you about the build-a-thon as well. I also spoke about the partnership with Cairo School of Business, where you'll get a content library with recorded courses for first principles thinking, design thinking, problem solving, product sense, consulting, UI, UX, finance, operations. You have access to this for one full year. You can watch it at your own pace. Next, I also told you you're gonna get access to a content library.

[00:08:43] Here, this is again a completely recorded library, available to you for one full year, where you'll learn about all these AI tools and a lot more, go deeper into Manus, Make, Google AI Studio, Zapier, Copilot, GenSpark, and all that good stuff, and also with AI workflows, like AI for data analysis, AI for job applications, AI for research, marketing, product, design, content, and all that good stuff as well.

[00:09:07] Right? And not just that, you have access to this for one full year, so that you can watch it at your own pace. Finally, like I told you, you'll have access to our library for monetization, which you'll have access for 12 months, completely recorded again, where you'll learn how to generate organic sales, how to use LinkedIn AI and automation the right way to make money, how can you cold email using AI and automation, the foundations of consulting.

[00:09:31] meta ads and Google ads as well, in case you want to go deeper into it, because these are all really important skills for you to learn how to monetize your skill set, and we teach you all that good stuff. And finally, like I told you, we help you to stay updated. As a result, we will do a live session every single week.

[00:09:49] Keeping you updated on everything that's happening in the world of AI.

[00:09:53] Guys, this is the structure of the program. Now, there is one thing that I didn't mention.

[00:09:59] as I asked people to drop off from the call, you know what? About 2,000 people have dropped off from the call, and I wanted that to happen, because I wanted people who are really, really serious, who...

[00:10:10] who understand the power of AI, who are serious about their upskilling, to stay on the call. Because if people who are not very serious are on the call, after they see this.

[00:10:19] they might get excited, and I don't want that to happen. As a result, I didn't give this heads up. Folks, I have a huge surprise for everyone.

[00:10:28] A massive surprise for everyone. You see, what I realized is that for you to get the best out of AI, you need to have access to the best AI tools.

[00:10:38] Without AI tools, we are not so much. Of course, Chat, GPT, Gemini, and Cloud at least has some free versions.

[00:10:44] But other tools, they don't even have free versions, you have to pay for everything.

[00:10:48] So, we were like, hey, what can I do to make it better, make it easier, make it softer for all of you people? So, we wore our pads on, the sales hat on, I went to a bunch of these founders.

[00:10:59] Spoke with them, and I said, look, we are the biggest AI education platform in the world, we have learners coming from 150 different countries.

[00:11:08] Can we get access to your platforms?

[00:11:11] In a lot of cases, we had to pay them money. In a lot of cases, we had to convince them. But you know what? If you're joining the AI Accelerator program today, you're gonna get a bunch of

[00:11:22] tool access, Which will unlock you pro access of those tools.

[00:11:29] Because...

[00:11:31] as a... just as a bonus when you join this program. So guys, I'm super excited to tell you guys that everyone who gets the opportunity to join the program today

[00:11:43] will get one year paid access to Emily AI, the same Chrome extension which can summarize

[00:11:51] a web page, summarize a YouTube video, reply on your LinkedIn message and everything around it, worth 20,000 rupees for free. If you think this is the only one.

[00:12:01] You're gonna get 1-year access to SuperGrow. The Super app for LinkedIn, which is incredible if you want to build distribution on LinkedIn, it's worth 30,000 rupees. You don't have to pay for it, because you're gonna get a coupon which will unlock the pro access for one year for me.

[00:12:17] Not just that. With SuperGrow, you can create content on LinkedIn. As a result, you can build a distribution. But let's say you built a bunch of email lists. I strongly recommend people to build their newsletter.

[00:12:29] So that you can send updates to your people. That needs a tool as well. So we partnered with Humanic.

[00:12:35] And they are giving their one-year Humanic AI version, which is an AI-powered email marketing software worth 20,000 rupees for free when you join the program. But that's not it. All of us are busy people. We can't attend every single meeting out there. So we want our AI to attend.

[00:12:52] And getting an AI to attend a meeting is a... expensive thing. So we said, how about we make it nice for you? So you get 6 months access to Fireflies AI, worth 10,000 rupees.

[00:13:04] when you join the program, which is the AI agent that I use, which attends meetings on my behalf, takes notes, and sends all that information to be on my Slack.

[00:13:13] But when it comes to content and everything, I told you, images plays a very important role. Of course, ChatGPT and Gemini and all of these can do a good job, but having a specialized app for images is very, very important. As a result, we got Fortei to give you one-year access of Fortei worth 8,500 rupees for free.

[00:13:32] when you join the program. Not just that, one of my favorite tools, Happenstance AI. The same tool that helps you find network of network, it's going to be an absolutely no-brainer for a lot of you people when you're trying to monetize. It's worth 25,000 rupees. You get Happenstance AI for free when you join the program.

[00:13:52] Not just that, you get GETMULTI BYOK version. Bring your own key version, where you can plug your open router into GetMulti, and start using GetMulti, so that you can compare your answers

[00:14:05] from multiple AIs at once, it's an unfair advantage, worth 16,000 rupees. You get it for free when you join the program.

[00:14:14] Not just that, guys. You guys will also get 1-year access to Lizer AI, the agent building platform, the one that we use today to build a simple agent for the outskilled AI mentor. You can build some incredible agents using Lizer AI. In fact, we teach you

[00:14:30] the Lizer AI platform on the Accelerator program as well. It's worth 20,000 rupees. You get it for free when you join the program.

[00:14:37] Not just that, you also get access to Whisper Flow, the same tool that I was using to convert voice to text. I think it's

[00:14:45] one of our favorite tools out there. It's worth 50,000 rupees. You guys get it for free when you join the program for one full year. Not just that, you guys will get one-year access to numerous AI as well. Your AI co-pilot inside of your Excel to solve

[00:15:04] formula problems for you, so that you never forget about a formula, you'll always remember it, you guys will get 1-year access to numerous as well, worth 10K. We don't stop there, guys.

[00:15:15] You guys will also get one-year access to SuperJoin. Super Join is just incredible. Finally, did we show them Super Join?

[00:15:24] Yes, numerous and super joined, both of them.

[00:15:30] Guys, SuperJoin is insane. This thing doesn't only make formulas for you.

[00:15:35] It literally built dashboards inside of an Excel.

[00:15:38] It can do data analysis, it can do crazy stuff inside of your Google Sheet. It's worth \$25K for one year. You get access to Super Join as well when you join the program. Guys, when you join the program today, we're going to give you a very, very special price.

[00:15:53] But... As a bonus.

[00:15:56] as a bonus, for a very limited time of 20 minutes when you guys join the program today, you get 1-year access to Emily AI, SuperGrow.

[00:16:05] Numerous AI, Fort AI, Humanic, Happenstance, GetMulti, Lizer, Whisper Flow, SuperJoint, and 6 Month Access to Fireflies AI. If you individually buy them, it's worth 2 lakh rupees.

[00:16:19] But you don't have to, because we will give you access to all of the coupon codes. Funny, do you want to talk about how they're going to get access to the coupon codes?

[00:16:30] Yes.

[00:16:31] Yes, upon enrolling, you will get access to a platform, and on that platform, you will be finding coupon codes for each of these tools. So these are individual tools that everybody who enrolls today would get, and the span of the coupon code would be for one year for most of the tools. For Firefly's AI, it is 6 months.

[00:16:51] So there you go, guys. It's going to be your own code that you can apply and use it however the **** you want, okay? But all these coupons are available with one condition.

[00:17:01] And I'm gonna talk about that condition very, very soon. Okay? Now, I told you that I'm gonna do something absolutely mind-blowing today. Was your minds blown, guys? Drop in a heart, or a drop in a wow emoji if your minds were blown, based on what you just saw today, or what you just saw.

[00:17:21] I mean, it is basically impossible for people to pull off something like this.

[00:17:26] And we did that for you people.

[00:17:29] Okay? Now, there's one other thing that I want to talk about, which is going to be even more crazier. I told you that we're gonna make you an offer that you can't refuse. Guys, this is a website. If you join the Accelerator right now, right, it'll cost you about 3.5 lakh rupees.

[00:17:45] That's the price of the program, and if you notice one thing in this, inside of this, we don't give the coupon codes.

[00:17:52] There is no coupon codes inside of this, because we don't offer those coupon codes directly, even on the website, at 3.5 lakh rupees. But that is something very cool that we're doing only for the mastermind attendees.

[00:18:05] Right? But... Today, when you join the program.

[00:18:10] If I stack everything together, you're not gonna be paying 9 lakh, 8 lakh rupees if I put the coupon code elsewhere. You're not even gonna pay 3.5 lakh rupees.

[00:18:21] Today.

[00:18:23] We did something crazy for people who attended Mastermind and stuck till the end. After 10 hours of learning, we wanted to unveil this, so it had to be special.

[00:18:34] Folks, All of you guys get an opportunity to join the AI Accelerator program.

[00:18:41] for 94,999 rupees, or \$1,200. This price is all-inclusive. Like I said, we don't collect GST because we have a partnership with NSTC, National Skill Development Corporation of India. As a result, we don't have to collect GST.

[00:18:58] We're keeping this price special for the next 20 minutes. We're gonna drop a payment link. That's when we're gonna start the timer, because we want people who are sure about it to join in. But to make it easier.

[00:19:08] We have also done a booking amount of 10K. So either you can pay 10,000 rupees to block your seat, or \$249 to block your seat, or you can pay the full amount of 95K as well. You can do any of those, but you'll have 20 minutes time to be able to do this. With that being said, right, with that being said.

[00:19:27] A lot of people might have this question. I'm clearing all these questions so that you can take action as the 20-minute timer turns on, guys. We do offer 3-6 month EMI plans.

[00:19:38] that are available with all selective bunch of options that we have. If you want to avail the EMI, you can pay today by paying 10,000 rupees to block your seat, and for the rest of the amount, you can avail an EMI. My team will get in touch with you, tell you all the options. If you don't need the EMI,

[00:19:55] I generally should not for most of the people, because we have tried to keep it as inexpensive as possible. You can make the full payment as well.

[00:20:02] Now...

[00:20:03] I told you, there are two options, two dates that are already shared right here, that you have on the screen. You can pick up any of the screen, any of the dates that are available. You can pick up any of them. For whatever reason, if these two dates don't work for you.

[00:20:17] You can absolutely... we allow you to move your dates. I understand we can't... you can't predict your calendar for the next 45 days. Just in case something happens and you're not able to join. We will let you move to a future cohort for free. Don't worry about that.

[00:20:31] Finally, as you join the program today, you'll be taken to a one-on-one onboarding call.

[00:20:38] On a one-on-one onboarding call, you'll be given access to all the information that you need. If you want AMI options, that is where the team will guide you, and all the help will be done on a one-on-one call.

[00:20:47] Finally, guys, something that is very, very important. I told you there's going to be one condition, and that condition is to

[00:20:54] Only for people who are blocking their seats by paying 10,000 rupees. If you're blocking your seats by paying 10,000 rupees, you have to pay the rest of the amount in the next 7 days.

[00:21:06] Based on the dates that is mentioned on the screen. Only then we will be able to give you the coupons. If you pay after the date.

[00:21:15] We'll still give you access to everything, but we'll not be able to give you access to the coupons, because these are partnerships, these are things that we don't control, and we can only guarantee you so much.

[00:21:26] So, that is the only condition. If you're paying 10,000 rupees to block your seat, make sure you do the rest of the amount before the date mentioned. You have good 7 days. My team will help you out with the EMI options or anything, if you need for the remaining option. Only if you pay within the time period, you will get access to bonus tools, but if you pay after the time period, we will not be able to give you access to the bonus tools.

[00:21:48] So, with that being said, here's the quick summary, guys. You get 100 hours of live AI training, 48 hours of live build-a-thon, you get the business fellowship content library, AI content library, monetization library, 54 plus live sessions.

[00:22:04] It's just insane how much people are learning in the community, and bonus AI tools, worth 2 lakhs just by itself. All put together is worth 95,000, like, worth, you know, 8 lakh rupees. Just the vouchers that you're getting is worth 2 lakh rupees, guys, if you individually buy them.

[00:22:20] But we have priced it at \$95,000 or \$1,200, so that anybody who's serious about it will put in the work to be able to craft this program.

[00:22:30] With that being said, that being said, funny, why don't we drop the payment link and turn on the 20-minute timer as well? Guys, there you go. The payment link has been dropped. You can see this, you have two options right here. Let's say I want to go with the 26 June one, I just click on that link. I have two options.

[00:22:49] If I'm from India, I'm from international, let's say I'm from India, I select the India link, and here it comes.

[00:22:55] you have a booking amount, or you can pay the full amount as well. Select whichever option you want, make the payment, get inside of it, and you are pretty much good to go. And of course, right, if you're an international user, you will see everything in US dollars. You can see \$249 as a booking amount, or \$1200 as a partial amount as well. You can do \$1,200 as a full amount as well.

[00:23:19] You can pay whichever option that you want.

[00:23:22] With that being said, here is your 20 minutes timer, guys.

[00:23:27] I don't think you will need more than this, quite frankly. We have made it very, very clear. We've told you all the information that there is, so that you can take action. You've spent enough amount of time with us. You also know if AI is going to be impactful for you or not. You also know how much to learn, how much to not learn.

[00:23:45] It depends on you if you want to take action or not today, but you've got 20 minutes, you've got the links, now the ball is on your side. With that being said, there are a few questions. Fani, could you quickly run me through the top 5 questions that frequently comes across?

[00:24:00] And also, I would like to show them our community as well. Because I keep saying global, global, global, and you'll be like, oh, what the ***** global? I see all of them to be from the same region on this call. The reason why all the... all of them are in the same region here on this call is because we run these sessions in four different time zones.

[00:24:18] But when the accelerator happens, everybody does it together. So you'll see the community, and you'll understand how ***** global this is. But before we get there, funny.

[00:24:27] some top questions. I'll pull up the video as well, but one of the common questions that usually comes up is regarding EMI, so just clarifying that once again. You can block your seat by paying 10,000 rupees at this point of time, or \$249, and the remaining amount that you can pay, you can choose EMI options for that. And let us say you are choosing a 6-month EMI plan for whatever reason, you will still go ahead and get the coupon codes beforehand.

[00:24:52] and itself.

[00:24:53] as soon as you get in touch with our team, which is going to happen within 24 hours of you blocking your seat, our team will get in touch with you for a one-on-one onboarding call, and in that, depending on whatever plan you are choosing, once that is confirmed, we'll go ahead and give you the access to the coupon codes as well. The other question that commonly comes up, Webhub, is.

[00:25:13] I am a finance professional, are my use cases going to be taught in the accelerator program? Same for marketers, same for analysts, etc. Guys, anybody out there who has this question, is this program for me? The rubric is very simple.

[00:25:27] Is my work revolves around using a computer?

[00:25:31] and internet. If the answer is yes, this program is for you, as simple as that. Are we gonna teach you AI for finance, AI for marketing, AI for operations, AI for design, AI for software? No, we are not. We expect you guys to be smart enough to learn how to solve problems using AI, and apply those inside of your job. But you know what? You're going to meet a lot of people in the community who are doing the same job that you're doing.

[00:25:54] So you can jam around with them, see how you can solve problems, and that is the power of community. If the expectation is that, hey, you know what, I want to learn AI for marketing, is this the program?

[00:26:05] Well, I will tell you one thing, no program like that is something that you should join as well, because you need to learn the skill set of solving problems using AI. We are learning how to become resilient to AI. For that, you need to be an AI-first problem solver, because today your job is marketing. Tomorrow, it's going to be something else.

[00:26:24] Are you sure that marketing's gonna exist? Are you sure it's gonna exist the way it does? No. You have to be an AI-first problem solver, and that is what we're teaching you. But people have been getting incredible results, no matter what space they are on. So it should not be a problem.

[00:26:40] Yeah. The other question is around the certifications. So, you get two certifications upon completing the whole program. One is from Outskill, and the other one is from NSDC Skill India Certificate is what you're going to be getting.

[00:26:53] Yeah, these are the primary questions that come in WebUp. I've just pulled up the community video as well, should I go ahead and show that? The other question also that comes up... Please, please.

[00:27:04] regarding the timings, I will actually show that to you as I share my screen as well. Currently.

[00:27:10] You know, we operate in the timings that we had shown earlier.

[00:27:15] I will share my screen and show that as well for everybody who has... Okay, funny. Why don't you show them the video and stuff as well? I'll take a quick 5-minute break, and I'll come back, and once I come back, I'll be happy to take some questions as well from people, because I'm pretty sure they'll have a lot of doubts.

[00:27:30] I will drop in a Q&A form as well.

[00:27:32] Sounds cool.

[00:27:34] All right, everyone, just sharing my screen, give me a quick second.

[00:27:39] And there you go.

[00:27:43] Alright, this is the video that I would want all of you to watch, so that you get a sense of how the community works, but before that, quickly showing the timings to all of you once again. This is what the schedule looks like. Monday to Friday, it's going to be 7.30pm to 11.30pm IST, and for people from outside of India, it's going to be 10am to about 2PM EST, and on Saturday and Sunday, it's going to be the full day.

[00:28:07] This is for the first 14 days, and we told you the first 14 days is where all the learnings will be front-loaded, so that you have a lot of time to go ahead and implement everything, right? The other question, as I play the video also that I'll clarify very quickly is, how is the program going to be different from the mastermind?

[00:28:25] Right? Because here, we have thousands of people, tens and thousands of people joining in, and hence, most of what we are able to teach and show is one-sided, but the program is not going to be like that. There's something called as breakout rooms that we do in the program. I will talk more about it after we play the video. So, you will get to basically interact with everybody in the community as well. But let's watch the video, and as you watch the video, I'll also

[00:28:50] drop in a Q&A form on the chat, so that you can go ahead, enroll, or even ask questions.

[00:29:05] We already are in 2026, so I think everyone needs to have some sort of basic AI knowledge.

[00:29:11] The man on the street has actually no idea what AI can do.

[00:29:18] It's been a very positive learning experience for me at the moment. You have to be a very committed person who wants to just completely deep dive into this.

[00:29:26] And make it happen.

[00:29:28] Afterwards, the reward is all yours, because now you have built the skill. What OutSkill had shown as a curriculum resonated so well with me.

[00:29:38] I thought, why not I invest 6 months of my life into this? This was the key to the

[00:29:45] of our brilliant decision money.

[00:29:47] best investments that I have made. And in between, I actually took the mastermind, and I was blown away by it. I was totally pumped. I said, like, I gotta really do this course. It's been tremendous, and this is just the beginning. I'm picking, or at ANC, actually 100% AI.

[00:30:05] This last 6 months have been incredible, very exciting. Every week was something new, and I was like, oh my god, I can't get behind because something else is coming. I would tell them to get a seatbelt and get ready to go for a ride of their life.

[00:30:23] I've been a VP of Marketing in a startup for 18 years. I'm an early adapter of AI. Then this mastermind, the free mastermind session was offered by Video, and then I went there, and then he said, I'm going to launch a program, then I subscribed. And I was able to build a chat GPT in a weekend. Like, I'm not a developer.

[00:30:44] I don't have a computer science degree, and here I am, able to build things. And so I think, for me, that unlocked it.

[00:30:57] This was gonna be the future.

[00:30:59] And I'm glad that I did. It felt that they cared about us, and that they really wanted us to succeed. We really accelerate in AI, so I've, I've been looking all

[00:31:10] the internet, I came to cross paths without scale. It really adds value, it's very practical. You get hands-on experience on what you have to do, which helps you, really become relevant, in particular when you operate in spaces like mine.

[00:31:31] But there's a great volume of information that you get taught as a student. It made me very interested in creating those agentic AIs and

[00:31:40] making those custom agents. Obviously, as the days go on, the content becomes a little bit more technical, a little bit more intense.

[00:31:49] Whether you are getting into creating your own apps, whether you're a marketing person, whether you're a content creator... Yeah, so for me.

[00:31:56] Just...

[00:31:57] The vast amount of knowledge that I was able to learn in such a short period of time, like, you know, some may say, well, 6 months, that's a long time.

[00:32:05] When you're doing this just on weekends, and you've got a full-time job, You know, just...

[00:32:11] You know, the breadth of the material that was presented, I found, you know, very helpful. I've been working for 20 years as a data scientist, and lately I've been developing apps.

[00:32:23] It's always stressful when you have to, yeah, to bring what you have done for so many nights. Yeah.

[00:32:31] But this is a great experience to be...

[00:32:39] to share and showcase. Extremely intense, and you really need to be on the ground and do the things, but when you do it, then it's just, tremendous what you can learn, and you can really see how you're growing. I think the experience, without skill has been, pretty amazing, in the sense that, you know, I joined

[00:32:57] When I had very limited knowledge of the different platforms that were available in the market today. The highlight was when they went into automation and started showing us the products like N8N and everything around that. I think that was, for me, that really resonated, and for me, it was really exciting.

[00:33:14] more confident than when I started. Our skill really, really forces you to do your best within the shortest period possible. I'm not only helping with my career, but also in my, you know, everyday civilian life. I think getting to the actual heart of real problems.

[00:33:31] I...

[00:33:32] knew about AI, and I can truly say today that I am an AI generalist. It pushed me to the limits. I believe that, now AI can give everyone a chance. With this program, AI generalist, everyone have the same chance to become a star.

[00:33:51] No, we're not looking to change, hand on the wheel.

[00:34:08] Out of 10? You're 8. 10 out of it? Yeah, I'd give it a 9. Or 9? 11.

[00:34:12] Bro! Oh, lovely!

[00:34:14] I already recommended it to some friends. You know, you asked me about if a friend reached out. Like, if a friend reached out, they might ask, like, oh, where did you learn your thing? And I'm like, I go to elsecale.com, find the link, and I just send it off to them. 9.8, 9.9. A 9 to 10. It's 10. Definitely 10 on 10. Well, I would just have to say, boom.

[00:34:34] When I'm on dry, never lose control!

[00:34:36] So that was to give everyone a quick sense of how the community functions. Like you saw, it's a global community, and most of the people inside of it are people who have more than 10, 12 years of work experience. Those are the kind of people, you know, who benefit from the entire program and the community as well. One thing that I was mentioning, you know, as people are enrolling and I see that, I will call out the names as well.

[00:35:01] towards the end. I also see questions coming in, but something that I was mentioning before playing the video was how the program is different from the mastermind.

[00:35:10] You see, over the 14 days, after every session that gets over, let's say Monday you're learning about how to run local LLMs. Towards the end of the session, we split people into breakout rooms so that 30 to 40 people get a chance to interact with one specific mentor, right? So that is where you get very hands-on. You actually go ahead and try to install LLM models locally on day one and

[00:35:35] And any questions that you might have, you might go ahead and ask a mentor, or even see what the community is doing. And this goes on for 14 days, so you're learning, and you're getting that hands-on practice as well, every single day. Because as you're getting started on your journey of learning AI, we know how important it is to be able to answer specific questions of yours as well, which happens in the program. Here in the Mastermind, because of the sheer

[00:35:59] scale. We can't, of course, allow people to turn their cameras on or even ask questions, but that is not the case in the accelerator program. So I hope that clarity comes through for everyone.

[00:36:10] I see a lot of questions coming in, and also enrollments happening. In case anybody has the issue of payments failing, the enrollment link at this point of time might be seeing a lot of traffic, so please refresh, and it should work out fine for you, right?

[00:36:28] All right, and as WebHub comes in, we will start taking the questions as well.

[00:36:35] Hello, hello, hello. Okay, I just thought I should show something, to a few people. So, funny, can I take over the screen?

[00:36:43] Yes, you can.

[00:36:45] So, folks, I'm pretty sure that a lot of people have these questions, right? How is that gonna work? Are people gonna learn? You saw the video that gave you a glimpse of how global the community is. It's...

[00:36:56] You know, it's nothing like anything that you can see anywhere in the world, quite frankly. At this point of time, it's the largest AI community in the world at this point of time, so that's an unfair advantage to start with. But again, I want you... I know all of you guys are not just joining in for the community, you guys are joining in to learn.

[00:37:13] But before I talk about a learning part of it, I just wanted to drop a couple of sense about the community, right?

[00:37:20] Just imagine this, guys. In the world that we're heading towards, which is AI,

[00:37:25] One of the most valuable assets is going to be your human network.

[00:37:29] Right? And that is what we're gonna try and double-click on. And your human network cannot be confined to the country, to the city that you are in and everything. It has to be truly global, because all of us, whatever we are doing, is going to be truly global.

[00:37:43] And we are making a massive, massive attempt to make sure that we build the largest AI global community. It has to be so ***** powerful, and to be very frank, it's still a work in progress. We are working towards it, right? Where...

[00:37:57] If you end up walking into any country in this world, you should have OutSkill alumni to welcome you, have your own friends to say hi to, no matter which country you're flying into.

[00:38:08] Let's say you build a solution on country A. You should be able to put that into 25 other countries by just connecting to people in your network. That is the alumni network that we are building in. A Harvard, a Stanford, and all these colleges are valuable because of the alumni network they have, because they're truly, truly global.

[00:38:25] And we are inching towards that, where how do we build a community for you people, that you get access to people anywhere in the world?

[00:38:34] Right? And are similar to you, think like you.

[00:38:38] And I know not everybody will understand the power of this. People who are just into college and stuff will probably not understand the power of network right now. So for all the people who are experienced on this call.

[00:38:50] Don't you think that'll be insane? Drop in a heart. A community, an access of people, like-minded, with experience, global.

[00:38:57] That is what we are building here.

[00:39:02] Right? That is one thing that I wanted to say. And the other thing that I wanted to quickly show you guys is this, right? This is our internal Slack, guys. You can see the AI Accelerator channel. This is something that my team drops every single day when an accelerator is happening.

[00:39:18] There are... there's a 74-member team. This is one more unfair advantage that we have. We have a 70-member team whose job is to learn, experiment.

[00:39:27] train and build playbooks of AI. That is exactly why we're probably only people in the world who are able to pull off education of this standard in a place like AI, which is evolving every ***** day.

[00:39:42] We have a research team whose job is just this. Sit, learn, teach, execute. Are you able to understand the power of that?

[00:39:50] That is what is happening, and you see this right here happening, right? This is day one of the last cohort that started. Look at the CSAT. 4.54, 4.53. But the breakout room, which Funny spoke about, where people interact with each other and build stuff, was only rated 4.07. I don't have to hide anything.

[00:40:10] Now, on Day 2,

[00:40:12] That changed, again, right? On day 2, people learned image-video manipulation, like you can see. It was rated 4.54, 4.52, and the average CSAT of 4.53, with a breakout room average of 4.51.

[00:40:27] Now, as I move on to Day 3, and you can see, this is for internal, so all the key observations, what people said, what people did not say, what people liked, what people did not like, is something that we capture on a daily level, so that the quality of education is the highest.

[00:40:41] anywhere across, right? This is day 3, you can see this. This is Introduction to Automation with N10.

[00:40:48] 4.56. And the breakout room, which was 4.07 on day one, went to 4.58.

[00:40:55] I'll keep going on, guys. Day 4. 4.71 out of 5. 4.63 for breakout activity.

[00:41:03] This is day 5. 4.83 out of 5. It goes on, 4.78 out of 5. You can see this, 4.7 out of 5. And there are people dropping these messages as well inside, right? These are screenshots.

[00:41:19] really interactive, interested to build an app, absolutely a session worth the wait, complex concepts of voice agents are being broken down and whatnot, right? You're getting all these sweet messages coming in from people as well. It goes on, guys, day 6, 4.87. So.

[00:41:34] What I'm trying to show you is this is not your usual stuff. The way we operate is not regular. The standards that we hold ourselves accountable to is extremely, extremely high.

[00:41:46] Right? We do things with a very pure intent of making sure that we can truly level people up, and there's a reason why we priced it expensive. I know this is still a price which will be expensive for a lot of people, but there's a reason for that. Because we only want people who are **** serious.

[00:42:03] to come in, and when they come in, they give that 100%. Because in the end.

[00:42:07] We want people who are not just investing their money, but also investing their time, because that is the only way to get outcomes. With that being said, I'm sure there are a lot of questions. Okay, I see a lot of questions, so let me jump right inside of those questions right now.

[00:42:24] Okay.

[00:42:26] Webhav, we... we... we still have to answer questions, but the 20-minute timer is out, and I still see enrollments coming in. Can I just quickly launch a poll to see if everybody is able to go ahead and enroll in case they want to? Go for it, go for it.

[00:42:44] Go for it. I'm skimming through, I see 180 questions, Juan. It's gonna take me some time to take them.

[00:42:51] Go for it, drop the pool.

[00:42:53] Okay. Folks, I've just launched a poll, just checking how many people are still in the process, or if anyone is facing any payment issues.

[00:43:05] So, meanwhile, funny, I'm gonna... there is no way in **** I... it has gone to 200 questions right now. There's no way in **** I'll be able to answer these questions. So, I'm gonna get to, AI to help me out, meanwhile.

[00:43:19] You can take a couple of questions, if you can, quickly, that you can see on top. I'm just getting AI to help me out here.

[00:43:27] Yes.

[00:43:32] Okay, what is the EMI process? The EMI process is something that our team will be able to help you with on a one-on-one call during the onboarding, so you just have to make the initial booking amount right now, and the remaining can be converted into an EMI as well, right? And we support most of the key banks. More details will be shared, you know, when the onboarding

[00:43:57] onboarding call sort of happens.

[00:44:00] And someone's asking, whether you can activate the tools later. You can, of course, activate the tools whenever you feel like after you get the coupon codes, but we would still recommend everyone to activate them as quickly as possible.

[00:44:15] How can you access the transcript? We will not... we will be sharing the Outskill AI Mentor that we have built out to all the people who are completing the whole mastermind, but not the transcript directly.

[00:44:26] A lot of people are asking whether you can access the same offer much later, which will not be possible, because this time we came up with this special offer of reducing the price, but usually we don't do that. So, anybody who is not able to enroll today, you could probably enroll from the website of ours.

[00:44:50] Okay...

[00:44:55] what level will we get to after the 14 days? Well, basically, you are going to be learning all of the 5 levels that Weber went ahead and showed, right? So, in the accelerator program, what we essentially do is, we make people consistently learn and build for 14 entire days, so that it becomes more of a habit.

[00:45:14] and you're also learning all of the five levels that we spoke about, right? So, the level of skill evolves beyond of the 14 days as well. So, it's not that after the 14 days, the program gets done. After the 14 days, you continue to practice, you continue to build solutions, you attend the weekly live sessions that would be happening every week

[00:45:34] one live session is something that you should certainly attend, but we conduct beyond of that as well, because for everybody who's a part of this community, there are a bunch of initiatives that we have not even spoken about, right? They get, like, you get invited to special workshops and sessions, let's say a tool has dropped, we go ahead and try that tool out all by ourselves, and then we go ahead and conduct a workshop for all of our

[00:45:59] learners on that. So these sessions would continue to happen for the next one year, and in these sessions itself, you can come back and ask questions as well.

[00:46:07] The free roadmap is something that we will be sharing towards the end of tomorrow, so in case there's anyone who's just waiting for the roadmap, we are going to be sharing it with the people who are completing the whole mastermind as well.

[00:46:21] All right, funny. So, I got the questions, summarized, so I'm gonna quickly address them. The biggest question is on EMI scholarship discounts and payment deadline. Look, one question that I saw, there are a bunch of questions around that. So, here's the thing, guys,

[00:46:37] you have your, you know, two payments that are... you can block your payment by paying 10K, or you can pay the full amount right now as well. There are two options that you have. If you want EMI,

[00:46:48] then you basically have to pay the 10,000 rupees right now to block your seat, and can pay the rest of the amount using EMI as well, over the course of 6 months, right? And one question that comes in is, if I'm in EMI, will I still get access to the coupon? So do you want to answer that, Fani?

[00:47:05] Yes, like... like I mentioned earlier as well, during the period of your EMI... I mean, you don't have to wait for your EMI period to essentially get done. You take a 3-month EMI plan or a 6-month EMI plan, but you get all of the coupon codes as soon as you take that EMI plan initially, right? Which is when the conversation with our team would be happening. So, in the next 7 days itself, you will get your coupon codes, and the reason why we want to do that

[00:47:28] is also because we would want you to go ahead and activate your plans. Some of the tools we also teach in the program, so you should be having access to them.

[00:47:37] Guys, one more thing that I want to make it very clear is that, look.

[00:47:42] I'm not a fan of VMI, quite frankly, because I don't want people to add debt to their lives to be able to do this. So, please don't join the program.

[00:47:51] by taking financial stress that you can't handle, because you can learn everything all by yourself as well using the roadmap. This program is great for people who can afford it and can get there faster. The way the program is designed is for you guys to learn

[00:48:06] and move fast, right? But that doesn't mean... let's say there are a lot of people who have said funny that they don't have jobs. They're students. Guys, if you don't have a job, if you're a student, you know you have one thing.

[00:48:17] You probably don't have money, and you should not join the program either, but you have one thing, that is time.

[00:48:23] I told you it will take 18 months when you... or 18 to 20 months, when you spend 10 hours a week. You're jobless. You're looking for a job, or you're a student. Spend 50 hours a week. Learn everything in the next 3-4 months.

[00:48:37] There is nothing with respect to information that is not available on the internet. If anybody tells you that they're gonna teach you something that is not on the internet, that is a lie.

[00:48:49] That's not possible. Everything is on the internet. That's why we build the roadmap, so that everybody can actually learn.

[00:48:57] Irrespective, or if they can pay, doesn't matter, right? Of course, there could be nuance, there could be experiences that is personal to anecdotal to the mentors. That we can't do much about.

[00:49:09] Right? But I truly believe everybody can learn things themselves. So, if you are a student.

[00:49:15] If you are, don't have a job, right, it is not needed for you to take the program.

[00:49:22] The last thing that we want is for you to add financial stress that you cannot control. Want to make that very, very clear.

[00:49:29] We are here to teach, we are here to enable. I'll tell you one more thing. For all the people who are joining the program, you guys are enablers for literally hundreds of thousands of people, because you might have realized that, you know, I'll give you a stat that will blow your mind.

[00:49:46] Only 0.5% of people who learn from Outskill B.

[00:49:52] 99.5% of people learn for free.

[00:49:56] And that's fine. We are very happy about it. That is how education should be.

[00:50:02] So we are able to make that happen.

[00:50:05] Purely because of a few people who are willing to take the trust, who have the money, who can afford, who don't have the time, who come join our programs. They enable us to be able to teach everybody else. So, first of all, thank you.

[00:50:18] For all the people who have managed to join in as well. Funny's gonna take their names towards the end as well. But sadly, guys, I'm really sorry to say this, we don't do discounting.

[00:50:28] We don't do any further discounting beyond this. This is the best that we can do. If you're not able to join in, please don't, like, don't take stress on that. I'm sure you can learn it yourselves.

[00:50:40] Yup.

[00:50:41] Weber, just wanted to clarify two things before you take the next question. One is, a lot of people on the poll mentioned that you have questions and you would like to speak to someone, so I just...

[00:50:51] had our team be available on a number. I've dropped that number on the chat, you could go ahead and call up. And, I also, you know, saw this question about whether this program comes with any job guarantee, and I would like to clarify there is no job guarantee or anything for this program. The intent for us to do this program is to help people learn.

[00:51:13] Have people gotten outcomes? Yes, but we don't guarantee outcomes, because it purely depends on execution. Purely on execution after, you know, you complete the program.

[00:51:24] So, few people have noted about payments being not going through for their credit cards, debit cards, showing errors or whatever. Guys, you can keep trying. That is one. The second thing that I want to address is basically

[00:51:37] You know, someone has asked, can we get a refund if we don't like it? Guys, we've been...

[00:51:42] scammed like crazy in the past, so we made it very, very clear. We're very, very sure about the program that we have built in. If you're not sure for whatever reason, don't join the program. We will not be issuing any refunds. If you're not sure, just don't join the program. We give you the roadmap, learn it yourselves, that's absolutely fine.

[00:51:58] If you have the trust, if you think that it is valuable, you saw the ratings of them, of people that have posted, it's on our Slack, you saw the video, if these are not enough for you guys.

[00:52:09] 10.

[00:52:11] can't do much about it, right? So that is what it is. Funny. Let's wrap this up in the next, 10 minutes, because I have last few questions. We have gone longer, but let's keep the link on till the session is over.

[00:52:23] So people who want to join, I saw the... I saw the polls. Let's keep that on, not put any timers, let people come in if they want to, because there's just too many questions, I want to address them.

[00:52:32] Right? After that is done, we will close it, end of the call.

[00:52:37] Okay.

[00:52:41] I've joined the AI bootcamp, can it be moved to Accelerator? Yes, you can. If you've joined the bootcamp and you want to move to the Accelerator, you absolutely can. You can write us an email. Funny has dropped that email, you can move to that. In fact, if you're part of fellowship, you want to move here. If you are accelerator, want to move elsewhere, yes, you can make all those adjustments, not a problem.

[00:53:01] What is the difference between fellowship and accelerator? Afani, maybe we should talk about fellowship tomorrow, if you can. I will do that, yes. And we'll also give the option to move from Accelerator Fellowship if anybody wants it.

[00:53:13] Alright, so...

[00:53:14] Yeah. Guys, fellowship is a much longer program, but funny, we'll talk about that tomorrow. We did the accelerator because people wanted to get learnings faster, right? And fellowship is also an application-led program. We only select 150 people per quarter for that program, so yeah.

[00:53:35] Okay... Timings has been a big problem. People from Australia, Singapore, UAE,

[00:53:42] afternoon, evening ***** founders, parents, working professionals. I understand, guys, this is a very common problem that we come across, where a lot of people say, the timings don't work, what can we do? Fanik, do you want to put that timing on the screen once?

[00:53:54] We totally understand, but sadly.

[00:53:57] We can't do much, because this is the only time zone that we are running the program right now. Tomorrow, if there's a new time zone that we end up opening, I will... we will let you know. We will allow you to move there as well. But we right now operate on IST and EST only, because that is where 80% of the people are able to fit in.

[00:54:15] Right?

[00:54:17] And also, funny, a lot of people are asking about the timings, what are they going to learn. The same questions are repeating over and over again. So right after I wrap up, it would be great if you can run them through the whole structure of the program, dates and times and everything around it as well. But guys, one thing is that

[00:54:32] There's a reason why we give you recordings. The reason why we give you recordings is purely this, so that just in case if you're not able to join in, you get access to the recordings where you can watch.

[00:54:42] Funny, can you pull the dates and time zones on this call?

[00:54:47] Is this program, for me is a big question. Students, the program is not for you.

[00:54:52] The reason is very simple. You can learn everything yourself. Don't waste money of your parents. Invest that time, play less of Call of Duty, play less of... watch less of Korean Pop Show.

[00:55:05] And, spend more time learning, I guess. It's fun. Trust me, it is fun, right? It almost feels like fun. It almost feels like Netflix. I give up Netflix every single day to explore AI.

[00:55:16] Right? Use your time to learn. That's what I would tell you. You don't need a paid program for that. And you attended this mastermind anyways, right? We do little things like this all the time. Attend those. Jugad Karo. That's what I would say.

[00:55:31] For people who are non-tech,

[00:55:34] Essentially, it doesn't matter, guys, if you're experienced or not expe... I mean, it doesn't matter if you're tech or non-tech. Like ***** told you, we have two different tracks, one for engineers, one for non-engineers. After you join the program, we will... we will do a one-on-one interview with you, and put you in the right bucket accordingly, so you don't have to worry.

[00:55:52] Okay? So it doesn't matter if you don't have any coding experience or anything, it should be absolutely fine.

[00:55:58] I'm a homemaker after 15 years, will I... yeah, go on.

[00:56:02] No, no, I was just saying, in case anybody wants to join the tech track, or the technical track of it, if you are an engineer, and that is the track that you want to go ahead and take, you can still go ahead and block your seat, and our team will move you into that track completely.

[00:56:15] Correct, correct. It's the same link to join. We will assign you based on our understanding of who you are and what you can do.

[00:56:23] Right? So, yeah. I'm a homemaker, after 15 years of experience, will I be able to learn? Yes, should not be a problem, as long as you know how to use tech.

[00:56:41] Okay...

[00:56:42] Career outcomes, job guarantees, like I said, guys, this is not a program for you to get a job guarantee. That's not how the program is designed. So, yeah.

[00:56:52] But, like Fani already mentioned, that there are a lot of outcomes that people have got, but we are not taking the headache of getting you guys a job. That's not what we do. We teach you AI. If you execute, you do stuff, you will be able to win, and we're sure of that.

[00:57:08] Curriculum, projects, and learning experiences, will the course be one-way lectures or hands-on? Fanid, do you want to answer that?

[00:57:16] Yeah, so the... while the session is happening, we would want everybody to focus on the session, but right after the session, we get into Q&A, and right after the Q&A, we get into breakout rooms, so that... and every day, there is a workbook, by the way, that you get, and using that workbook in the breakout room, you...

[00:57:33] basically practice, and you build on top of what you have learned. So, it's going to be extremely hands-on, that is what we believe in as well.

[00:57:43] Awesome. Yeah.

[00:57:45] Go on, go on.

[00:57:47] No, no, I think that's pretty much it.

[00:57:50] About... Okay. Funny, I will...

[00:57:54] I have, like, 10 minutes before the next call, so I will have to bounce off.

[00:57:59] Right? But I've sent you all the questions that I could come across, in the Slack. Funny, you guys, guys, you guys are in good hands.

[00:58:08] Funny will be able to help you out to answer all the questions. I have, like, a call in 10 minutes, and I want to, like, quickly freshen up, take a break. It's an important call for me, right? But, there are a bunch of more questions, ***** like, almost, like, 25 bucketed questions still in there. I want those questions to be answered,

[00:58:25] I thought I'll be able to wrap it up faster, but I don't think I will be able to. But folks, for everyone who's still on the call, thank you so much for taking the time out. I hope you guys learned a ton. I hope you guys got perspective, which is even more important, according to me, so that you can go deeper and do things. In the end.

[00:58:45] You know, we are very proud when we know that our learner has done well. Doesn't matter how they've come, doesn't matter if they've taken a program, doesn't matter any of it. The impact is what we do all of this for, guys.

[00:58:57] So, we wish you all a good luck. Thank you, everyone, for people who have managed to join in the program. Thank you for allowing us to run the show, and yeah, I hope to see you guys tomorrow as well, in the session. Fani, over to you for people, for those questions that you want to take in as well.

[00:59:13] But, perfect. See you guys. Bye.

[00:59:18] Okay, so folks, I'll go ahead and answer the remaining questions that have come up on the form, and before I take up questions, I'll also drop in the resource file on the chat so that everybody has access to the drive link once again. Resources from Session 2 of WebHub has also been uploaded, and we have also gone ahead and put up workbooks that all of you can go

[00:59:42] go ahead and practice on. Tomorrow, we get started at exactly 10am IST for day 2 of the Mastermind, and a lot of you were asking, can you teach us how to build,

[00:59:53] products, can you teach us how to deploy and everything around it? Can you teach us how to, you know, generate ads or movies with AI? So tomorrow is going to be all about that, right? We are going to go into the advanced levels, we're going to be learning how image and video generation works, we are also going to be teaching you wipe coding, which is

[01:00:13] From scratch, ideation.

[01:00:16] and then building a product. We are going to be doing that live tomorrow, so it's going to be insanely valuable.

[01:00:23] from 10am to 7pm IST, just wanted to tell you that as well. How many of you are excited for Day 2? And no, you don't have to be part of the accelerator program to join for Day 2. Day 2 is for everybody, right? The learning goes on, irrespective of whether you're joining the program or not. But just quickly taking the questions, and after I take the questions, I will give you a rundown of the program, and then I'll also call out the names of the people, right?

[01:00:48] But everything that you need is on the chat box already.

[01:00:52] I think job opportunities, we have already spoken about it. I know people from the program who, without, you know, completing the entire program itself, have been able to get into consulting. You know, it's just...

[01:01:06] the fact that the demand is so high, the supply is so low, that when you even speak about learning AI at this point of time, you will end up getting a lot of inbound queries.

[01:01:18] People who have gone ahead and made a post about this mastermind itself that you're learning for 16 hours, you would see the kind of inbound requests that you might be getting, in case you're smart about it as well, right?

[01:01:30] I know people who, without completing the 14 days itself, have gone into either consulting, somebody called me up recently, this was a conversation from 3 days back, wherein, the person has been a homemaker all throughout, did the program,

[01:01:44] you know, was on the 10th day or something like that, she was talking to somebody who works in a different company altogether, and they requested her that, hey, seems like you know so much about AI already, why don't you... could you come and take a training program for the entire team of ours? And it was supposed to be pro bono, or at least that is what she thought, because she didn't go into the training with the intent of making money, but the company actually paid

[01:02:09] her for a 3-hour session that she ended up taking, right? So, a lot of opportunities come in today for people who are learning GenAI. Again, reiterating that we don't guarantee jobs, we don't guarantee consulting opportunities or anything around it. It all depends on how well you are able to execute. And the idea that we drive the entire community with is

[01:02:32] you will find people who are very enthusiastic, energetic with you. While they are going ahead and applying, you will, you know, have that FOMO that you are not applying in case you're not, right? The community, in fact, motivates me as well today. Every morning I wake up, there are so many messages and discussions happening, because it's a global community, so while people in India are sleeping, people abroad are awake, and their discussions are going on. So it's just...

[01:02:57] brilliant to see such active people applying things on the go, right? And that is what will sort of help you. I think this

[01:03:06] Gives you clarity about the outcomes. Don't want to speak too much about the outcomes.

[01:03:12] right now. Will we be... will we build YouTube automation from script to upload? Yes, you can build that. We are going to be teaching you how building automations as a process works, and then you will be able to go ahead and apply it to your own use cases as well. Can we build portfolio websites using AI? Yes, of course.

[01:03:32] Can finance students use white coding? Yes, yes, yes, all of that is a yes.

[01:03:37] Can we do this? Can we do that? It's all... always a yes.

[01:03:42] What is the total duration? It's a one-year-long program. 14 days is the first part of the program where we essentially front-load the learnings.

[01:03:51] tools, subscription, usage limits... well, of course, even though we are giving coupons, these are of the pro plans of the tools, right? And let me quickly show the tools as well, so that you have, you know, that clarity also. You get pro plans of all of these tools.

[01:04:08] Are there usage limits? The usage limits are similar to whatever the tool is offering on their pro plan.

[01:04:14] you will not get unlimited usage anywhere, right? Even if you are going ahead and purchasing the pro plan of the tool, you're not going to be getting unlimited usage of it. Everything is credit-based or token-based in the AI world, so you need to

[01:04:29] be within those token limits, but for all of these tools, the tokens that they give for a one-year pro plan are very, very, you know, I mean, you get a lot of tokens, basically, so you will not run out of tokens as long as you're using the tool in the right way. If you're not using the tool in the right way, then yes, you might run out of tokens, but we'll teach you how to use these tools in the right way as well, so that you can

[01:04:53] Save tokens. Do you need to buy Claude, ChatGPT Pro, etc? It's not required, because all the LLMs, ChatGPT, Gemini, Claude, etc.

[01:05:02] These, you know, if you want to use the web interfaces of them, they work on the free plans as well.

[01:05:09] We are going to also teach you the day one of the program starts with you installing AI models locally and connecting to the Open Router API key, which allows you to have access

[01:05:19] to many, many models, and there are many free models available as well that are incredibly powerful, right? Like, DeepSeek is so powerful, the reasoning of DeepSeek is

[01:05:30] so good. Quen is another model that is incredibly powerful. All of these are used for free, right? And when you're building a product, let's say, and you want to connect that product to an LLM,

[01:05:44] using something called as an API key, we're going to be talking about API keys tomorrow, and you will understand. It's basically having your automation or product use the power of AI as well. In such cases, we teach you using free AI models so that you don't have to end up paying.

[01:06:05] What is the hardware or laptop configuration that you would need? You don't need any specific laptop configuration to attend the program and even build solutions. Because all of the tools that we went ahead and saw, these are all tools available on the web.

[01:06:19] Unless you want to run multiple AI models locally and run your computer 24-7, that is when you would need a higher GPU and higher RAM. Maybe a 16GB RAM or something like that would be

[01:06:33] You know, required for that. And yes, if you're on a M4 chip, that is perfect.

[01:06:43] But for learning purposes, and for running all of these solutions on the internet, you don't need any specific configuration at all.

[01:06:52] certification, I think I've already spoken about it. Every learning... everything... every session is going to be virtual and online. Everybody joins in from all across the world. There are two offline events that we conduct.

[01:07:06] for our entire community, 2 offline events per year, once in 6 months, and that is the video that you ended up seeing, right? And this was...

[01:07:14] When we conducted it previously, we had conducted it at Google's HQ. So, you know, by now you would have gotten the understanding that we are actually partnered with some of the giants, and the reason why we have been able to crack this sort of partnership with all of these tools as well that you see is because of how many learners we are able to impact at this point of time.

[01:07:37] And also because we are the largest education... Gen AI education platforms out there at this point of time. So, those kind of collapses is what you will keep seeing as you join the community.

[01:07:53] All the logistics around how... if you have already enrolled, you will get the session links and all of that from our team.

[01:08:00] there is going to be a one-on-one onboarding call, and we are very bullish about the one-on-one onboarding call as well, so please do block that one-on-one onboarding call if you have already enrolled. You will get a Calendly link over your email. You just have to click on that Calendly link and block a slot. Till you block a slot, our team is going to be behind you, because

[01:08:19] In that call

[01:08:20] We are going to check whether you have gotten the complete access. We are also going to check and help you understand how to apply the coupon codes also, because there are about 12 plus tools that you're getting access to. So, we will walk you through the entire process of applying the coupon codes, right? So, block the onboarding call.

[01:08:39] I see a lot of people

[01:08:42] I think all of the rest of the questions are about whether we can hold this offer for tomorrow. We will not be able to hold this offer for tomorrow, but I quickly, as Vibe was answering the questions, I created a form in case anybody

[01:08:55] could not block their seat today for whatever reason, and you want an extension, I would request you to fill this form out. I can't guarantee anything at this point of time, but

[01:09:06] fill out this form, and we will see what we can do. But we were supposed to open the offer, the special offer, only for 20 minutes, right? And just to give everybody a rundown

[01:09:18] Of the entire program, for those of you who have had questions around it.

[01:09:22] The accelerator program is a 1-year-long program, which has 6 different parts to it, right? Part 1 is a 14-day long sprint.

[01:09:30] Where we essentially fast-forward or front-load all of the learnings. And why do we do this? Even though it is intense and gets exhaustive? It is because it is something that working professionals, consultants, and entrepreneurs have asked from us.

[01:09:45] Why? Because imagine learning all of this over one year in a very spaced-out manner. The problem is, we don't have that much time. As you learn, things will keep evolving. So how do you always stay on top of

[01:10:00] what is happening in the AI world by learning everything that needs to be learned fast, and then keeping yourself updated. Now, that does not mean that the support will go away after 14 days, because the support will continue for one entire year. So, most of our learners, while they build to learn during the program.

[01:10:19] Of 14 days.

[01:10:20] They continue to implement solutions inside their organization after the 14 days are done. And as part of the remaining parts of the program, you have an AI content library, you have a content library with business foundations, and you have a content library with monetization content, right? Things that'll help you expand your reach, reach out to more people using cold email strategies, everything that'll help you monetize

[01:10:45] the skills that you're gaining. Right? So, and what exactly will you be learning over the 14 days? The first 7 days, you basically go from

[01:10:55] local LLM installation, understanding what are the parameters that you can change which lead to better outputs. You go into building AI clones. So, day two, you will actually have your own AI clone. Lot of people were asking WebHub when he was demonstrating his own YouTube and Instagram content. How is it that you can make that kind of content? You will be making that on day two.

[01:11:17] Day 3, you will go deeper into image and video generation. Day 4 will be... we'll be touch-basing on automations using a platform called as NATEN. And Day 5, we will be going into AI agents, especially voice agents and MCPs. Day 6 and day 7 are going to be deep dives.

[01:11:36] of automations and agentic workflows and building products without writing a single line of code. Now, everything that we do in week 2 is going to be the advanced level of these concepts itself, because as you can see, here we go from level 1 to level 5, and we go deeper into these concepts

[01:11:53] in week 2, right? And that is about the 14 days. We also have an engineer's track, like we mentioned, and today, the offer that we put out for everybody is that, along with this program, you get access to all of these bonus tools as well. Now, I see a couple of questions around, hey, these tools are not allowed in my organization or company.

[01:12:14] well, you know, there's not much that we can do about that right away, right? So that is about the program, everyone. I'll also call out the names of the people who have gone ahead and enrolled, and as I do that, drop in a heart for all of these people, it is because of people like these that we are able to teach

[01:12:32] thousands and thousands of people from all around the world, right? So quickly calling out the names of all of the people, we have Atik, Vishal.

[01:12:41] oh my god, there's just too many enrollments, and more are coming in at this point of time, so I might not be able to call up all of the names, but you will be getting your confirmations as soon as you go ahead and enroll, right? But Atik, Vishal, Pratik, Teeth.

[01:12:57] as real as...

[01:12:59] Ezilla, Rasan, Chantni, Rohan, Yash, Jagannathan, Anil, Vishnu Teja, Raj, Vishal, Haritha, Harikiran, Raju, Gita, Abhishek Jain, Gadam Mukesh.

[01:13:12] keep those hearts coming in for all of these people. Sandeep, Manish, Rahul, Kishore, Ashidwat, Stuti, Darshan, Arpita, Alnur.

[01:13:21] Tela Kuntla, Tela Kuntla Supreet, Deepti, Dr. Naga Satish, Ramalingeshwar Naidu, Gaurav, Ganeshwar, Ipsita, Jyoti, Hashya, Sayad, Roni, Nirman, Charu, Vijay, Amit, Siddharth, P. Haswant, Pratap, Akula, Narendra Murthi, Shubham Udit, Nagar Aja, Sri Ram A,

[01:13:44] Anand Krishnan, Ravjot Singh, Nitin Narang, Balaji, Srinath, Alok, Amrut, Bhanup Prakash, Kartik Prat...

[01:13:53] Pratish, Hireen, Praveen, Anuj, Prashant, Harshab, Pritesh, Kiran, Murli Krishnan, Ramesh, Manan, Zia Ulhaq.

[01:14:03] Ankit, Yogamaya, Sarang, Kushi, you are just making me call out hundreds of names at this point of time.

[01:14:11] Kushi Joginder, Sankrit Pratap, Aditya, Karthik, Sivabalan, Snehal, Paban, Karishma, Sheshi, Dhruv, Shubham, Rakesh, Sangeeta, Surya, Nitin.

[01:14:26] Pantadi, Tulsi, Siram, Solomon Raj, Venkata Suresh, Hirain, Amita, these are the names that I've gotten so far, but more are coming in at this point of time.

[01:14:37] We will do a call-out tomorrow as well, of all of the enrollments that would come in. My team also mentioned that a lot of people reached out on the phone number that was shared, which I can share once again.

[01:14:49] And our team requested us to keep the enrollment links active for a few more hours, so that people who are enrolling by calling our team can continue to enroll, right? But...

[01:15:00] you know, like Weber mentioned, a lot of people are also requesting for additional scholarships, which we cannot do, and if you need additional scholarships, then you might as well learn everything on your own. Earn a little bit of money, and then invest that amount or money in your education once again, right?

[01:15:18] This program is only for the people who have the luxury to go ahead and invest in their education or upskilling at this point of time.

[01:15:25] But with all of this being said.

[01:15:28] Tomorrow is day 2, and we get started once again at 10am IST. Like I said, tomorrow we are going to be learning about wipe coding, we are going to be learning about image and video generation. You will actually see how non-technical people today can also build tech solutions.

[01:15:46] it's going to be very, very interesting. With that being said, we come to the end of today's session. I'm just turning the chat box on to myself to see if there are any other questions, but if there aren't any, then you can drop off the session, and we will see you tomorrow at exactly 10 a.m. IST.

[01:16:06] The roadmap will come tomorrow. EMI plan, we have already mentioned, Sachin, it'll... you have to block your seat for 10,000 rupees right now, and then...

[01:16:15] EMI plan will come up tomorrow.

[01:16:18] Sorry, EMI plan will come up after that.

[01:16:31] The notes and the roadmap will come up tomorrow, like I mentioned, so you can drop off the call right now, and we will go ahead and, you know, help you with the roadmap and the notes tomorrow. Pavan, our team will reach out to you to help you, with the EMI plans and everything around it.

[01:16:53] Arpita, we have shown you how hands-on we are in the program. If you have any other questions, you can either write, or if you have questions, then don't enroll into the program.

[01:17:05] Because we literally showed you, the whole...

[01:17:09] you know, breakout rooms, CSAT, and everything else, right? People who are asking for an extension, please just fill out this form. I'm... I can't guarantee whether we'll open the slots tomorrow or not. I'll have to check with our partners and the people who have enrolled as well, but

[01:17:26] Yeah, you can fill up the form that I've shared.

[01:17:32] We don't have anything offline, Vinay, if that is what you're referring to.

[01:17:39] Every month, we conduct one batch of the accelerator program, but the price will not remain the same. So, if you have blocked your seat, you can go ahead and defer to a future batch as well.

[01:17:55] Yes, Manan. If you are a student, then you have the time to go ahead and learn everything on your own.

[01:18:01] Like I said, tomorrow we are learning two topics, white coding and image and video generation.

[01:18:07] Yes, they will be available tomorrow, Alekia.

[01:18:10] Like I said, the roadmap will be shared tomorrow.

[01:18:15] End of day.

[01:18:21] All right, everyone, I think with that, we come to the end of the entire session. Thank you so much, and I'll be seeing all of you tomorrow at... from 10 a.m. IST. It's gonna be a long day.

[01:18:33] will have a lot of fun together. Thank you so much, everyone. Bye, have a great evening going forward.

[01:18:49] Bye, everyone. Gadam, our team will reach out to you and help you out with it. Take care, and bye.
