Source: GMT20260607-041740 Recording · 2752 segments · Speakers: Audio shared by Dileep Karri, Audio shared by Shantanu Tungare, Dileep Karri, Shantanu Tungare

- [00:00:20] Audio shared by Phani Krishna - Outskill: Coffee, glowing screens, 30 flags inside one dream. Names and faces, different skies Same while spark behind.
- [00:00:37] Audio shared by Phani Krishna - Outskill: Do this!
- [00:00:45] Audio shared by Phani Krishna - Outskill: Turn in our fingertips.
- [00:00:51] Audio shared by Phani Krishna - Outskill: Rebuild it up at outscale.
- [00:00:58] Audio shared by Phani Krishna - Outskill: to something powerful!
- [00:01:01] Audio shared by Phani Krishna - Outskill: We're not just watching change
- [00:01:12] Audio shared by Phani Krishna - Outskill: Country's one ship.
- [00:01:24] Audio shared by Phani Krishna - Outskill: We build it up together!
- [00:01:33] Audio shared by Phani Krishna - Outskill: I sat on tiny ties Trading wins and rookie tribes. Every step becomes a clip.
- [00:01:44] Audio shared by Phani Krishna - Outskill: Every house!
- [00:01:45] Audio shared by Phani Krishna - Outskill: He comes out
- [00:01:50] Audio shared by Phani Krishna - Outskill: Now we're dangerous!
- [00:02:05] Audio shared by Phani Krishna - Outskill: Scalp it out, scalp!
- [00:02:15] Audio shared by Phani Krishna - Outskill: I'm just watching Shane
- [00:02:26] Audio shared by Phani Krishna - Outskill: Countries won't share.
- [00:02:38] Audio shared by Phani Krishna - Outskill: We build it up together!
- [00:02:48] Audio shared by Phani Krishna - Outskill: Berlin, Lagos, rain, Tokyo in.
- [00:02:51] Audio shared by Phani Krishna - Outskill: For the same call, teach me how to build it all.
- [00:02:55] Audio shared by Phani Krishna - Outskill: It's your hope.
- [00:02:57] Audio shared by Phani Krishna - Outskill: Cold!
- [00:03:03] Audio shared by Phani Krishna - Outskill: Lights up, we build it up, it outskilled.
- [00:03:08] Audio shared by Phani Krishna - Outskill: From a crowd!
- [00:03:10] Audio shared by Phani Krishna - Outskill: Lise in thought to something powerful.
- [00:03:14] Audio shared by Phani Krishna - Outskill: We're not just watching change
- [00:03:26] Audio shared by Phani Krishna - Outskill: monster!
- [00:03:37] Audio shared by Phani Krishna - Outskill: Put it up together.
- [00:03:53] Audio shared by Phani Krishna - Outskill: This is what the future looks like.
- [00:03:55] Audio shared by Phani Krishna - Outskill: And it starts with you.
- [00:04:13] Audio shared by Phani Krishna - Outskill: Jelly!
- [00:04:20] Audio shared by Phani Krishna - Outskill: Go and screams!
- [00:04:24] Audio shared by Phani Krishna - Outskill: 30 flags inside one dream.
- [00:04:28] Audio shared by Phani Krishna - Outskill: Names and faces Different sky!
- [00:04:32] Audio shared by Phani Krishna - Outskill: Say what's what?

[00:04:37] Audio shared by Phani Krishna - Outskill: We showed up curious!

[00:04:40] Audio shared by Phani Krishna - Outskill: Now we're dangerous!

[00:04:41] Audio shared by Phani Krishna - Outskill: Turning one!

[00:04:49] Audio shared by Phani Krishna - Outskill: Future!

[00:04:53] Audio shared by Phani Krishna - Outskill: Way too!

[00:04:54] Audio shared by Phani Krishna - Outskill: You need a bid-out skill!

[00:04:58] Audio shared by Phani Krishna - Outskill: Crazy thoughts are so... Watchin' change!

[00:05:29] Audio shared by Phani Krishna - Outskill: Side by side.

[00:05:35] Audio shared by Phani Krishna - Outskill: Try!

[00:05:37] Audio shared by Phani Krishna - Outskill: Every stub... comes up.

[00:05:44] Audio shared by Phani Krishna - Outskill: We showed up to... Now we're dangerous!

[00:05:48] Audio shared by Phani Krishna - Outskill: Turnin' what?

[00:05:53] Audio shared by Phani Krishna - Outskill: Every try takes an ideal

[00:06:08] Audio shared by Phani Krishna - Outskill: It's watching change!

[00:06:14] Audio shared by Phani Krishna - Outskill: Day 2!

[00:06:30] Audio shared by Phani Krishna - Outskill: Legos rain, Tokyo, and throughout

[00:06:34] Audio shared by Phani Krishna - Outskill: Teach me how to build it all. Raise your hand, raise your hope. We're the ones who write the code.

[00:06:41] Audio shared by Phani Krishna - Outskill: than just a class. This is how we change the map!

[00:06:50] Audio shared by Phani Krishna - Outskill: Day 2!

[00:07:09] Audio shared by Phani Krishna - Outskill: God, Jesus!

[00:07:24] Audio shared by Phani Krishna - Outskill: On today 2!

[00:07:31] Audio shared by Phani Krishna - Outskill: future looks like.

[00:07:34] Audio shared by Phani Krishna - Outskill: It starts with you.

[00:07:53] Audio shared by Phani Krishna - Outskill: Door swing open.

[00:07:57] Audio shared by Phani Krishna - Outskill: New names on the screen.

[00:08:01] Audio shared by Phani Krishna - Outskill: Buzz in the hallway.

[00:08:05] Audio shared by Phani Krishna - Outskill: Feels... Like a dream.

[00:08:12] Audio shared by Phani Krishna - Outskill: Let your worries down.

[00:08:19] Audio shared by Phani Krishna - Outskill: Right?

[00:08:22] Audio shared by Phani Krishna - Outskill: Welcome to the OSCU AI Workshop!

[00:08:26] Audio shared by Phani Krishna - Outskill: Glad you made it, glad you're here today. We'll walk out using JNI non-stop

[00:08:34] Audio shared by Phani Krishna - Outskill: Gettin' more done in a smarter way!

[00:08:55] Audio shared by Phani Krishna - Outskill: Questions and coffee.

[00:08:59] Audio shared by Phani Krishna - Outskill: It's all the glue.

[00:09:03] Audio shared by Phani Krishna - Outskill: Can this really help?

[00:09:07] Audio shared by Phani Krishna - Outskill: Watch it go

[00:09:22] Audio shared by Phani Krishna - Outskill: to your heart.

[00:09:25] Audio shared by Phani Krishna - Outskill: Really, I would stop.

[00:09:28] Audio shared by Phani Krishna - Outskill: Glad you made it, glad you're here today. We'll walk out using Jenna

[00:09:36] Audio shared by Phani Krishna - Outskill: Get involved done in a smarter way

[00:09:57] Audio shared by Phani Krishna - Outskill: Wheeler.

[00:09:59] Audio shared by Phani Krishna - Outskill: Tomorrow we fly.

[00:10:02] Audio shared by Phani Krishna - Outskill: Captain Top!

[00:10:03] Audio shared by Phani Krishna - Outskill: the price.

[00:10:06] Audio shared by Phani Krishna - Outskill: Test and try.

[00:10:10] Audio shared by Phani Krishna - Outskill: Kill you!

[00:10:11] Audio shared by Phani Krishna - Outskill: See,

[00:10:20] Audio shared by Phani Krishna - Outskill: And you're here today!

[00:10:22] Audio shared by Phani Krishna - Outskill: Walk out you!

[00:11:07] Audio shared by Phani Krishna - Outskill: Doors swing open, new names on the screen, buzz in the hallway. Feels like a dream. Pull up a chair now, set your worries down, we're building the future right here, right now.

[00:11:22] Audio shared by Phani Krishna - Outskill: Welcome to the outlet!

[00:11:25] Audio shared by Phani Krishna - Outskill: Workshop, hey! Glad you made it, glad you're all here today!

[00:11:30] Audio shared by Phani Krishna - Outskill: **** out you!

[00:11:32] Audio shared by Phani Krishna - Outskill: And I'm stuck!

[00:11:42] Audio shared by Phani Krishna - Outskill: Curious!

[00:11:56] Audio shared by Phani Krishna - Outskill: and coffee. Laptops all the go, can this really help me? Just watch it go from blank It's bad!

[00:12:04] Audio shared by Phani Krishna - Outskill: To one click start, new kind of teammate right next to your home.

[00:12:10] Audio shared by Phani Krishna - Outskill: Welcome to the hour!

[00:12:45] Audio shared by Phani Krishna - Outskill: Tomorrow!

[00:12:49] Audio shared by Phani Krishna - Outskill: Supplies, side by side.

[00:12:54] Audio shared by Phani Krishna - Outskill: Plus, soft skills.

[00:13:06] Audio shared by Phani Krishna - Outskill: Let's go!

[00:13:14] Audio shared by Phani Krishna - Outskill: Finally, our workshop!

[00:13:18] Audio shared by Phani Krishna - Outskill: Glad you're here today!

[00:13:20] Audio shared by Phani Krishna - Outskill: We'll walk out who's in jail

[00:13:22] Audio shared by Phani Krishna - Outskill: Non-stop getting more done in a smart.

[00:13:50] Phani Krishna - Outskill: Alright everyone, very warm welcome to Day 2 of the Generative AI Mastermind here at Outskill. I hope all of you are able to hear me well, and see me well. Drop in a yes on the chat if my voice is clear, my video is clear for you, and the tech is absolutely fine at your end.

[00:14:10] Phani Krishna - Outskill: Perfect, perfect, perfect.

[00:14:13] Phani Krishna - Outskill: I see a lot of... Messages saying that the tech is fine on your end.

[00:14:19] Phani Krishna - Outskill: and my end as well. In case my video is breaking for anyone, or my audio is getting stuck for anyone, please drop off the call and join back in, and it should work out very well for you. And please also use headphones, like I reminded yesterday as well. Use headphones, because

[00:14:36] Phani Krishna - Outskill: Just like yesterday, today also we are going to be having a lot of demos.

[00:14:41] Phani Krishna - Outskill: When you're using headphones, if you have a bigger screen, or if you're on a laptop or a desktop, you're going to be able to see what our mentors are showing you very clearly, and you will also be able to follow it along after the entire mastermind gets over. But are you all excited to get started with Day 2?

[00:15:01] Phani Krishna - Outskill: Yes, Sonil says, I'm 11 years old. Sonil, that is great that you're attending the mastermind. Please don't spam on the chat, that'll be very nice, and that is something that I would love for you to continue throughout your life as well. Now, as I look at the poll, as I look at the poll.

[00:15:20] Phani Krishna - Outskill: I see that about 15-20% of you, 17-20% to be precise, have missed out on day one that happened yesterday. So, shall we all get started with a quick recap of all of the things that we covered yesterday over 8 entire hours? We are going to probably take around 5 to 8 minutes.

[00:15:40] Phani Krishna - Outskill: to do a recap of everything that we covered yesterday, and then I will set context for Day 2 and what we are going to be learning over the next 6 to 8 hours that we have here today. Drop in recap on the chat if you want a recap of what we learned yesterday, and everybody who is asking about recordings, you will not be getting the recordings.

[00:16:01] Phani Krishna - Outskill: You will be getting session resources. We have already shared yesterday's resources, I will drop them in once again, and everybody who is asking about a certificate

[00:16:11] Phani Krishna - Outskill: I will speak about the certificate towards the end of the day today, because the certificate will only be given to those people who have completed the whole mastermind.

[00:16:21] Phani Krishna - Outskill: Love it.

[00:16:23] Phani Krishna - Outskill: The roadmap as well, Chandanu, will come to you End of today.

[00:16:29] Phani Krishna - Outskill: As we get there. Perfect. Quickly pausing the chat, quickly pausing the chat, so that we can all get into the recap, and at this point of time, I want everybody to grab your notebooks, I want everybody to grab your pen as well, even if you have not attended yesterday.

[00:16:47] Phani Krishna - Outskill: Take down a few notes from the recap that I'm going to be sharing, so that you get a sense

[00:16:52] Phani Krishna - Outskill: of what are the things that we covered yesterday, and for people who attended yesterday completely, this recap is going to be acting like a refresher. A lot of people went ahead and made posts on LinkedIn. I was very happy to see them yesterday. Many people also took pictures of their notebooks, and they posted it, so I love the way all of you are learning generative AI over this weekend.

[00:17:16] Phani Krishna - Outskill: But we got started with the Mastermind yesterday by truly understanding how AI is transforming the way we work.

[00:17:24] Phani Krishna - Outskill: And we saw that irrespective of who we are as of today, we could be entrepreneurs, we could be working professionals with n number of years of experience, or we could be hustlers as well. We all need to become

[00:17:38] Phani Krishna - Outskill: good at AI orchestration, as Webhov mentioned yesterday. I'm gonna turn the reactions off so that it does not disturb anybody. Give me a second, and I will go ahead and do that.

[00:17:53] Phani Krishna - Outskill: There you go.

[00:17:54] Phani Krishna - Outskill: Perfect, and I'll put this... right here, for... myself.

[00:18:08] Phani Krishna - Outskill: Alright, perfect, perfect. Like I was saying.

[00:18:12] Phani Krishna - Outskill: We got started yesterday by truly understanding that irrespective of who we are as of today, we really need to become great at AI orchestration, as Vaibhog mentioned. And at Outskill, we have been calling people who can orchestrate multiple AI tools and models really well as AI generalists. And when you become an AI generalist, you should not just be thinking of solving problems in your own

[00:18:36] Phani Krishna - Outskill: own domain, you should be thinking of solving problems across multiple different domains. And this is what will help you win in the AI-first world. Like we mentioned yesterday, beyond of using the tools, using the frameworks, and the workflows.

[00:18:53] Phani Krishna - Outskill: and the LLMs, it is important for everybody to have this fundamental mindset shift.

[00:18:59] Phani Krishna - Outskill: Because with AI, you are expected to do way more than what you have been doing until today, and that is why you always need to think about how you can use AI in domains that you don't have a specialization in.

[00:19:14] Phani Krishna - Outskill: You could be a software developer as of today, but let's say you launch your own product into the market, you can also be your own marketer.

[00:19:22] Phani Krishna - Outskill: You can also be your own designer. You can also be your own data analyst by using AI, and we showed a lot of examples of that yesterday, right from using tools to building AI bots. I'm going to do a recap of all of that as well. But...

[00:19:39] Phani Krishna - Outskill: The gear, of course, is going to be switching today, and I will explain how that is going to happen as well. But...

[00:19:46] Phani Krishna - Outskill: Once we understood how our mindset needs to completely shift with AI, we started getting into platforms. And the first platform that we looked at yesterday was called Open Router.

[00:19:59] Phani Krishna - Outskill: And it broke this myth for everybody that there are only a few AI models that we can use as of today.

[00:20:06] Phani Krishna - Outskill: When you go to this platform called Open Router, you will be able to find more than 600 plus AI models available across text generation, image generation, video generation, data analysis, math skills, and all of that, right?

[00:20:24] Phani Krishna - Outskill: you have more than 600 plus AI models that are available today, and then you use a tool like GetMulti to be able to go ahead and use all of these AI models, because many of these don't have direct interfaces like a ChatGPT does, or a Claude does, or an Anthropic has Claude as an interface, because of which we are able to go ahead and use AI models like Opus 4.0,

[00:20:49] Phani Krishna - Outskill: Opus 4.7, Sonnet 4.6, or Haiku, etc, like we showed you yesterday, right? But there are many open source models

[00:20:58] Phani Krishna - Outskill: models that are free for usage as well, that you cannot directly use. And hence, you plug it into a tool like GetMulti, and then you can go ahead and use them. Of course, WebHub in the second half also showed LM Studio, he also showed how you can run some of these models locally, but that is the learning curve that everybody has to take as well to be able to do such things.

- [00:21:23] Phani Krishna - Outskill: And then, as we got started yesterday, we learned how AI models foundationally work. Text generation models, how do they work? When you are going ahead and giving a prompt, when you are going ahead and querying an AI model.
- [00:21:40] Phani Krishna - Outskill: The prompt that you are giving is broken down into something called as tokens, because computers cannot directly understand English.
- [00:21:49] Phani Krishna - Outskill: They understand binary language, and through tokenization and embedding, whatever we are going ahead and providing in terms of a prompt is converted into numerical vectors that have certain meaning attached to them.
- [00:22:04] Phani Krishna - Outskill: And then, the model gives special attention to certain parts of the sentence, or the binary language that it will be seeing for itself.
- [00:22:15] Phani Krishna - Outskill: And that is how it predicts the next best response in the entire sentence, and then it spins that out for you. Now, this is something that we taught everyone on a high level. People who missed out, you can take a screenshot of it, and you can go deeper into this using the resources that we have shared, and also using the internet and chat GPT, of course.
- [00:22:38] Phani Krishna - Outskill: But go...
- [00:22:39] Phani Krishna - Outskill: as deep as required, right? The idea here is not to make you a techie. The idea here is to provide you with enough information so that tomorrow, when you have to go ahead and probably give a talk around AI, you know what you're talking about and what you're dealing with as well. Even when you are solving problems.
- [00:22:59] Phani Krishna - Outskill: And building solutions with AI, you need to know the backend architecture of what is happening.
- [00:23:05] Phani Krishna - Outskill: Now, to make best use of these AI models, we saw and learned that prompting is a key skill. And by the way, prompting is eventually evolving into something called as context engineering, and that is what you will learn when you go deeper into Level 1, like Webho mentioned yesterday. But we taught everyone a magic prompt formula yesterday to get started with and
- [00:23:30] Phani Krishna - Outskill: Then, eventually, as the day progressed.
- [00:23:33] Phani Krishna - Outskill: we built on top of the magic prompt formula as well, using something called as the Markdown Prompting Structure. I will talk about the Markdown Prompting structure, but again, give me a thumbs up if you have taken a screenshot of the magic prompt formula. This is a beautiful starting point for everybody in terms of using AI. And as you use this prompting structure, wherein you have a role.
- [00:23:57] Phani Krishna - Outskill: a task, an instructional and data backing your entire prompt, or it could be examples and non-examples of what you would like AI to give you as a result. If you're adding that, your outputs will be much better than what you're already getting.
- [00:24:15] Phani Krishna - Outskill: Loving these thumbs ups.
- [00:24:20] Phani Krishna - Outskill: And then, we went into building our own generative AI toolkit. And when we went about building our own generative AI toolkit, we saw a bunch of tools for different use cases. It started with Flow by this company called Whisper.
- [00:24:35] Phani Krishna - Outskill: Again, people who missed out yesterday completely, you are going to be receiving the resource document as well. Just wait until the lunch break, and I will share it with you. The resource document has links of all of these tools.
- [00:24:49] Phani Krishna - Outskill: And their use cases and descriptions written down very, very clearly.

- [00:24:53] Phani Krishna - Outskill: So, don't worry about noting down the names of all of these tools that I'm speaking, but try and use these tools after the entire mastermind gets over. I'm just quickly running you through all of these things so that you come to the same page before we get started with today's learning. So.
- [00:25:10] Phani Krishna - Outskill: Flow by Whisper is something that we saw yesterday. We are going to be using this today as well. It converts our voice to text so that we don't have to type prompts anymore. There's a hotkey. Whenever I want to speak, I can click on that hotkey, and it starts capturing my voice, and
- [00:25:29] Phani Krishna - Outskill: One common question that people had yesterday, which I tried to explain also, was why to use Whisper Flow when you have the dictate option inside of ChatGPT or inside of Cloud. Well, it's a preference, end of day.
- [00:25:44] Phani Krishna - Outskill: Flow is a tool that works across your entire system, because you're installing it as an application in your system. So, if you're using WhatsApp, if you're using Slack or Microsoft Teams.
- [00:25:57] Phani Krishna - Outskill: or a Word document. Anything, anywhere, you can go ahead and use Flow, whereas the dictate option is only available inside of ChatGPT, inside of Claude, a bunch of these tools, and a bunch of white coding products as well that you're going to be seeing today. But it is not there everywhere.
- [00:26:16] Phani Krishna - Outskill: And when you get habituated to that, that is when Flow becomes very, very useful. Of course, there are a lot... lot other... lot of other open source, tools as well that are available that do the same today, which is voice to... or speech-to-text translation.
- [00:26:34] Phani Krishna - Outskill: And then we went ahead and saw Gemini. We eventually also used Gemini to build Gemini Gems, which people absolutely loved. We learned Claude yesterday and many use cases of Claude, but after yesterday's session happened.
- [00:26:50] Phani Krishna - Outskill: A lot of people reached out to us over email asking for a deeper session or a deeper workflow using Claude itself. So today, we are going to be including that as well. We will be teaching you a little more about how you can
- [00:27:07] Phani Krishna - Outskill: you know, use Claude in the best possible way. There are projects, there are skills, we couldn't get into all of them in detail yesterday, but today we will try to cover that, because a lot of people asked for it. Drop in a heart if you're excited to get that deep dive into Claude as well, and we will probably take one or two use cases and show this to you, because it's not beyond of that.
- [00:27:32] Phani Krishna - Outskill: I'm guessing many of you might have started using Claude lately, because of which we got those requests, and we will try to show you what you can really do on Claude, and some of the best practices as well.
- [00:27:44] Phani Krishna - Outskill: We also saw Fireflies.ai.
- [00:27:48] Phani Krishna - Outskill: And how these meeting notetakers, AI meeting note-takers today, can attend meetings on behalf of us, and we could go ahead and use them to get recap of all of the meetings that we are attending.
- [00:28:00] Phani Krishna - Outskill: And you also saw how Fireflies.ai was connected to an application that WebHub had built for himself.
- [00:28:09] Phani Krishna - Outskill: How he had connected Fireflies using its API, you're going to be learning more about APIs today as well, as we get into product building. But using the API, Fireflies was connected to WebHub's Executive Assistant, and that is something that we all at Outskill have as of today as well.
- [00:28:28] Phani Krishna - Outskill: The executive assistant, Jerry, if you remember, and if you liked it, drop in a heart.

[00:28:33] Phani Krishna - Outskill: You know, in the future, all of us should

[00:28:37] Phani Krishna - Outskill: ideally have multiple executive assistants for ourselves, right? Doing multiple different things. We can have as many executive assistants as we may want as of today, and tools like fireflies.ai or Otter.ai, etc, give you their API keys because of which you can use that tool

[00:28:57] Phani Krishna - Outskill: and connect it to any other product that you're building for yourself as well. We also saw Fort AI, which is incredible when it comes to product photoshoots. We saw SuperGrow, a tool that people can use or start using if you want to build content on LinkedIn, and it's not an if.

[00:29:15] Phani Krishna - Outskill: Everybody today should have an active presence on LinkedIn, and also on X. It's become a part of the process, and SuperGrow is a tool that can help you along the way.

[00:29:27] Phani Krishna - Outskill: We saw perplexity and its capabilities of doing deep research. We also saw that deep research

[00:29:33] Phani Krishna - Outskill: is available inside of Gemini, ChatGPT, Claude, and all of these LLM models, right? And one common question that came in on the chat yesterday when we were showing deep research is, how can we really trust

[00:29:47] Phani Krishna - Outskill: All of the, you know.

[00:29:50] Phani Krishna - Outskill: all of the, you know, answers or responses that AI is giving, and that is what we addressed, but I'm repeating that for the people who missed out as well, that whenever you do deep research, you also get citations.

[00:30:06] Phani Krishna - Outskill: in the responses, and because of that, you can go ahead and manually check whether the data that the AI models are pulling out while doing research is accurate or not. And then, we saw happenstance

[00:30:19] Phani Krishna - Outskill: the incredible tool that allows you to grow your network. We saw numerous.ai, and we also saw Suno, with which you can generate a ton of music

[00:30:30] Phani Krishna - Outskill: as per your wish today. And then, WebHub came in, and he took it a notch up. He said, why should we just use the tools that are available? Why not build our own tools? And that is when we went deeper into ChatGPT and explored custom GPTs.

[00:30:49] Phani Krishna - Outskill: We saw how we could build a custom GPT entirely, and we saw how the prompt, or the instruction inside of the custom GPT is the most important.

[00:31:00] Phani Krishna - Outskill: And of course, you could build a custom GPT inside of Gemini in the... and they call it Gemini Gems. You could do the same inside of Claude, they call it Claude Projects. You could do the same inside of Perplexity, they call it Perplexity Spaces. But in all of this.

[00:31:18] Phani Krishna - Outskill: The instructions is what we focused on, and that is when we learned the markdown prompting structure.

[00:31:26] Phani Krishna - Outskill: Wherein, it is similar to the magic prompt formula, but with hashtags, stars, and everything around it, as you can see on the screen. Take a screenshot of it, and for those of you who missed out yesterday.

[00:31:41] Phani Krishna - Outskill: If you are wondering why or what do these hashtags and stars mean, why does this look technical? It's absolutely not. It's a way to let the AI models know which part of the text that you're putting out, which part of the prompt that they should focus on, because

[00:31:58] Phani Krishna - Outskill: In this world, you can't really bold things or put them in italics and all of that. You can't change the size of things in instructions when you go ahead and write them, and that's why, when you use the markdown prompting structure, AI models have the ability to understand which parts of the prompts should they be paying more attention to.

[00:32:20] Phani Krishna - Outskill: And then, WebHub went ahead and showed you all of the 5 different levels.

[00:32:25] Phani Krishna - Outskill: and showed you the outcomes that you can have with each of these levels. People who missed out on this part of the session yesterday, I will do a recap of this towards the lunch break, because that is when we will also go ahead and give you the roadmap.

[00:32:41] Phani Krishna - Outskill: And the roadmap that we will be giving you will have deep dives of all of these levels, but people who missed yesterday, consider that these are the 5 different levels that you and everybody needs to go deep into. This will help you work like an AI orchestrator or an AI generalist.

[00:32:59] Phani Krishna - Outskill: We are going to be providing you a resource document that'll help you go into the depth of each of these levels.

[00:33:05] Phani Krishna - Outskill: And yesterday, we saw most parts of Level 1 and Level 2, and we also saw Level 4. And of course, you saw the outcomes that you can get

[00:33:15] Phani Krishna - Outskill: by going deep into each of these levels, but today, the focus is going to be on Level 5 and also on level 3 after the lunch break. We're going to be learning how we can build products without writing a single line of code, and then we are going to be learning how we can generate movies

[00:33:34] Phani Krishna - Outskill: or probably ads. All of it with AI. If you're excited, drop in excited on the chat, excited for Day 2. That is what I would like to see. How many of you are with me for Day 2? How many of you have the excitement levels up?

[00:33:53] Phani Krishna - Outskill: Perfect, and do not worry about the resources that we shared yesterday. I will share them once again, but for the next two and a half to three hours.

[00:34:03] Phani Krishna - Outskill: We have Dilip coming in to spend time with us. Dilip is going to be doing a deep dive of Claude, helping us understand how these AI models can be used in a much better way as entrepreneurs and working professionals. He's also going to be teaching us how we can make AI write code for us.

[00:34:22] Phani Krishna - Outskill: And how we can build products using that technology.

[00:34:27] Phani Krishna - Outskill: Dilip heads generative AI education at Outskill today, and has been teaching tens and thousands of people how they could adopt generative AI, and I'm super excited to have him right here with us.

[00:34:40] Phani Krishna - Outskill: Keep that excitement on on the chat, and please don't spam, but let me quickly check if Dilip has the access.

[00:34:47] Phani Krishna - Outskill: Yes.

[00:34:49] Phani Krishna - Outskill: Dilip, I hope you are able to hear me. Give me a second. I will have to make you the co-host. Yes.

[00:34:59] Phani Krishna - Outskill: Hi, Dilip. I hope you can hear me.

[00:35:02] **Dileep Karri:** Yes, yes, yes, absolutely.

[00:35:05] Phani Krishna - Outskill: put the spotlight on you as well. Perfect.

[00:35:08] Phani Krishna - Outskill: Yes, the chat is rolling, Bilip, I think we can get started.

[00:35:13] **Dileep Karri:** Absolutely. Thank you, thank you very much, all.

[00:35:18] **Dileep Karri:** Okay, let's get started.

[00:35:24] **Dileep Karri:** Give me a second.

[00:35:29] Phani Krishna - Outskill: Spandana, the AI botlink that we built yesterday, we are going to be updating that with today's transcripts as well, and by tomorrow, you will have access to it. Everybody will be receiving it over email. We can't share that today right away, because

[00:35:44] Phani Krishna - Outskill: Day 2 sessions are also going on, and we need the transcripts of these sessions.

[00:35:51] **Dileep Karri:** Overdue. Right.

[00:36:02] **Dileep Karri:** All right, so folks, let's get started, right? We will, you know, get to the session, and let me kind of turn off the chat, right, so that...

[00:36:13] **Dileep Karri:** There is no distraction. So I'll keep turning the chat on and off.

[00:36:18] **Dileep Karri:** Right? So that, we, you know, there is no, absolutely no distraction, and I'll keep engaging with you overall, so don't worry about it. So what is going to be today's session? In today's session, what I'm going to do is, I'm going to go very deep into Claude, so expect half of the session to be going deeper into Claude, its use cases, what are the features.

[00:36:40] **Dileep Karri:** how you should use it, how you should not use it, and then I will go deep into building a website and building

[00:36:48] **Dileep Karri:** a web app, eventually as we come towards the end. So, expect the session to be around, two and a half hour-ish.

[00:36:57] **Dileep Karri:** maybe 30 minutes here and there, basis, you know, how the... how much time, Claude takes overall, and we will, cover multiple things as we move along.

[00:37:08] **Dileep Karri:** Alright, so, let's get started, with this. So, some expectation setting.

[00:37:15] **Dileep Karri:** I will cover a good amount of clot, but don't expect that I will go super, super deep into each and everything, because that is not possible in the limited time. What I'll do is, I will try to give you an overview, I will go breadth-wise, I will try to explore all the possible features, but in depth, I will not be able to do.

[00:37:35] **Dileep Karri:** I will talk about how I'll wipe code a website, I will talk about how I'll wipe code a web app, and here, I will use Claude as my thinking engine, and as supporting engine, I would use other tools so that you can see how we can build those various tools with the support of, you know, the intelligence provided by Claude.

[00:37:55] **Dileep Karri:** Okay? So, are we clear, everybody? Is the expectation clearly set? So, you will get notes of this workshop, you will not get the slides of the workshop or anything like that. So, I hope the expectation is clear. Can we get started? Is the expectation clear what we are going to cover? What is the depth we are going to cover? And what is it that we are going to do in this session?

[00:38:15] **Dileep Karri:** Alright, let's get started.

[00:38:18] **Dileep Karri:** Okay, so what I'm going to do is we are going to go deep into Claude, right? So, a lot of you have heard of Claude, maybe you have tried it, etc. And this session, we are going to go into the various basics of Claude in detail, and also talk about how you can build stuff with Claude, and, you know, use Claude as a great white coding assistant through and through.

[00:38:42] **Dileep Karri:** So, folks, how many of you have used Claude before? Type yes if you have used it, type no if you have not used Claude before.

[00:38:51] **Dileep Karri:** How many of you have used Claude before? Yes? No? Yes? No. I see from the chat.

[00:38:58] **Dileep Karri:** Okay? I see, like, a, you know, mix of 60% to 70% have already tried Claude. The rest of you have not tried Claude, okay? So, no worries, I have made this session in such a way that people who not tried Claude will also get the benefit. People who tried Claude will also understand what is happening.

[00:39:20] **Dileep Karri:** Okay, so what you will walk out with in the first part of the presentation, we will do a cloud deep dive, where 90% of your Cloud usage will improve based on the deep dive we're going to do on Claude. Then we'll try to build a website live, and we are also going to build a web application live overall.

[00:39:40] **Dileep Karri:** Okay, I will keep sprinkling in some tips of how to use Claude very well, so that'll be throughout the presentation. So, by the end of the next two to three hours, you should be able to understand the Claude's four modes and the three models.

[00:39:52] **Dileep Karri:** You should be able to pick the right one for every task, you should be able to understand things like projects, memory, a little bit of style, and the skills, and you should also be able to, you know, build webcoding workflows with cloth. That is what we're going to do in the next two to three hours.

[00:40:08] **Dileep Karri:** So, why Claude? Okay, now, usually when this question comes up, people say, you know, kind of very defensive, saying that, hey, you know, why are you using Claude? Is Claude better? Is that better? Is this better? Etc. So, what I want to do is, I want to provide a very honest take, and not a fanatic take.

[00:40:28] **Dileep Karri:** What do you mean by fanatic take? Fanatic take means I love Claude, irrespective of how they are, I kind of adore Claude, I will only advocate Claude. That is not the position I am taking.

[00:40:39] **Dileep Karri:** What I am telling is, I am going to tell you exactly what Claude is good for. You can test it out, and then you can pick up whichever use cases we want. So this is going to be an unbiased session wherein we are not going to be very fanatic and advocate Claude overall, but it is just an informative session so that people who have been seeing or hearing a lot of

[00:41:02] **Dileep Karri:** type on Claude, you will understand exactly what is happening beyond it, and you will be able to take an informed decision whether you really need to switch to Claude, or you are happy with the tools that you have been using.

[00:41:15] **Dileep Karri:** Okay? So this is a quick comparison of the big three. Okay, this is an honest, unbiased take over the usage that I have seen across the board, plus the usage that I have kept seeing myself across, and talking to multiple people.

[00:41:33] **Dileep Karri:** If you don't know what to use.

[00:41:36] **Dileep Karri:** You have no idea you are the very first user of AI, and you want to get started.

[00:41:43] **Dileep Karri:** My recommendation would be start with ChatGPT, okay? That is the best ecosystem. It is very good for casual use, right, and its free plan is pretty decent. The free plan of ChatGPT is pretty decent, so explorers who are just getting your feet dirty into AI, you should start off with ChatGPT.

[00:42:03] **Dileep Karri:** Then, if you have a deep Google integration, what I mean is, you work a lot with Google. You work on Gmail, you work on Slides, you work with YouTube.

[00:42:15] **Dileep Karri:** a lot, like, you consume a lot of information from YouTube, then Gemini makes much more sense, because Gemini is Google's family, they are already trained, already indexed on all that information. So Gemini is very good if you have got a deep Google integration. Now, Claude.

[00:42:32] **Dileep Karri:** where Claude comes into the picture. Claude comes into the picture when you are doing the writing, when you are doing reasoning, when you are doing coding, or any kind of agentic work.

[00:42:43] **Dileep Karri:** By agent-ic work, I mean that you have a sequence of tasks that you need to do to accomplish a goal. If you are able to define them properly, step by step, that agentic work, Claude, will be better. But I have to tell you that ChatGPT has made quite some strides in agentic work, and they have caught up, in a way, to Claude. And Gemini has recently released Gemini Spark, which is not yet out in the public.

[00:43:07] **Dileep Karri:** Which, again, tries to bridge the gap

[00:43:11] **Dileep Karri:** on, this. So, if Gemini Spark becomes live, for everybody.

[00:43:17] **Dileep Karri:** And of course, we'll have to see how it works, then it would also catch up on agentic work.

[00:43:22] **Dileep Karri:** So, quick summary, ChatGPT, very good, for complete, you know, casual usage, like, daily usage. You are just casually searching something, asking questions, getting answers. ChatGPT is decent. Then, if you have

[00:43:38] **Dileep Karri:** deep Google integration, and you're working with YouTube, you want to do some YouTube intelligence, etc, Gemini makes more sense. And if you were a writer, maybe working on marketing, you are doing reasoning work a lot, you are doing coding work a lot, and agentic work, then Cloud makes much more sense.

[00:43:58] **Dileep Karri:** Alright, so before I move on, just a quick check. Everybody understanding clearly so far, you are able to follow my pace, you are understanding what all we are covering, yes?

[00:44:09] **Dileep Karri:** Okay? Awesome. Let's move ahead.

[00:44:14] **Dileep Karri:** Okay? So now that we are able to, you know, understand this, where you have everything, when should you actually reach for Claude? Okay? These are the five things that I would recommend. Number one.

[00:44:29] **Dileep Karri:** You want writing that sounds like a human.

[00:44:32] **Dileep Karri:** Compared to every model, the Cloud model's writing output is as close to a human as it gets, and if you are providing the prompt and tweaking it better, it will go even more solid in terms of writing.

[00:44:47] **Dileep Karri:** In yesterday's session, when you saw what Weibov had done, right, this is exactly what he has done, which is writing like a person, and that kind of a prompt, along with Claude, produces much more benefits, and the writing sounds absolutely like a human.

[00:45:04] **Dileep Karri:** When you want long, careful reasoning, there is a lot of context you want to provide. You want to do coding at any different level. You want multi-step work, and I'll demonstrate what multi-step work means, and anything that you would like to give to a smart junior overall, all of that, you could reach out for Claude

[00:45:23] **Dileep Karri:** And Claude would, you know, ensure that we are able to, kind of get there.

[00:45:30] **Dileep Karri:** Okay? So now we will get into the four different modes of Claude. Okay? There are four modes of Claude that everybody needs to understand, and this is the important mental model if you want to get the most out of Claude.

[00:45:44] **Dileep Karri:** The first mode is the chat mode, okay? Once I finish the modes, I will also open up the Cloud app and show you what those modes are. The first mode is the chat mode, where you are asking questions and getting the quick answers, and you don't have any

[00:46:01] **Dileep Karri:** local folder access there, don't expect any agents access there, etc. It is the baseline cloud experience, and this is available on the free mode also, and there are multiple pricing modes, which I'll come to a little later, but chat is the basic mode wherein you have got the basic chat experience.

[00:46:23] **Dileep Karri:** After you have the basic mode, you have the co-work, which is a workflow engine, where you have got the plans and the tasks which run in the background. So this is the agentic experience.

[00:46:35] **Dileep Karri:** Claude chat is, I have a question, I want to find an answer. Co-work is, I have a task, I want to get it done.

[00:46:44] **Dileep Karri:** Okay, one is a doer of task, and one is just an answerer of questions. That is what you need to understand.

[00:46:50] **Dileep Karri:** Co-work is only available on the paid plan, so what it does is, once you give a particular objective, it will break it up into tasks, run it in the background, you know, try to introduce a lot of parallel sub-agents, and then reads and writes files in a sandbox, and it's a working partner, and not, like, a chatbot.

[00:47:09] **Dileep Karri:** That is what co-work does.

[00:47:12] **Dileep Karri:** Then you have design, which is a design partner, wherein it will help you create some beautiful designs with the design components, layouts, etc, and it kind of helps you in building a idea into a visual structure.

[00:47:28] **Dileep Karri:** In fact, the slides that you see, I have built these slides on plot design itself.

[00:47:33] **Dileep Karri:** Okay? So, Cloud design helps you in terms of visual part of everything. If you want to design an application, you want to design something, you can design those with Cloud Design, and in today's session, I will demonstrate how you could use Cloud design in multiple ways.

[00:47:50] **Dileep Karri:** Then Code. Code is a development partner, which is meant for developers.

[00:47:56] **Dileep Karri:** I will not go into Cloud Code in this session, because it is more developer-friendly, but a lot of capabilities of Cloud Code is already absorbed into Co-work, so it is present in the Pro and Max plans. So, chat is present on the free plan, but if you want to go with design, if you want to go with Co-work, or if you want to go with Cloud Code, you will have to go for the paid plans.

[00:48:19] **Dileep Karri:** And as I mentioned, some people say, you're all talking about paid tools, what about free tools? You won't have that much budget, etc. But let me tell you, the cost of AI has become very, very prohibitive, so a lot of companies are now only providing their features in the paid plans only. The era of getting free

[00:48:40] **Dileep Karri:** things on AI is almost to an end. On free, you can do casual work, but if you want to get real work done, you have to put the money, but the ROI is going to be very, very good.

[00:48:52] **Dileep Karri:** Okay? So, if you want to kind of understand, and you can take a screenshot of this, chat is conversation, co-work is workflow, design is interface, and code is codebase.

[00:49:04] **Dileep Karri:** Chat means you are trying to have a conversation, and you are trying to understand what is kind of the questions that you want to get answered. Co-work is a workflow, you want to get something done, you put it in CoWork, which will do the work for you. Design is the interface. If you want to build some kind of website, front-end interfaces, you can build it with design, and code is the code base, where

[00:49:29] **Dileep Karri:** you can actually attach your code, write code, etc. Our session today, we are going to focus primarily on chat, co-work, and design, with more indexed towards chat, and co-work and design will be just touched upon on the surface level.

[00:49:45] **Dileep Karri:** Okay? Have we all understood this? So before that, let me show you how it looks like, so that it's super clear, everyone.

[00:49:59] **Dileep Karri:** So let me share my plot.

[00:50:04] **Dileep Karri:** Okay, so this is the chat mode that you see. So if you have the desktop tool, you can clearly see the chat, co-work, and the code interface. I'll show you on, even the web level, what are the chat, co-work code, and other interfaces.

[00:50:19] **Dileep Karri:** So, chat interface is where you can chat with it, just like ChatGPT or Gemini, or any other tool. It is the basic chat interface which is available.

[00:50:30] **Dileep Karri:** Then you have got co-work, which is the agentic interface wherein you can do a lot of work overall. So, I have done quite a bit of work that I needed to do on Co-work already, and you should be able to see, you know, the tasks which I have done, and I'll give you a demonstration of what tasks I have done on

[00:50:49] **Dileep Karri:** Co-work also.

[00:50:50] **Dileep Karri:** So, co-work is more like I can work on different folders in my system and get actual, real work done. That is what co-work is.

[00:51:00] **Dileep Karri:** Code is for, you know, trying to build any kind of coding, so I do quite a bit of work on code, but as you can see, this is meant more for developers. Non-developers can also use it. It is not that non-developers cannot use it, but for non-developers, the easier way to get started is via co-work.

[00:51:21] **Dileep Karri:** Okay? And therefore, there are other... the design mode is something that you could see only inside the web interface. So, let me share my screen and show you that also.

[00:51:39] **Dileep Karri:** So, on the web interface, as you can see, right, if I open this up, I have the chat. I have code, but I don't have co-work. Cloud code is available on the chat, you know, web. I can use via web, but if I want to, you know, work on, say, anything like

[00:51:58] **Dileep Karri:** agentic plot co-work, I need to go on the desktop app.

[00:52:02] **Dileep Karri:** Now, if I want to work on something else completely different, then if I want to look at design, then this is the design one which is available, where I can use my design to build multiple things, etc, and all that.

[00:52:17] **Dileep Karri:** Okay, so I will give you a demonstration of design a little later, but these are the four modes. One is Claude, you know, chat, one is co-work, one is design, and other is, code.

[00:52:31] **Dileep Karri:** So, folks, are we clear so far with the respective modes and when to use each one of them?

[00:52:37] **Dileep Karri:** Are we clear with the modes? I will show some examples, but first I wanted to understand if everybody's clear with the modes of the same.

[00:52:46] **Dileep Karri:** Okay? Now, as we kind of go with respect to the different modes which are available, right, what I want to kind of mention very, very clearly is

[00:53:00] **Dileep Karri:** people directly jump into, okay, let me do this, let me do that, and directly jump into the tasks, but you have to build your fundamentals very, very clearly. If you don't build your fundamentals properly, you will, you know, lose the thing.

[00:53:14] **Dileep Karri:** Right? And that's why I'm spending time into walking you through the various modes and the fundamentals of Cloud.

[00:53:21] **Dileep Karri:** Now, which mode for what? As I said, if you ask a question, get an answer, it is chat. Run a multi-step co-work. If you want to mock up a design system or something like that, that is, design, if you want to work inside the code base, it is on code.

[00:53:38] **Dileep Karri:** Okay? Now, we will... I have quickly shown you how you can switch between the different modes

[00:53:44] **Dileep Karri:** And what are the different modes which are available?

[00:53:47] **Dileep Karri:** the thing...

[00:53:48] **Dileep Karri:** The first pro tip that I want to give you is, don't pick up a tool, pick up a mode.

[00:53:55] **Dileep Karri:** A lot of beginners keep asking, should I use Claude, should I use ChatGPT, etc. First, you have to understand what is the mode

[00:54:04] **Dileep Karri:** that I need for this particular task.

[00:54:06] **Dileep Karri:** Once I understand the mode, then I pick up the particular mode, and then I build it on top of that. So don't try to pick up a tool, try to pick a mode, and that is the important way to think about.

[00:54:18] **Dileep Karri:** For example, if you want to do some work on design, then you have to pick the design mode of Claude. You want to, you know, chat and get some questions answered, you have to pick the chat mode of Claude. You want to analyze some files on your folder and get some stuff done, you want to work with the co-work

[00:54:35] **Dileep Karri:** mode, right? That is exactly how you need to think. That's the first pro tip I want to share.

[00:54:41] **Dileep Karri:** Now, after modes.

[00:54:43] **Dileep Karri:** the next part, which is models. What are the different models, types of models, which are present inside, Claude, okay? So there are 3 types of models.

[00:54:55] **Dileep Karri:** One is the Opus family, Sonnet family, and the Haiku family, okay? These are not about, are they good, are they bad, but these are about the size, speed, and the cost of the same.

[00:55:07] **Dileep Karri:** Okay? Opus is the heavyweight, it is the costliest. Sonic is the typical daily driver, Haiku is the sprinter, or it will get work done very fast.

[00:55:19] **Dileep Karri:** Right? So first, the way you should think about is, Opus is super slow, okay, but it is expensive, and it is also the smartest.

[00:55:29] **Dileep Karri:** So, if there is any kind of work that you have to focus on where you need to go inside depth, that is where Opus would make much more sense.

[00:55:38] **Dileep Karri:** Then you have Sonnet, which is, like, fast, smart, and balanced.

[00:55:43] **Dileep Karri:** Wherein, maybe, there is some thinking involved, some... there is execution involved, etc. For your typical daily work, Sonnet would be sufficient.

[00:55:53] **Dileep Karri:** And then you have the Sprinter, which is Haiku, which is cheap, instant, and it has been optimized for batch or volume work. And I'll explain what batch or volume work, what is a typical task that you would require to do at different places.

[00:56:08] **Dileep Karri:** Okay? Now, why am I talking about this? Because every...

[00:56:13] **Dileep Karri:** level of cloud, whether you're on the paid plan or on the free plan, they charge you in terms of usage, and once I show the usage, I will kind of talk to you about why that becomes important. So, the more heavier models you use daily, the more usage gets counted into your plan.

[00:56:33] **Dileep Karri:** So, if you want to make the optimum use of Claude, you have to be aware of which model should you use for which task, so that you have optimum usage, and you are not running out of any kind of daily limits. Now, people who have been using Claude, have you ever run out of daily limits? Type yes in the chat if you keep running out of daily limits in the, you know.

[00:56:55] **Dileep Karri:** On your cloud.

[00:56:57] **Dileep Karri:** Okay? Almost unanimously, everybody's saying yes. So, what I'm going to talk to you about is how you can optimize your cost in the right manner so that you do not run into all this daily limit problems that you are facing.

[00:57:13] **Dileep Karri:** Okay? So first, let us think about Opus. Opus is the slow, expensive model. It is available only on the free plan, but even on the free plan... sorry, it's available only on the paid plans.

[00:57:26] **Dileep Karri:** Pre-plan, you don't have Opus, but even on the paid plan, \$20 plan, if you're trying to use Opus, your usage gets over just like that.

[00:57:35] **Dileep Karri:** Okay? So, try to use Opus only when your stakes are very, very high.

[00:57:41] **Dileep Karri:** Now, how... what is the mental model for using Opus versus Sonnet? Because both are thinking models, okay?

[00:57:49] **Dileep Karri:** Think about this. If you're thinking hard in your brain about a particular problem, that means AI also needs to think hard about the particular problem, and that is where OPUS would be required.

[00:58:02] **Dileep Karri:** If your thinking is a little lesser, then that is where Sonic would be required. There is no thinking, it is simple mechanical work which does not require too much of thinking. That is where Haiku would be required.

[00:58:17] **Dileep Karri:** Okay? So, map it with your own brain effort. If, on your brain effort, are you doing work in terms of, hey, on terms of my brain, right, I am doing work, in terms of, I am doing very well, or I'm not doing so well.

[00:58:36] **Dileep Karri:** Right? In terms of the pressure on my brain. There is so much thinking I'm doing when I'm doing this versus lesser thinking.

[00:58:43] **Dileep Karri:** That is where I would use the models. For example, if I am deciding whether I should invest in one stock versus another, my brain has to do a lot of thinking to do that. So that is where I can put information and ask COPUS to decide which, you know, kind of

[00:59:00] **Dileep Karri:** What should be my investing strategy overall?

[00:59:03] **Dileep Karri:** When I have a lesser thinking task, wherein I am just calculating what is my income tax I have to pay in a particular financial year, now that is a very straightforward calculation, not much thinking, little tedious, but not thinking involved. Their sonnet would be involved.

[00:59:22] **Dileep Karri:** Now, if I have to write emails, if I have to reply to support tickets, there, there is not too much... too much of thinking, it is very mechanical work, it is just

[00:59:34] **Dileep Karri:** solving things easily, that is where Haiku could be involved. So where there is deep work, strategy, and hard coding, you should use Opus.

[00:59:42] **Dileep Karri:** Where, you know, if it is not too much, 80% of the time, you should be using Sonnet, because Sonnet is almost half the cost as Opus. It is fast, smart, and balanced. It is 80% as good as Opus, so use it only 80% of the time.

[01:00:00] **Dileep Karri:** Now, you might say, you know what, in my job, my... it is all heavy thinking only, so I have to use Opus only all the time. That means you need to go for a higher paid plan, which is Max.

[01:00:14] **Dileep Karri:** Okay, so if you're using the higher paid plans, that is where you need to use, you know.

[01:00:20] **Dileep Karri:** Opus, you can use more regularly, but if you're on the \$20 plan, you should use a mix of Sonnet and Opus, and the distribution is 80% your work is Sonnet, 20% should be on Opus, for you to, you know, manage your usage properly. If you are not

[01:00:37] **Dileep Karri:** Doing this, assume that your usage is going to be gone. Similarly, if you're on the free plan, right, for maximum usage overall, you should use 20% of Sonic and 80% of Haiku.

[01:00:51] **Dileep Karri:** then you are able to work with your usage. Don't try to pick Sonnet for everything. Start with default Haiku in free plan.

[01:00:59] **Dileep Karri:** On the paid plan, do default more of Sonnet, and 20% should be Opus. On the max plan, it is fine, unless until you are using too much and your usage is getting done, that is where you should, kind of look at that.

[01:01:13] **Dileep Karri:** And I would always suggest don't use adaptive modes or anything like that. Pick and choose your own models.

[01:01:20] **Dileep Karri:** Then finally, Haiku. It is cheap, it is instant, it is built for volume, it is useful for the batch work, and you should not burn Opus tokens over here.

[01:01:31] **Dileep Karri:** Okay? Suppose I'm doing a simple task, like read my email, get... grab some information. I will use Haiku. I will not use, say, Sonnet or Popos.

[01:01:42] **Dileep Karri:** Okay? So the pro tip here is default to Sonnet if you're on a paid plan, but default to Haiku if you're on a free plan. Switch to... on the free plan, you should switch to Sonnet only for the difficult stuff. On the paid plan, switch to Opus only for the difficult stuff.

[01:01:59] **Dileep Karri:** Right? The moment you switch over, your limit complaints will reduce. I won't say they will stop, but they will definitely be better than before.

[01:02:09] **Dileep Karri:** Okay? So, Haiku is genuinely useful for batch information. You want to summarize a PDF. You want to draft an email. You want to clean or write some emails or support this thing. You should use Haiku. Please do not use Opus at all.

[01:02:29] **Dileep Karri:** Okay? Now, the other things that you'll see are extended thinking and fast mode. So now, let me give you some demonstrations of the different modes overall.

[01:02:38] **Dileep Karri:** So, I go to cloud.ai, I'm defaulting on the chat, and here, if I open it up, I will see the various models. Now, there are two things.

[01:02:49] **Dileep Karri:** I have Opus models, I have Sonnet, and I have got Haiku 4.5, and I have got Effort, which is low, medium, high, extra, and Max.

[01:02:59] **Dileep Karri:** Okay? And I can turn on extended thinking, where I want to think deeper for more complex tasks.

[01:03:07] **Dileep Karri:** Right? So now, I will take the stock kind of a thing overall, and I will use, because stock picking is definitely something I want to, you know, have some extra thinking, so I will work on extra

[01:03:22] **Dileep Karri:** And I will also add the extended thinking over here. So, I will choose the extra as a higher level of thinking, so it'll put more effort. It will put more effort, but it's going to be very slow, and I'm going to turn on extended thinking also.

[01:03:38] **Dileep Karri:** So now, let me show you a demo of this.

[01:03:42] **Dileep Karri:** I am a first-time stock investor. I am thinking of, you know, picking 2 to 3 stocks in India for safe investment. For my first set of stock investments, I want to pick

[01:03:56] **Dileep Karri:** steady stocks, like, you know, Reliance and, other things. Can you, help me, you know, if I have to pick Reliance as my stock, can you tell me whether it is the right stock pick, and why it is not the right stock pick for me?

[01:04:15] **Dileep Karri:** So, I'm asking a question on stocks, okay? So, I will... I have used the extra and thinking mode.

[01:04:24] **Dileep Karri:** Okay, so there is this thinking part, right? You should always open the thinking part. So now look at how Claude is thinking underneath it.

[01:04:32] **Dileep Karri:** It is saying it's a financial advice question, so I need to be careful to provide factual information. Okay, the real tension is it is asking about individual stock picking as a safe first-time investment approach that is actually concentration risk.

[01:04:45] **Dileep Karri:** So I should give a different information. I will structure this by leading with the uncomfortable truth, even with quality companies. The core issue is concentration risk.

[01:04:55] **Dileep Karri:** etc. If you want to be a better user of any AI, open up the thinking, don't ignore it when you're using it for the very first time.

[01:05:06] **Dileep Karri:** Use the better... you open up the thinking.

[01:05:09] **Dileep Karri:** Look at the recommendations given on the thinking side of it, so that you understand how the model is thinking.

[01:05:17] **Dileep Karri:** When you know how the model is thinking, after 10, 20, 50, 100 conversations you have with the model, you will understand how the model exactly thinks, and you can prompt it better.

[01:05:29] **Dileep Karri:** Okay? Prompting then, you don't even require to go with a prompt formula, you just give adequate context, and it'll pick it up.

[01:05:37] **Dileep Karri:** So look at this. It is now structuring the context, it is now doing the research, it has gotten what it requires.

[01:05:44] **Dileep Karri:** It is now, trying to figure out what is the kind of advice that I need to get. Okay, now it is saying the problem isn't reliance, it is the strategy. First time, investor wants safety.

[01:05:56] **Dileep Karri:** You already run index SIPs, so you can kind of do with this.

[01:06:01] **Dileep Karri:** and what safe equity exposure means. So it is giving me an investment thesis overall, which, you know, kind of, is helping me to kind of decide which stocks to pick up, etc, and all that. So it is saying, simple core index plus 4 learning stocks

[01:06:19] **Dileep Karri:** starter framework with the sizing, so that I can pick it up from there and try to do my stock investing strategy. Again, not a financial information, but if you were to brainstorm with Claude, I would always suggest to go with 4.8, with extra thinking mode, etc.

[01:06:37] **Dileep Karri:** Now, I go to a different chat, which is my daily kind of information that I want to do. It is a simple task that I want to do, right? So here, I will not use Opus, I will use Sonnet.

[01:06:50] **Dileep Karri:** And I can use, you know, effort to be high. It is fine.

[01:06:55] **Dileep Karri:** Okay? It takes longer, but uses the limits faster. But in case you are doing a simple income tax calculation, you can use even medium, and if there is a complex task insights on it, you can try to go with this. So here, I can say.

[01:07:12] **Dileep Karri:** I have a friend who has a, you know, yearly CTC of

[01:07:19] **Dileep Karri:** around 16 lakhs per annum. He wants a proper, you know, investment strategy so that there is, you know, less income tax, you know, effect on him.

[01:07:34] **Dileep Karri:** So, can you suggest some income tax saving strategies overall for my friend?

[01:07:42] **Dileep Karri:** Okay? So, for income tax, this doesn't require too much of thinking. There are well-laid income tax rules already. So, how to save income tax is a very basic thing.

[01:07:54] **Dileep Karri:** So, step one, regime, which regime, etc, and all that, right? Then, here, when old... when new regime wins, when old regime wins.

[01:08:03] **Dileep Karri:** what is a practical verdict? What are the tax levers which are kind of available with respect to this, and it is giving me all of the information that I require to make those decisions, and for this, SONET is more than sufficient. I don't require to go into Opus for this.

[01:08:24] **Dileep Karri:** Okay? Now, this is not to, you know, kind of, you know, work... it's not a replacement for tax strategy, but for people who have very simple tax structures, and they want to get a ready-made information, this could be a great way to do the same.

[01:08:42] **Dileep Karri:** Next, I will show you Haiku, where Haiku would be, you know, very, very important. I don't require deep reasoning if I want to do a simple task. Suppose I want to write some emails, okay?

[01:08:57] **Dileep Karri:** write an email to Funny, scheduling a meeting, for the, you know, for,

[01:09:04] **Dileep Karri:** in the next two days, wherein, you know, I want to check with him, if he's open, overall, for a meeting, for... discuss how the mastermind sessions have been going on. So, I want to, you know, remind Funny to set up a meeting in the... over the next few days for the same.

[01:09:26] **Dileep Karri:** I'm just putting a dump of this thing.

[01:09:29] **Dileep Karri:** And, always try to make the corrections.

[01:09:35] **Dileep Karri:** And there you go. And by the way, if people have been wondering, I've been using Whisper Flow to do this.

[01:09:42] **Dileep Karri:** Okay, it is asking me some questions, right? I can say...

[01:09:47] **Dileep Karri:** I am, like, a collaborator with Funny on this, on Outskill, and typically the meetings are initiated mutually. Sometimes I do, sometimes Funny does.

[01:10:00] **Dileep Karri:** And the mastermind sessions are a recurring thing, I just want to do a kind of a usual kind of thing, and the... what I'm trying to do is a simple pulse check.

[01:10:10] **Dileep Karri:** Even if not a meeting, at least an email would suffice.

[01:10:17] **Dileep Karri:** You see here, once I change funny the spelling, it kind of did this. That is what Whisper Flow does.

[01:10:23] **Dileep Karri:** Okay? So now it says, hi funny, wanted to check in on how the mastermind sessions have been tracking, nothing urgent. Just a quick thing to see what's working and what isn't, and if there is anything we should adjust. Okay? Very simple thing overall.

[01:10:37] **Dileep Karri:** Now, there is something more that you can, kind of do inside, right?

[01:10:44] **Dileep Karri:** And that would be something called style.

[01:10:47] **Dileep Karri:** Okay? We will see style later, but because we are working on emails, I wanted to kind of introduce what style is. Style is... here, it is a normal email. Now, suppose I want to make it more formal overall, okay? I check formal, and I'll say rewrite

[01:11:06] **Dileep Karri:** the email.

[01:11:09] **Dileep Karri:** Now, I want a formal tone on this email.

[01:11:15] **Dileep Karri:** Okay? You see here, I wanted to reach out and see if you have got capacity for a brief conversation.

[01:11:21] **Dileep Karri:** See, here it was wanted to check in on how the mastermind sessions have been doing. Here, it has become, see if you have capacity for a brief conversation, do a quick pulse check. If a call works better for you, I'm flexible on timing, or thoughts via email would be equally helpful.

[01:11:36] **Dileep Karri:** So, it has kind of stayed more formal because of the formal style that I have picked. We will see more about styles later, but that is how you do, right? Keep switching the models, and based on the intensity of the task, you should go deeper.

[01:11:52] **Dileep Karri:** Alright, folks, are we clear so far? Did we understand where to use Opus, where to use Sonnet, where to use Haiku overall? That will easily, you know, help you in terms of the session limits.

[01:12:09] **Dileep Karri:** Okay? It can easily help you, typically in terms of the special, in terms of session limits, and you don't have to worry further about that.

[01:12:19] **Dileep Karri:** Okay? Now, there is another mode inside Opus called Fast Mode. That means it will think hard, but give it to you fast, but it is almost double the amount of usual Opus tokens for me. So, if you are not on Max Plan, don't use Fast Mode.

[01:12:36] **Dileep Karri:** Okay? If you're on max plan, you can use fast mode, but if you're not on max plan, you should definitely not use, you know, this mode. Extended thinking, you can use it on other modes also, but I feel extended thinking makes sense only for Sonnet and Opus. It doesn't really make sense for Haiku.

[01:12:56] **Dileep Karri:** Okay? Haiku is more like a quick-thinking one. If for a quick-thinking model, why do you want to add an extended thinking layer?

[01:13:03] **Dileep Karri:** Keep it only for Sonnet and Opus.

[01:13:05] **Dileep Karri:** Okay? Now, we have the tier overview. We have got 3 pricing plans. One is free, which is, of course, free of cost. Pro, \$20 per month. Max, \$100 or \$200, based on the usage.

[01:13:19] **Dileep Karri:** If you are on the free plan, you have Sonnet with Limits, you have Haiku, but you don't have any other information. Pro, you have got all of this, but on Max Plan, you are able to use Opus more, better, and you can use Heavy Claude Code Use, or co-work use if you want, you can do it on the Max Plan.

[01:13:40] **Dileep Karri:** Okay? So now, all, this inside the workspace, what are the few other features that you can work with?

[01:13:48] **Dileep Karri:** Right? I will now go deeper inside the different things that we can work with, and one of the first things that we have, we are going to understand are projects, memory, and past chats.

[01:14:00] **Dileep Karri:** Okay? So we have got projects, memory, and the searching of the past chats, and I'll show you, I'll demonstrate to you how this would, you know, kind of work.

[01:14:11] **Dileep Karri:** Okay, so let me kind of remove this.

[01:14:14] **Dileep Karri:** So, projects are here, okay? If I click on projects, you will see some multiple projects, etc. And I have made my LinkedIn Writer project, okay? Similar to how the custom GPT or the thing that you have seen yesterday, that is exactly the same thing inside projects, so let us see how it is.

[01:14:35] **Dileep Karri:** Okay? So, basically, the instructions I have given are the exact markdown instructions over here. So, in the instructions, I have given what is my role, the objective, the context, the instructions typically, and everything else. So, that is the instructions that I have set in project.

[01:14:53] **Dileep Karri:** Okay? In terms of memory, it tells me in terms of, you know, every time from the past chats, it kind of figures out what... how I'm using this project, what I'm doing, and it is surfacing that memory, and the files overall.

[01:15:07] **Dileep Karri:** Now, for LinkedIn Writer, I can, you know, use, Sonnet 4.6, because there is some amount of thinking which is required, and I will use on the effort high, because I want to kind of think about that.

[01:15:21] **Dileep Karri:** So, suppose I want to, you know, go deeper.

[01:15:26] **Dileep Karri:** Right? And I want to add a very nuanced post overall on LinkedIn, based on the latest Google's launches. That is the post I want to make.

[01:15:37] **Dileep Karri:** Recently, Google, in its annual I.O. event, has launched a bunch of products. I feel that they are in the right direction, but I think one substantial gap I see is

[01:15:51] **Dileep Karri:** They are so deeply ingrained in the Google ecosystem itself, they have not opened up to connectors outside, which is what Claude and ChatGPT have been doing very well.

[01:16:02] **Dileep Karri:** or both Cloud and ChatGPT have opened up to external connectors very well, while Google is only stuck with the internal Google tools itself. Even if they have the support, they are not yet coming out properly with saying that we have given that support, etc. And that is the part.

[01:16:21] **Dileep Karri:** The other frustrating thing I find with Google is that they have a lot of overlapping product... products.

[01:16:28] **Dileep Karri:** Right? The same, they have similar products. Like, there is Google AI Studio and Anti-Gravity. What is the differentiation between the both? It is very tough to kind of imagine, because AI Studio also builds products, Anti-Gravity also builds product.

[01:16:43] **Dileep Karri:** who should use which one, when should we use, that is a little bit confusing, which is not clarified. So I want to build a nuanced post on top of this.

[01:16:52] **Dileep Karri:** So, I'm kind of giving this entire information, and now I'll give this project this thing. So, my LinkedIn writer will go through this information and write this project for me.

[01:17:02] **Dileep Karri:** So, for your project to work very well, there are a few things you need to understand. I will talk to you later about what are the settings you should definitely have.

[01:17:20] **Dileep Karri:** Okay? Google I.O. 2026 was impressive. It was also a masterclass onto how to overwhelm people into confusion. The good news, Google showed up. It has done multiple things. The connectors gap is real and understated. So, Sundar Pichai promised Spark would connect to third-party tools in the coming weeks. Coming weeks, not today. Claude and ChatGPT already have live one-click MCP connectors.

[01:17:43] **Dileep Karri:** Google Cloud claims 100-plus connectors in development. The product overlap is killing developer clarity, and therefore, Google has two tools that can build AI-powered apps, AI Studio and Anti-Gravity. The difference is real. The communication of it is non-existent. The homepage clearly says, start with AI Studio, graduate to anti-gravity, and developers waste days choosing the wrong tool.

[01:18:06] **Dileep Karri:** So, folks, Do you think it's a very nuanced

[01:18:10] **Dileep Karri:** you know, a post that I can directly copy-paste on Google doesn't feel AI-written, right? It feels more human, yes or no.

[01:18:18] **Dileep Karri:** Right? It feels more human-written, everything, etc.

[01:18:23] **Dileep Karri:** Right?

[01:18:25] **Dileep Karri:** That is exactly what it is that we are doing.

[01:18:29] **Dileep Karri:** Okay? So now, you have to understand that projects, design, everything are on paid plans only, and that too.

[01:18:37] **Dileep Karri:** Cloud design is a labs feature. That is Anthropic's very testing feature overall. So it is not rolled out to everyone equally. So some of you might not see it. If you're not seeing it, do two things. Either update your app, or you have to wait until it is rolled out to you.

[01:18:55] **Dileep Karri:** Okay? So, for some of you, if you want to improve it, you can give it prompts and improve it further, but if you want to build the same LinkedIn writing system that you learned yesterday on a project, that is exactly what you could do on Claude Project overall. And a few tips on how to make Claude projects work very well.

[01:19:15] **Dileep Karri:** Okay? One thing you should try to do well is, every time, give context on who you are as a person. Okay? Very, very important. Who you are as a person becomes very important, because in projects, if you see, in the LinkedIn writer, I have given this who I am as a person.

[01:19:34] **Dileep Karri:** So, what do I do? What are the kind of things I do? What are my key learnings and principles? That is something that I have already given as part of memory. I'll talk about memory later on, but

[01:19:46] **Dileep Karri:** In terms of context, you have to give the role, the company, what you care about, how do you write, what is the voice, the tone, the words to avoid, etc. What are some reference docs you can work with, like a style guide, a brand book, etc? And what is your output preference? Do you want it to be

[01:20:03] **Dileep Karri:** formatted in a particular manner. If you see here, I have in the instructions, I have given most of it, like who you are, I have told LinkedIn copywriter narrative strategist, and you can say, you are a strategist, I am so-and-so, doing so-and-so and doing so-and-so work.

[01:20:20] **Dileep Karri:** Overall, then what is the objective? There is the objective. Then, what is the voice DNA? We have provided the voice DNA. What should be the output like? We gave the complete output of hook, context story, insight, application takeaway, and the CDA. How should the sentences be? Sentences less than 30 words, replace vague fillers, etc. All of that we have given. That is the good project

[01:20:44] **Dileep Karri:** Kind of instructions that you need to give.

[01:20:48] **Dileep Karri:** Okay? So, you can put your project instructions also, like, marked down, so if you have seen Custom GPT, it is exactly the same thing that you should do.

[01:20:59] **Dileep Karri:** Okay? Memory is something where, across your chats, Claude remembers what you do and how you are doing the stuff.

[01:21:07] **Dileep Karri:** Okay, so let me show you where your memory settings kind of lies. So you go to Settings.

[01:21:14] **Dileep Karri:** Okay, and inside settings overall, if you look at...

[01:21:22] **Dileep Karri:** capabilities. In capabilities, you can see memory.

[01:21:26] **Dileep Karri:** Okay? So, for example, here I have said, allow Claude to search for relevant details in past chat. So, what it does is, if you're chatting on a particular thing, it will reference a previous chat to understand what you have chatted and try to do this. Then it will generate memory from chat history, so that it can remember relevant context on the same.

[01:21:47] **Dileep Karri:** Now you can even view

[01:21:50] **Dileep Karri:** and manage memory properly. For example, if you open this, work context, personal context, top of mind, brief history.

[01:22:00] **Dileep Karri:** earlier context, long-term background, so I have given all of this memory to Claude.

[01:22:07] **Dileep Karri:** Okay, based on the chats that I have kept doing, it has kind of built this memory. So I can keep looking at this, and I can make the edits on top of it to kind of erase parts of the memory, or update parts of the memory overall.

[01:22:22] **Dileep Karri:** Okay? Then, if I want to import memory from other AI providers, if I say start import, it will give you the complete prompt.

[01:22:30] **Dileep Karri:** Okay? What are the prompt that is required? You can copy this prompt, and if you copy this prompt onto ChatGPT, then copy its output and paste the results over here and say, add to memory. Your entire ChatGPT memory, or your Gemini memory that you have been working on day to day, you can export it to Claude. So for people who want to make the switch from ChatGPT to Claude.

[01:22:54] **Dileep Karri:** This is the way to kind of do this. So that is what memory does.

[01:22:58] **Dileep Karri:** So, I'll tell you some interesting, you know, parts about memory, why I like memory. So, we... we can stay on Sonnet 4.6, we don't...

[01:23:09] **Dileep Karri:** need to do, you know, kind of anything else overall. And, you know, I can look at a lot of chats that I have, you know, kind of looked at overall in the past.

[01:23:26] **Dileep Karri:** Okay? So, I will, you know, try to think about it. Okay? I will say, Previously.

[01:23:35] **Dileep Karri:** I discussed with you about... You know... finding... So I'm... tech jobs... Any San Francisco.

[01:23:54] **Dileep Karri:** Can you... find relevant jobs... Again, based on... Who. I. Am.

[01:24:11] **Dileep Karri:** Okay? So, it is looking for relevant chats. I found the prior context. Last time, you have searched generative AI engineer in San Francisco, and you got a lot of results, given who you are.

[01:24:24] **Dileep Karri:** Overall, right? 12 plus years this, etc, and all that. The better fit buckets are AI Educations or Curriculum, developer relations AI update, forward deployed AI Solutions Engineer, Generative AI product, or GTM.

[01:24:39] **Dileep Karri:** These are the kind of, things that are, required, okay? So... You know...

[01:24:47] **Dileep Karri:** I think that's good.

[01:24:51] **Dileep Karri:** I am more... inclined.

[01:24:56] **Dileep Karri:** towards... GDM, and... forward... Deployed roles.

[01:25:12] **Dileep Karri:** So now it is doing this AI Solutions Engineer and forward deployed roles on this thing. So DICE that you see, it's a connector, okay? I will quickly show you connectors when you come to the section, but it is... I'm using an external connector to search for the jobs, so that I'm able to get those jobs that are required.

[01:25:33] **Dileep Karri:** So, strong, this thing, it is saying that there is this job called AI Solutions Architect, which is a remote job, which is, you know, that I had to scope is translate business problems to AI workflows, which is exactly, you know, something that I can do.

[01:25:49] **Dileep Karri:** Others is GTM store, this thing, operations, AI subject matter for GTM marketing, enabling teams on AI agents and, you know, workflow automation, then explicitly forward-deployed requirements.

[01:26:02] **Dileep Karri:** 50 to 70% coding, etc, and all that.

[01:26:07] **Dileep Karri:** Okay, so it has given me a bunch of jobs that I can reply.

[01:26:11] **Dileep Karri:** So, in a way, what is happening is, I have a memory built with respect to the, you know, across the charts of who I am. I have a previous chat where I had searched for a particular job, so it combined both and told me, hey, this is what you should do.

[01:26:29] **Dileep Karri:** So, not many people kind of use this, but let me tell you, this is a great unlock over all your capabilities. If you are able to do this, this is crazy overall.

[01:26:44] **Dileep Karri:** Okay? And, you can search your past chats like the way I have mentioned, and you can solve some very good problems across chats, across context overall.

[01:26:56] **Dileep Karri:** Okay, so I kind of did, like, a quick workplace tour wherein I showed you how to create the project, how you can, you know, do the memory toggle, and how you can search the past charts by typical topic.

[01:27:09] **Dileep Karri:** Okay? So, now we will go deeper into use cases in the next 15 minutes on what everything Cloud can do, and here I will go slowly and transition into the VIP coding part also.

[01:27:22] **Dileep Karri:** Okay, so in, what Claude can do is it can go and do a bunch of stuff, especially long context.

[01:27:30] **Dileep Karri:** If you've got a whole book, whole code base, or multiple PDFs at once, Claude can be really helpful there. It is very helpful in this case, and

[01:27:42] **Dileep Karri:** The other things it can do is vision, it has got eyes, web search, it can search with citations, it can do artifacts, it can do data analysis, there is voice mode, and there is computer voice.

[01:27:54] **Dileep Karri:** Now, quickly, in the next 15 minutes, right, I will go through each of these capabilities and show you what Cloud can really do.

[01:28:04] **Dileep Karri:** Alright, before I move there, just want to take a quick pulse check. Everybody following so far, understanding, are you trying to get the understanding of what is the power of Claude that is able to do, right? It is able to do multiple things, so I wanted to show you the entire power of Claude overall.

[01:28:27] **Dileep Karri:** Okay?

[01:28:28] **Dileep Karri:** Now, we will go use case by use case, step by step.

[01:28:32] **Dileep Karri:** Now, long context. What is long context? That means if I got PDFs running to hundreds and two hundreds of pages, if I use any short model, I would, you know, it will lose the context right away.

[01:28:47] **Dileep Karri:** So what Claude does is, on the Opus model, it gives me 1 million tokens, and 1 million tokens, if I have to explain what is 1 million tokens, one...

[01:28:57] **Dileep Karri:** million?

[01:29:00] **Dileep Karri:** tokens.

[01:29:02] **Dileep Karri:** Is equal to, or approximately equal to.

[01:29:07] **Dileep Karri:** 750,000 words. 1 million tokens is equivalent to 750,000 words, so that means.

[01:29:15] **Dileep Karri:** multiple, multiple PDFs can be used, and they are available to kind of summarize or use the PDFs overall.

[01:29:23] **Dileep Karri:** Now, for example.

[01:29:25] **Dileep Karri:** I want to kind of look at a recent IPO, which is a KIST IPO. So, Kisht is a company which is an IPO, which it was kind of done.

[01:29:35] **Dileep Karri:** And they have, you know, they have kind of published their DRHP, or their Draft Red Herring Prospectors, which is telling investors about, how Kisht has been doing, what has been the work it has been doing, etc, okay? One simple use case.

[01:29:53] **Dileep Karri:** Look at this, it is 440 pages.

[01:29:56] **Dileep Karri:** Now, as a human, reading 440 pages is close to impossible, and you put it in any small model, it will give up even before it tries to build it out. So let me download this

[01:30:09] **Dileep Karri:** model, this completer document, right? And now, I want to work on this document. So, I go to this.

[01:30:18] **Dileep Karri:** Here, I would need Opus 4.8, because I need that extra 1 million context.

[01:30:24] **Dileep Karri:** And then I will attach the file.

[01:30:29] **Dileep Karri:** Okay, so let me see the file...

[01:30:41] **Dileep Karri:** Give me a second...

[01:30:52] **Dileep Karri:** So, I'm attaching this particular file onto Opus.

[01:30:57] **Dileep Karri:** here, effort, extra. I don't require extra. I... or actually, medium is also sufficient, because I just want to answer questions based on the PDF.

[01:31:08] **Dileep Karri:** I am actually trying to, you know, apply for this IPO and buy some shares of this company. Can you do a quick analysis and give me a summary of its basic financial health so that I can take an informed decision on the same?

[01:31:29] **Dileep Karri:** Okay, so now this entire 440 pages, my Claude can absorb because of its 1 million context, which is present inside Claude.

[01:31:39] **Dileep Karri:** Okay? Now, I'll tell you one more beautiful thing that Claude has. I don't have to wait until the task is completed.

[01:31:48] **Dileep Karri:** This is happening. I can open a new chat and start something else.

[01:31:53] **Dileep Karri:** I don't have to, you know, keep checking on what is happening in a previous chat. I can do things in parallel. So now, we will try to do multiple things in parallel and show you this capability of, you know, this cloud of running things in parallel on each window.

[01:32:14] **Dileep Karri:** So, next, we will talk about vision, about what Claude has with respect to the eyes, and here, what I will try to do is, I will want to critique my particular website, okay? Problem statement, very clear. I have got my website, outskilled.com.

[01:32:33] **Dileep Karri:** Okay? I've got this website, Outskill.com, and I have people, you know, who are going through this website and signing up for my mastermind. I want to improve this. So for that, I want to see how I should be able to improve this complete website overall.

[01:32:51] **Dileep Karri:** I need to critique this website.

[01:32:53] **Dileep Karri:** So for that, what I'll do is, I will take the screenshot of this complete website using the GoFull Page Chrome extension.

[01:33:03] **Dileep Karri:** It's a free Chrome extension. Go Full Page is a free Chrome extension, so I kind of take the screen capture of GoFull Page completely, so that I am able to capture this. I will save it.

[01:33:17] **Dileep Karri:** It is saved on my desktop.

[01:33:20] **Dileep Karri:** Okay? Now, come back to Claude.

[01:33:24] **Dileep Karri:** attach these screenshots that I have taken.

[01:33:42] **Dileep Karri:** I am attaching the screenshots that I have just taken.

[01:33:49] **Dileep Karri:** Okay? Now that I have attached the screenshots, I will say.

[01:33:53] **Dileep Karri:** This is my outskill website, where currently, out of 100 people who visit the website, 5 people are signing up for the mastermind. I want to increase it from 5 people to 10 people, so do a proper critique across the design, the copy, the sections, every other thing that you can think of.

[01:34:15] **Dileep Karri:** And tell me the complete critique of this website on the chat.

[01:34:22] **Dileep Karri:** Okay? Now, what I'm doing is, I'm doing critique, therefore my effort should not be medium, the effort should definitely be extra over here, because it is a critique that I'm doing step-by-step, so my effort has to be on the extra side.

[01:34:37] **Dileep Karri:** And I will ask it to tools.

[01:34:40] **Dileep Karri:** Okay, so now it is doing the critique of my website directly, looking at the website screenshots and building it out for me.

[01:34:52] **Dileep Karri:** Right? Now, I can go back and suppose I want to do another task, which is web search.

[01:34:58] **Dileep Karri:** Okay, so if I want to do a web search.

[01:35:01] **Dileep Karri:** Right? I'll create a new chat.

[01:35:03] **Dileep Karri:** For web search, I have to click on plus, and this is web search.

[01:35:07] **Dileep Karri:** So when I click on plus, and this web search is active, that means the web search is completely active for any of the things that have happened.

[01:35:16] **Dileep Karri:** So, on web search, I will say.

[01:35:19] **Dileep Karri:** Recently, Claude has released a bunch of features. Can you quickly summarize

[01:35:26] **Dileep Karri:** those set of features released by Claude.

[01:35:30] **Dileep Karri:** So, because this is latest information, right, it is something that is present, in the chat. Here, Opus 4.8, not requires. It is simple getting together of features. Haiku is sufficient, and

[01:35:46] **Dileep Karri:** in Haiku, I don't require to put any effort. Haiku is... I'm doing summarization, so Haiku is sufficient. Are you able to see? I have three, four tasks running in parallel. One is doing this, the other is doing something else, and, you know, it is kind of doing etc. And look at this, super fast.

[01:36:04] **Dileep Karri:** It is saying that, there is, you know.

[01:36:09] **Dileep Karri:** Opus 4.8 has been, kind of built. Little hallucination has happened over here, that's okay, you can check it, right? And the product features, what has happened, the pricing, shift overall, and, you know, what is a real move, what has been kind of put across overall.

[01:36:29] **Dileep Karri:** Okay? So that is exactly what it has put in overall. Now, if you want deeper research.

[01:36:35] **Dileep Karri:** You want a deeper research because you feel that it is very, very shallow, you want deeper understanding. For that, you have to connect research, which is separately added, and you say.

[01:36:49] **Dileep Karri:** The same thing, kind of.

[01:36:53] **Dileep Karri:** Okay, can you quickly summarize the set of features released by Claude? This is deeper research which is happening.

[01:37:02] **Dileep Karri:** Like, what Perplexity does, it will do the same. So this is deeper research, which is going to, you know, do the complete research of the latest Claude releases, and tell you what all has been released and what has not been released.

[01:37:17] **Dileep Karri:** So, what we have done so far, we looked at long context.

[01:37:21] **Dileep Karri:** We looked at vision, we looked at web search, and we also looked at research of citations.

[01:37:28] **Dileep Karri:** Now, we will look at building a simple artifact.

[01:37:32] **Dileep Karri:** Okay? This is something you should have seen, but let me quickly revise how you can build simple applications inside, Clark itself, inside chat.

[01:37:45] **Dileep Karri:** It is income tax season for me, so can you create a simple income tax calculator in an elegant style like Apple?

[01:37:56] **Dileep Karri:** Overall, so that I can put in some of the parameters and see how much income tax I'll have to pay, or, you know, what are the optimizations that I could do with respect to income tax.

[01:38:11] **Dileep Karri:** Okay? So if I want to do a simple income tax calculator, I'll do this, and because I'm building a calculator, I will use Sonnet over here. Haiku won't help. Opus also I can do, but SONET is more than sufficient over here.

[01:38:26] **Dileep Karri:** So, I will go with the... this thing where I'll ask it to build an income tax calculator.

[01:38:36] **Dileep Karri:** So my income tax calculator is getting billed.

[01:38:40] **Dileep Karri:** In here, side by side, as I am building this income tax calculator, I also want to show you how good my tool is with respect to data analysis, okay? So, I will use a simple sales data set called the Walmart sales data set.

[01:38:58] **Dileep Karri:** This is the sales data set that I'm going to use, which is Walmart, wherein I have the store number, the date.

[01:39:06] **Dileep Karri:** The weekly sales that have happened, whether it is a holiday or not a holiday, the temperature, the fuel price, the consumer price index, and the unemployment rate overall at that point in time.

[01:39:19] **Dileep Karri:** Okay, so with this, I will try to, you know, kind of map the sales and see if I'm able to make a decent prediction

[01:39:28] **Dileep Karri:** of sales, or if I'm able to understand why sales have risen and fallen in a particular period overall. So, that is what I want to do.

[01:39:38] **Dileep Karri:** So, go back to chat.

[01:39:41] **Dileep Karri:** For data analysis, Sonnet 4.6 is sufficient. You don't require anything, big overall. So I'm attaching the Walmart sales data set over here.

[01:39:54] **Dileep Karri:** Now that I have attached Walmart sales data set, what I'll do is, I will give it a simple prompt.

[01:40:00] **Dileep Karri:** I am actually analyzing this sales data set for my chief sales officer. The key ask is to give him a dashboard view of

[01:40:11] **Dileep Karri:** Which sales are doing

[01:40:13] **Dileep Karri:** Why sales are improving, and why sales are declining at a particular point in time, and is there any correlation with the other factors that are mentioned in the data set? And are they making any kind of impact? Yes or no?

[01:40:31] **Dileep Karri:** Okay?

[01:40:32] **Dileep Karri:** So, S or no, are there kind of any making an impact?

[01:40:37] **Dileep Karri:** Do the analysis.

[01:40:40] **Dileep Karri:** And give a simple dashboard.

[01:40:46] **Dileep Karri:** onsetting... the above?

[01:40:50] **Dileep Karri:** So, I can... Show it... the Lion Boss.

[01:40:58] **Dileep Karri:** So now data analysis is also kind of happening in parallel. Now, if you ask me what is the best way to do work in Cloud, this is what I just demonstrated.

[01:41:10] **Dileep Karri:** I looked at 5 different tasks, and each of the tasks I started, and I'm not looking and staring at the screen to figure out whether the task has been done or not.

[01:41:21] **Dileep Karri:** I kept looking at everything, I kept starting different tasks and moving on. After some time, I'll go back and review all of the tasks, whether they have been done or not done, and what is happening over here.

[01:41:35] **Dileep Karri:** Okay? Now, there is a very good thing called voice mode over here, right? So let me show you this, and this is the voice mode that is available.

[01:41:46] **Dileep Karri:** Okay, so this is the voice mode that is available.

[01:41:49] **Dileep Karri:** Right? So, I think you have seen this demo earlier, but I'm just recapping this to kind of tell you what is the voice mode.

[01:41:58] **Dileep Karri:** And, yeah.

[01:42:05] **Dileep Karri:** Hello?

[01:42:08] **Audio shared by Dileep Karri:** Hey, good to hear from you, how's it going?

[01:42:11] **Dileep Karri:** Decent, act...

[01:42:13] **Dileep Karri:** Actually, what I want is, right, in the previous chat, you found some jobs for me. So, base is the jobs that you have found from me, right?

[01:42:26] **Dileep Karri:** I want back, I can do a...

[01:42:30] **Dileep Karri:** like, Bob, you'll pick up, and what the interview process is going to be looked like. And after every answer, you have to tell me whether how I have done in the answer, and how I have kind of performed.

[01:43:02] **Audio shared by Dileep Karri:** Right, so I want to be straightforward with you here. I don't actually have access to our previous conversation, or the jobs we found together.

[01:43:11] **Audio shared by Dileep Karri:** My memory system hasn't picked up those details yet, so I'm starting fresh on this one.

[01:43:16] **Audio shared by Dileep Karri:** Here's what I'd say.

[01:43:17] **Dileep Karri:** So, voice mode, I just wanted to give you a quick demo of the same. One quick hack I have found is you can install Cloud on mobile also. So, when you're taking walk, right, if you want to do, like, a brainstorm, everything, voice mode really helps in that case. So, whenever I go for walks.

[01:43:35] **Dileep Karri:** I plug into voice mode of Claude. Even ChatGPT's voice mode also will suffice. I keep switching models based on how I would like, and you can use this same.

[01:43:46] **Dileep Karri:** Okay?

[01:43:47] **Dileep Karri:** There is one more thing which is, you know, an intelligent assistant inside this. I will show it to you a little bit later. For now, what we'll do is, we have kind of started multiple threads.

[01:43:59] **Dileep Karri:** We will look at those multiple threads and see what has happened, and take a look at the review. First, our IPO analysis.

[01:44:08] **Dileep Karri:** So it has done everything, and it has given me the 3-year financials. It has given me why revenue fell while the book grew, etc.

[01:44:20] **Dileep Karri:** What are the management-stated reasons? What is genuinely healthy? Risks you didn't ask but should price it in, bottom line for your decision, right? Any detailed risk factors that you need to pull in, etc. Four 40-page document, where you'll not have time to read, you can actually read it via Claude.

[01:44:38] **Dileep Karri:** Then, recent feature releases, we did a simple web search. We got the feature released, but the problem is it released something called Sonnet 5, which actually was not released at all.

[01:44:49] **Dileep Karri:** Okay, so this was a hallucination.

[01:44:51] **Dileep Karri:** So let us look at the recent release that is there. If you see, it is still kind of building that, and almost 7 minutes, 52 seconds have been done, and it is still not done. So if you open it up, it'll show you that 158 sources have been gathered. It is showing that they have kind of used, introduced adaptive thinking, 1 million token window, 128K output support.

[01:45:15] **Dileep Karri:** And, it is trying to check more such things overall.

[01:45:20] **Dileep Karri:** then improving mastermind sign-up, right? It is kind of asking me some questions.

[01:45:27] **Dileep Karri:** what is going to happen, Tier 1, Tier 2, Tier 3, all of that. Now, if I want to change some things and go ahead and do that, I should be able to do that. We will come back to this, because this is a task I will pick up further and actually build website on top of this.

[01:45:44] **Dileep Karri:** Income tax calculator.

[01:45:49] **Dileep Karri:** Okay? I think some error happened.

[01:45:53] **Dileep Karri:** Right? It's okay. So let us restart the task.

[01:46:14] **Dileep Karri:** Sometimes Claude, you know, kind of hallucinates and goes into error, so at that point in time, you have to redo the task overall, okay? So that's this thing. We will leave this thread as is. We will go check over here.

[01:46:29] **Dileep Karri:** I think same thing happened. I will just say resume.

[01:46:34] **Dileep Karri:** Right, so periodically, I'll have to go and... Check, this thing.

[01:46:42] **Dileep Karri:** I say am I meant?

[01:46:44] **Dileep Karri:** Resume the task.

[01:46:47] **Dileep Karri:** So I'll have to tell you, confess to you something. So, there is this, status.claw.com. If you see here, over the past few days, there have been a lot of errors in Claude.

[01:46:59] **Dileep Karri:** And that is why, every day, every 2-3 days, there are some errors that we have seen in terms of clot, because it is scaling quite a bit, and because of the scale that is happening, there have been a lot of errors which are happening on Claude.

[01:47:15] **Dileep Karri:** So, therefore, that is something you'll have to bake in when you're using Claude. It is not as stable as here.

[01:47:23] **Dileep Karri:** Okay?

[01:47:24] **Dileep Karri:** Let me see, income tax calculator, has it done?

[01:47:30] **Dileep Karri:** There you go, income tax calculator is ready.

[01:47:35] **Dileep Karri:** See, it is, picking my, some, gross, this thing. So, I'll say 20 lakh, new regime is better, or old regime is better. Any other income, like rental, freelance, etc, what is the age group? What are the deductions? Home loan interest?

[01:47:52] **Dileep Karri:** NPS, HRA exempt, other, deductions that are available, what is the tax, breakdown according to this? What is the slab-wise tax? Current deduction looks maxed, NPS 80cc, if not already done.

[01:48:07] **Dileep Karri:** Okay, so it is saying indicative only, verify with the CA for a final filming. So, this has been done. So I can build these little apps for myself, and if I want, I can publish this and use it as a proper application later on.

[01:48:25] **Dileep Karri:** Okay, so what I'll do is, I will redo this task, because it has not picked it up properly.

[01:48:57] **Dileep Karri:** Give a dashboard which can answer the above.

[01:49:06] **Dileep Karri:** So I'm doing this now, it will do the analysis. I'll get 2 minutes over here, just so that, you know, I am confident that it has picked up this task, and it is doing this overall, and so if any error happens, we'll have to rework the same.

[01:49:34] **Dileep Karri:** So now, underneath it, it is doing the complete data analysis. It is doing the correlation on the holiday impact, the seasonality, and running various commands for the same.

[01:49:54] **Dileep Karri:** And it is building this everything that I require for doing this.

[01:50:03] **Dileep Karri:** So one thing you need to understand when using Claude is, it is always good to, you know, run things in parallel, but sometimes some tasks break, so you have to go back and, you know, kind of resume it and try to build this out totally. So it has analyzed everything, now it is building the complete dashboard and assembling the chief

[01:50:23] **Dileep Karri:** sales officer dashboard that I can show.

[01:50:41] **Dileep Karri:** There you see total revenue over 3 years. It is saying average weekly plus store by store, holiday sales lift. It is building the weekly sales trend. It is giving seasonality year over year.

[01:50:55] **Dileep Karri:** Store performance top 10.

[01:50:57] **Dileep Karri:** Bottom 10, external factor correlations, and now...

[01:51:01] **Dileep Karri:** It has designed this complete dashboard, and it is building this overall.

[01:51:07] **Dileep Karri:** So, it is a level up of the usual data analysis that you would see, and it will help you to kind of, you know, tailor-make your questions to what exactly you want to do. So, the pro tip here is, whenever you're doing any kind of data analysis in Cloud or any tool, first understand who your audience is.

[01:51:27] **Dileep Karri:** To whom are you presenting this data?

[01:51:29] **Dileep Karri:** and tailor-make or tweak your question or your prompt to provide context, saying that I am making this presentation for that particular person, and therefore, I want the dashboard to be tailor-made to answer the particular questions. Then, all you have to do is share this dashboard, or show this dashboard to the manager, and just explain the stuff. That would be sufficient. You don't have to go deeper into any of this.

[01:52:20] **Dileep Karri:** Okay, so now it is doing the, various calculations behind, everything, right? So now it is, built this entire thing. Look at this. Beautiful.

[01:52:31] **Dileep Karri:** it kind of picked up the weekly sales trend, and it marked what are the holiday weeks. The red lines are holiday weeks, and it saw that there's a quick correlation. Seasonality, multi, average sales, November and December are higher overall, right? And external factors versus

[01:52:50] **Dileep Karri:** Correlations versus unemployment, CPI, temperature, holiday flag, fuel price, it has shown. Store performance rating, it has mapped, and what is doing well, why sales improved, why sales decline, what the external factors actually do.

[01:53:06] **Dileep Karri:** Right? It is saying that higher unemployment modestly suppresses sales, makes Intuitive wise for a value retail context.

[01:53:14] **Dileep Karri:** Okay? So the chain is primarily a seasonal business. External macro factors are noise at the portfolio level. The real story is a 10x performance gap between the top and bottom stores, and that is where the strategic attention should go.

[01:53:29] **Dileep Karri:** That is a recommendation, the data is telling to the manager.

[01:53:35] **Dileep Karri:** Right? So now you see, right, over a particular variety of tasks.

[01:53:40] **Dileep Karri:** I can do so many things.

[01:53:45] **Dileep Karri:** Folks, how are you doing so far? In the past 15-20 minutes, I gave you a snapshot of the power of Claude, where I did a bunch of things overall.

[01:53:59] **Dileep Karri:** Right? I have shown the bunch of things that I have done, in terms of what all things that we could do.

[01:54:10] **Dileep Karri:** Okay? Now, we will... Go in detail into picking a very important task.

[01:54:18] **Dileep Karri:** Which is, we will make the transition right now into VIP coding.

[01:54:27] **Dileep Karri:** Okay? In white coding, what I'm going to do is, I am going to improve.

[01:54:36] **Dileep Karri:** the existing website.

[01:54:41] **Dileep Karri:** Okay? You are going to improve the existing website, and I'm going to pick up Outskill itself as a website, which I'm going to build and improve, that I'm going to do, and I'm also going to build a web application.

[01:54:58] **Dileep Karri:** from scratch.

[01:55:02] **Dileep Karri:** That too, with AI features.

[01:55:07] **Dileep Karri:** Okay? So, in the next 1 hour or so, I'm going to improve the existing website, which is OutSkills, and I'm going to build a web app from scratch.

[01:55:18] **Dileep Karri:** Right? Now, I will go back

[01:55:20] **Dileep Karri:** And I will show you one task that I started, and we will pick the start, task forward from there.

[01:55:29] **Dileep Karri:** You see here, It has given me a lot of critique on things.

[01:55:34] **Dileep Karri:** that I need to improve.

[01:55:37] **Dileep Karri:** For my website.

[01:55:38] **Dileep Karri:** So now what I'll tell is...

[01:55:42] **Dileep Karri:** Take the critique that you have given, and if you can do the look at the critique overall, take the critique that you have given, and go deeper, and write for me a complete new website from scratch, and write it to me in the form of a markdown.

[01:56:05] **Dileep Karri:** Okay? So now, I'm trying to take the critic, go deeper, and, you know, kind of do a completely new website from scratch, and write it to me in the form of a markdown.

[01:56:15] **Dileep Karri:** So that is what I'm going to do over here.

[01:56:21] **Dileep Karri:** So, the Markdown formatting that you learned yesterday, it is the exact same formatting that I'm using, where I'm asking Claude, because you have done the critique, you can go back and, write.

[01:56:32] **Dileep Karri:** Another pro tip over here, when you make Claude think, right, always allow to expand its thinking first, and then put the limits. What we require here is a simple kind of prompt, right? But for a simple prompt, you don't directly say, I want a prompt.

[01:56:52] **Dileep Karri:** First, give it a free hand for allow it to think, and allow it to write as much text as possible, then put the restrictions, because then your quality of your output improves.

[01:57:04] **Dileep Karri:** If you just allow it to build everything, etc, all that, your quality would not improve, but if you are kind of looking at something deeper, and you want some very nuanced takes on things, allow... give freedom first, and then put the constraints. Don't put the constraints right away.

[01:57:22] **Dileep Karri:** Especially in this type of tasks, where you'll be putting extra thinking, because it will surface some blind spots, which even you wouldn't have known.

[01:57:32] **Dileep Karri:** Okay? So, if I see about this...

[01:57:45] **Dileep Karri:** So, it will take a bit of time to think, it is okay. Let us kind of wait for the thinking to kind of complete.

[01:58:11] **Dileep Karri:** Now, if you feel that, okay, my Claude is not working, what should I do? So, I will give 2 minutes to Claude to kind of figure it out and resume from here and, you know, give me the output, but in case Claude is failing for me, I have nothing to worry. I can replicate the same workflow in ChatGPT also. It would decently work.

[01:58:33] **Dileep Karri:** Okay, so now it is kind of picking the thinking. So, comprehensive markdown document, so it is now thinking through the strategic approach.

- [01:58:40] **Dileep Karri:** which should be a dedicated landing page for the free 2-day GenAI Mastermind, with one clear goal, that is sign-ups, no competing navigation, no catalog links. The page needs to be mobile-first, tight, punchy, and since it's a free offer, it is credible enough.
- [01:58:56] **Dileep Karri:** Okay? So now, the build first, rational second. So the new page removes the trust killers, but stays persuasive. I will not... I did not turn this into a monk mode honesty manifesto. I will not fabricate your proof. Everything is going to be picked up. This is the A in the A-B test, not the answer, right? Let me write the complete document. So if you see here, it is now crafting the complete new
- [01:59:21] **Dileep Karri:** Outskill master page, landing page as a markdown spec.
- [01:59:25] **Dileep Karri:** Or the document overall.
- [01:59:45] **Dileep Karri:** Okay, so now what I'm doing is, I'm taking the critique done by Claude, and I'm asking it to rewrite the complete landing page itself.
- [01:59:54] **Dileep Karri:** So, this is the first level, where I'm asking it to write the complete markdown spec.
- [02:00:00] **Dileep Karri:** And, initially, you know, it is better if you are able to go through this yourself. So, we have got the complete, you know, landing page version 1, which is the new landing page overall. Now, this is the part you should pay attention to. Look at this.
- [02:00:17] **Dileep Karri:** convert the V1 landing page markdown that you have written into another markdown, which is a copy and paste prompt that I can paste into Cloud Design and build the front end of this website.
- [02:00:35] **Dileep Karri:** Okay, so now I am asking it to convert this Markdown landing page into another Markdown, which is a copy and paste block. Then what it does is, it kind of looks at all of this information.
- [02:00:48] **Dileep Karri:** it will pick only the real elements which I need to do, and those real elements will be used to write the complete prompt, which I can then copy-paste into my Cloud design.
- [02:01:05] **Dileep Karri:** Okay, as it is doing, let me show you Claude design, how you should work with it, etc. In Cloud design, the first thing you need to build is a design system.
- [02:01:15] **Dileep Karri:** Okay? So I have built outskilled design system over here, okay? And if you look at Outskilled Design System, the outskilled Design System consists of all of how the AI presentation decks would look like, how the marketing side would look like in terms of the UI kit.
- [02:01:33] **Dileep Karri:** Right? It is going to show you the logo, how the logo is going to look like, it is showing the brand colors, the semantic colors, the surfaces, etc, etc, and all that.
- [02:01:45] **Dileep Karri:** Okay? So, for creating a new design system, if you want to create a particular design system, it is a simple process. In design system, you can say, create a design system, and then, you know, give it specifications for your design, and it will create a new design system based on that.
- [02:02:05] **Dileep Karri:** In my case, all I had done was, I took the outskill.com screenshots, and I put it in the design system and asked it, analyze this, and build the new brand design system based on this. So it constructed the complete brand design system based on that.
- [02:02:21] **Dileep Karri:** This process of creating a design system takes easily 20-25 minutes, and it uses at least 20-30% of your usage.
- [02:02:31] **Dileep Karri:** So that is the drawback here. It is doing things very well, but it uses almost 20-30% of usage in a single shot, if you are trying to create a fresh brand design system.

[02:02:43] **Dileep Karri:** But creating a brand design system is a single task, or a single one-time thing. Once your brand design system is ready, you can keep using it as much as needed.

[02:02:54] **Dileep Karri:** Okay, so I already have the outskill brand design system, so now all I need to do is, I need to wait for my

[02:03:03] **Dileep Karri:** You know, design-build prompt overall.

[02:03:08] **Dileep Karri:** So this is the build prompt for, you know, cloud design.

[02:03:12] **Dileep Karri:** One way is, I can just go through this, and I can look at the, you know, the copy and, you know, make some changes. Otherwise, I can directly copy it.

[02:03:22] **Dileep Karri:** Go to Cloud Design.

[02:03:24] **Dileep Karri:** Okay? So here, there are multiple things, like prototype, slide deck, template, etc. What I'm building is a website prototype. Okay? So, I will call it...

[02:03:35] **Dileep Karri:** Mastermind.

[02:03:37] **Dileep Karri:** Website.

[02:03:39] **Dileep Karri:** I want to create it high fidelity, and I'll say, create.

[02:03:46] **Dileep Karri:** Now, I want to create this entire thing, so now I'll copy-paste the prompt, which I have done, and I'll use Claude Opus 4.8 only. That is good for this task.

[02:03:59] **Dileep Karri:** And I'll say send.

[02:04:02] **Dileep Karri:** Okay, so I am using Claude as my thinker, and Claude itself as my doer.

[02:04:08] **Dileep Karri:** So, for building my website, what I'm doing is, I'm taking my website critique, I converted it into a new landing page copy.

[02:04:19] **Dileep Karri:** That new copy, I converted it into a copy and paste prompt, and that copy and paste prompt, I am putting it into this design system and asking it to build the complete website.

[02:04:36] **Dileep Karri:** Right? So, this is how I will build the standard website. Now, it is going to ask me some questions, okay? So, I have to answer these questions.

[02:04:45] **Dileep Karri:** How should the sign-up form appear? I will say inline form, so that the CTA smooths go to the form section near the button.

[02:04:54] **Dileep Karri:** Build as a static HTML page or a React interactive prototype. I will say React Interactive Prototype overall. Do you want design, this thing to...

[02:05:06] **Dileep Karri:** Compare, explore a few hero variations.

[02:05:10] **Dileep Karri:** I think how many instructor cards, I'll say decide for me. It is basically any particular cards it, wants overall. So, basically, whether I should go 3 cards, 5 cards, etc, or I'll simply say 3 cards for instructors.

[02:05:25] **Dileep Karri:** Do you have real photos or logos to drop in? I will say all placeholders for now, I will fill later. Anything you want emphasized in the brief that you need to do one, lean a bit more premium or polished in the hero, and I'll say continue.

[02:05:41] **Dileep Karri:** So Claude Design, based on my brief, has asked me multiple questions, which I have answered, and now it is going to go ahead and create the React prototype that I want to use.

[02:06:01] **Dileep Karri:** Okay, so now it is going to read everything and build this website for me.

[02:06:06] **Dileep Karri:** So this is the way of building the website overall, in terms of doing this.

[02:06:15] **Dileep Karri:** Okay? Now you see here, it has kind of picked up the to-dos of what it needs to build, so it will start building each of these tasks step by step, and build the complete website for us.

[02:06:29] **Dileep Karri:** Alright, now let me go back and explain this entire process that we have done, so that everybody knows what we are doing over here. So, in this, the steps are, step one.

[02:06:41] **Dileep Karri:** take... screenshot.

[02:06:48] **Dileep Karri:** of the Outskill website.

[02:06:53] **Dileep Karri:** Or any website via... Go full page extension.

[02:07:02] **Dileep Karri:** Okay, that is the first thing you should do. Second thing you should do is critique Glaude.

[02:07:12] **Dileep Karri:** on all aspects.

[02:07:16] **Dileep Karri:** Ask Claude.

[02:07:19] **Dileep Karri:** to rewrite.

[02:07:23] **Dileep Karri:** the landing page.

[02:07:28] **Dileep Karri:** Based on the critique.

[02:07:34] **Dileep Karri:** Then, after I kind of pick up the, rewrite the landing page based on the critique.

[02:07:41] **Dileep Karri:** The next thing that I will do here is...

[02:07:44] **Dileep Karri:** you know, you rewrite, or convert.

[02:07:51] **Dileep Karri:** the... landing page.

[02:07:57] **Dileep Karri:** content, into... copy and... paste... Prompt.

[02:08:07] **Dileep Karri:** Okay, convert the landing page content into a copy and paste prompt.

[02:08:12] **Dileep Karri:** And... the prompt... on cloud design.

[02:08:23] **Dileep Karri:** on Choose and Design System.

[02:08:29] **Dileep Karri:** Okay, if you don't have a design system, you will need to create the design system beforehand.

[02:08:39] **Dileep Karri:** Okay, it is as simple as saying create, answering some questions, putting the URLs and screenshots, it will create the design. Now, what we have to do is, we have to wait for the prototype.

[02:08:53] **Dileep Karri:** Okay, so as the prototype is kind of getting built over here, let us go to the next task, which is building the web application with AI.

[02:09:05] **Dileep Karri:** So, I will start building a web application.

[02:09:13] **Dileep Karri:** with... AI And for this, again, I will use Claude as my architect, or thinker.

[02:09:26] **Dileep Karri:** Okay? To kind of think through this complete web application.

[02:09:31] **Dileep Karri:** So the web application I'm going to build is a AI-powered gallery... counter... application.

[02:09:48] **Dileep Karri:** Okay, so I want to build this AI-powered calorie counter application, which is something that I want to do. Okay, now let us look at the workflow of how I would build this step by step.

[02:10:00] **Dileep Karri:** Open a new chat.

[02:10:02] **Dileep Karri:** And here, I would definitely use Opus 4.8.

[02:10:06] **Dileep Karri:** And extra is not required, high effort is sufficient. I have not seen any difference from extra to high.

[02:10:15] **Dileep Karri:** Okay, so now I'm going to build this complete application.

[02:10:20] **Dileep Karri:** Over here. First, right now, what I'm doing is planning for the application.

[02:10:25] **Dileep Karri:** Now, one major mistake I see people do when they're building the web application is they do not plan properly.

[02:10:32] **Dileep Karri:** And because they don't plan properly, whatever web application that they build, they make quite some mistakes. So we are going to spend a substantial amount of time on the planning part, so that whatever web application we are planning to build, we are planning... we are building it in the right possible manner.

[02:10:50] **Dileep Karri:** Okay? So here we go.

[02:10:53] **Dileep Karri:** I am planning to build a web application, which is an AI-powered calorie counter application. So, for this, I want you to list the set of all possible features that I can build for this application.

[02:11:11] **Dileep Karri:** So, first step, try to list down all the possible sets of features that you can list for this application.

[02:11:33] **Dileep Karri:** So now it is trying to figure out the various feature categories for the calorie counter application, and it will try to build it out completely.

[02:11:48] **Dileep Karri:** Alright, in the meanwhile, we'll check on this thing.

[02:11:51] **Dileep Karri:** what is happening in our Mastermind website. So, it is still building it.

[02:11:57] **Dileep Karri:** I think it is... if you see here, it is becoming... it is writing the pages, it is writing the components, so it is actually doing all the coding, wipe coding by itself, so that we can build out this entire page overall.

[02:12:14] **Dileep Karri:** Okay, so I think we are almost there. It is kind of placing everything. It is now checking the screenshots of the same.

[02:12:35] **Dileep Karri:** Okay, anyway, come back here to see. Here you go. It has kind of talked about what is the food capture or logging.

[02:12:43] **Dileep Karri:** where photo recognition, menu scanning, recipe URL import, manual entry, etc. AI vision capabilities, design, like, you know, take a picture and capture the calories, etc. Tracking and analysis.

[02:12:57] **Dileep Karri:** Goals and planning, insights, coaching and behavioral, integrations overall, personalization and health modules, etc, etc.

[02:13:07] **Dileep Karri:** So it has given me the complete set of features. Now, whenever you kind of come to the complete feature set.

[02:13:21] **Dileep Karri:** you should first try to define what is your MVP.

[02:13:25] **Dileep Karri:** or minimum.

[02:13:29] **Dileep Karri:** viable.

[02:13:31] **Dileep Karri:** product.

[02:13:33] **Dileep Karri:** So, what is minimum viable product? Minimum viable product means that what is the amount of... minimum amount of features, so that my user can use the application.

[02:13:46] **Dileep Karri:** Okay? So let me ask you a question so that you can understand this better. Let us suppose you have just constructed a house, and you want to occupy the house. What are the bare minimum things you'll require in your house so that you can start living?

[02:14:03] **Dileep Karri:** Okay? And then you can get the other things done later. So what are the bare minimum things you'll require before you start living inside the house? Let me know on the chat the bare minimum things you'll require to kind of live inside the house.

[02:14:15] **Dileep Karri:** Okay, some people are saying furniture, even without furniture, I can, you know, put some mattress and live. It is fine without furniture. Electricity is important. Plumbing is important. Gas connection, optional. Even without gas connection, I can order via Zomato and Swiggy and still live inside the house.

[02:14:34] **Dileep Karri:** Right? Refrigerator also...

[02:14:37] **Dileep Karri:** optional, etc. So, if you see about it, right, I don't require furniture, I don't require a lot of things you are mentioning, I don't require kitchen also, okay? Basically, preparing the food I'll get from Zomato or Swiggy. I want basic electricity, I want basic plumbing so that I can use the washrooms and I can take care of personal hygiene. Then, one by one, I will get things into the home.

[02:15:02] **Dileep Karri:** and get it set up as I start living over there. So, basic utilities have to be available.

[02:15:07] **Dileep Karri:** Similarly, what are those basic feature sets I would require for my app to go into the hands of users? That is what we want to build, and that is what I need... I mean by MVP, or the minimum viable product that I want to build.

[02:15:23] **Dileep Karri:** So now, I will ask the next prompt.

[02:15:27] **Dileep Karri:** From this set of features, I want to build a minimum viable product. So, for the minimum viable product, tell me what are the two core features and the differentiator feature I can pick.

[02:15:40] **Dileep Karri:** And give me, in form of a table, different combinations of core features and differentiator features, so that I can pick up a set of features which I can use to start building my application.

[02:15:57] **Dileep Karri:** Okay? So I'm asking it to give a form of table on the chat.

[02:16:02] **Dileep Karri:** The different combinations of the core features.

[02:16:15] **Dileep Karri:** Right, now let us check on... This thing, what is happening?

[02:16:21] **Dileep Karri:** Oh, it's still building?

[02:16:26] **Dileep Karri:** So I think it's building the variations.

[02:16:34] **Dileep Karri:** So there you go. A basic thing is ready, but it is still kind of...

[02:16:38] **Dileep Karri:** Building it out overall, but you have the, you know, basic outskill, what it has done.

[02:16:47] **Dileep Karri:** The different things, all of it is...

[02:16:55] **Dileep Karri:** Available over here, right? So there are some placeholders which you can, you know, kind of use, right? But this is kind of available right now.

[02:17:05] **Dileep Karri:** Okay, let it finish, but I just wanted to show you that some variations are present, and it is all available right now.

[02:17:18] **Dileep Karri:** Okay, so it is giving me the classic AI photo play, where photo, meal, the technician, daily calorie dashboard with the Indian cuisine accuracy, then,

[02:17:31] **Dileep Karri:** conversational text or voice logging, daily macro dashboard, and what can I eat now, remaining budget, you know, suggestions, etc.

[02:17:41] **Dileep Karri:** So, what I will pick is photo to meal recognition. I like this. So, I'll pick photo mail recognition.

[02:17:49] **Dileep Karri:** I will pick up the daily, calorie macro dashboard.

[02:17:55] **Dileep Karri:** I will also pick conversational text or voice logging.

[02:18:05] **Dileep Karri:** Okay? And then, I will pick up this, what can I eat now?

[02:18:14] **Dileep Karri:** Based on the remaining budget overall.

[02:18:19] **Dileep Karri:** So I say, I want to build these features.

[02:18:25] **Dileep Karri:** as my minimum viable product, or MVP.

[02:18:30] **Dileep Karri:** make a... PRD... in Markdown.

[02:18:36] **Dileep Karri:** Of the same.

[02:18:37] **Dileep Karri:** So, PRD is nothing but product requirements document, which is a technical document that is being prepared to kind of build a particular application. So I'm building the technical document, which kind of describes in detail all the required features.

[02:18:56] **Dileep Karri:** And I'll add these extra points.

[02:18:59] **Dileep Karri:** For the photo recognition or any of the AI, I will directly use LLM itself. I don't require to use any other

[02:19:09] **Dileep Karri:** APIs or models, etc, I will directly use the LLM itself overall.

[02:19:17] **Dileep Karri:** Okay? So, once I do this, I will be able to create the PRD, but I will give you a secret sauce, which nobody knows. Okay? Not many people know about this, as to how you can elevate your design.

[02:19:31] **Dileep Karri:** To elevate the design, there is a site called superdesign.dev.

[02:19:37] **Dileep Karri:** So it's a free website. SuperDesign.dev is a complete free website, and it gives you options of different types of how you can have your websites.

[02:19:51] **Dileep Karri:** Okay, so it gives you different options of your website overall, and that is what it is trying to do over here.

[02:20:04] **Dileep Karri:** Okay, so I'm kind of looking at my different websites.

[02:20:18] **Dileep Karri:** Folks, give me a moment, my internet is glitching, I'll just, you know, switch to a different network. Just a moment, I'll come back in just a minute or so.

[02:20:55] **Dileep Karri:** Fan, are you able to hear me now?

[02:20:57] Phani Krishna - Outskill: Yes, yes, I can hear you now.

[02:20:59] **Dileep Karri:** Got it, look.

[02:21:01] **Dileep Karri:** Right. So now that I have this different kind of styles which I can pick from, I will need to go through each of those styles and understand which style resonates with me for the kind of application that I want to build.

[02:21:17] **Dileep Karri:** Okay? So, I keep scrolling, I keep scrolling to kind of look at a particular kind of thing that kind of, you know, speaks to me overall. I'm looking for a little greenish kind of a design, okay? So, yeah, there you go.

[02:21:33] **Dileep Karri:** This is a green type of a design because it's a health application. I like a green type design. All I have to do is just copy the prompt, okay? Don't have to do anything else. You have to copy the prompt, and the prompt kind of describes the fonts, the colors, the placements, the rules.

[02:21:52] **Dileep Karri:** Of how the website has to be designed.

[02:21:55] **Dileep Karri:** So, I will take this prompt.

[02:21:57] **Dileep Karri:** And I'll say, use the below design system.

[02:22:04] **Dileep Karri:** And I will paste the complete prompt.

[02:22:07] **Dileep Karri:** Okay? And now I'll allow it to build it out.

[02:22:12] **Dileep Karri:** So, I have not selected the features from my MVP. I have also attached the design system so that the website or the app, the web application that I'm thinking of building, I can, you know, go with this complete design into it.

[02:22:30] **Dileep Karri:** Right? So it will take some time to kind of scope and build this entire application, so let it build. In the meanwhile, I will check on our website.

[02:22:42] **Dileep Karri:** So there you go, it has kind of built it. Okay, it is still doing... Everything.

[02:22:52] **Dileep Karri:** Right? But you see, here, if I want, on the layout, I can say, centered, Split, or editorial.

[02:23:02] **Dileep Karri:** Okay? So I can choose multiple variations, a centered, split, or editorial.

[02:23:09] **Dileep Karri:** I can go for a sticky CTA bar or a non-sticky. Sticky means when I scroll, it is present over there. Non-sticky means when I scroll.

[02:23:23] **Dileep Karri:** Right? It keeps moving.

[02:23:26] **Dileep Karri:** I think somewhat it isn't, but anyways.

[02:23:28] **Dileep Karri:** It's a sticky, this thing. So I can decide which one to use, etc. And on Accent, let me go to Editorial.

[02:23:36] **Dileep Karri:** On accent, I can go with this accent, this accent, this one, and this one. Based on my preference, I can change my accent overall.

[02:23:46] **Dileep Karri:** Okay, so I have got all of these, kind of variations and everything

[02:23:52] **Dileep Karri:** That is required. And, anything, if I say reserve my free seat.

[02:23:57] **Dileep Karri:** It is kind of going below an, you know, sticky CT bar. So now, if I say reserve my free seat, it will... when I say reserve my free seat.

[02:24:08] **Dileep Karri:** it is still kind of scrolling over there. So, it is a good thing that I have set it up, everything. So, all of these placeholders are something that I'll have to give it later on. But basically, my website is kind of fragile.

[02:24:20] **Dileep Karri:** Now, what I have to do is, I have to share this.

[02:24:23] **Dileep Karri:** Okay, I can say export.

[02:24:26] **Dileep Karri:** Okay, so I can export it as a project archive.

[02:24:31] **Dileep Karri:** Okay? Or as a standard HTML, one self-contained file that can work offline, I can download any way I want.

[02:24:40] **Dileep Karri:** So what I'll do is, I will kind of download it as a project archive for now.

[02:24:46] **Dileep Karri:** Because I will show you, if I want to make, like, a proper website, what is it that I'm going to do?

[02:24:52] **Dileep Karri:** So, I have downloaded this as a proper project archive.

[02:24:57] **Dileep Karri:** I will go to lovable.dev, which is a platform which can, you know, build websites, publish websites, etc. I always use Claude and lovable together, because that combination is good.

[02:25:12] **Dileep Karri:** Now, what I'll do is... I will attach... file.

[02:25:17] **Dileep Karri:** Okay, so I have done the down, you know, kind of downloads. So, I will attach the file, the complete mastermind archive, which has got downloaded. I will try to pick it up.

[02:25:32] **Dileep Karri:** Just give me a second, I am searching for that.

[02:25:36] **Dileep Karri:** Yeah, so I have attached the complete mastermind website that I have built.

[02:25:45] **Dileep Karri:** I will say, look at the files in the zip folder and replicate it exactly this, along with, take information from my live website to fill all the placeholder items.

[02:26:03] **Dileep Karri:** Okay? And I'll say my website is...

[02:26:10] **Dileep Karri:** outskill... Brock.

[02:26:16] **Dileep Karri:** And there I go. So whatever prototype I build, if I want to make it something that can exist, if I want to make it something that lives on the internet, lovable is a way to kind of build that out.

[02:26:31] **Dileep Karri:** Okay? So I take the kind of files in the zip folder, replicate it exactly as is.

[02:26:37] **Dileep Karri:** And, take the information from my live website to fill all the placeholder items. Now, typically, when I do this, on the dates part, sometimes it does not pick the right dates, so just be careful with respect to that. Sometimes the dates that are picked up are not right, so you'll have to be cognizant of that. But otherwise, most of the information, it tries to pick it up

[02:27:00] **Dileep Karri:** And, you know, try to do that. So it is reading the remaining files, the CSS, and everything, all the files it is going to read, and replicate it exactly as is.

[02:27:12] **Dileep Karri:** Okay, so let it keep building this. We will come back and look at what we had done.

[02:27:17] **Dileep Karri:** So there you go. It has built the PRD, the AI calorie counter, and it has built the summary, the goals and non-goals, the non-goals, then what is the core design principle, the target user, the features.

[02:27:31] **Dileep Karri:** The photo mail recognition, every feature has been now explicitly tried to

[02:27:37] **Dileep Karri:** you know, kind of build, etc, and I have got these features.

[02:27:41] **Dileep Karri:** Now, like before, exactly the same, I will say, convert...

[02:27:47] **Dileep Karri:** This into a copy and paste prompt.

[02:27:54] **Dileep Karri:** So that I can put it... inside... lovable?

[02:28:03] **Dileep Karri:** And build the... Complete.

[02:28:08] **Dileep Karri:** application.

[02:28:11] **Dileep Karri:** So I can say, copy this into a copy and paste prompt so that I can put it inside Lovable and build the complete application.

[02:28:20] **Dileep Karri:** Exactly the same thing that we had done in the previous case.

[02:28:28] **Dileep Karri:** Okay? So it is kind of fetching the live content for the placeholders. So, whatever design that you have built inside Cloud Design, that will get converted or attached to live data. Cloud Design only builds prototypes, it doesn't build the actual website. The actual website, you have to build it separately.

[02:28:52] **Dileep Karri:** Okay? For the application also, I will try to build it in lovable.dev only, so I'll keep it ready right now to build out my application.

[02:29:14] **Dileep Karri:** So it is building the complete lovable prompt overall, so that it can be used for my overall application.

[02:29:46] **Dileep Karri:** So it has gone a little complex over here, don't worry, we'll make it simpler.

[02:29:57] **Dileep Karri:** So, at this point in time, whenever your complete prompt is ready, the final prompt, it is worth going to overall, just to understand if it has deviated, if there is some particular thing in your head that it has not captured.

[02:30:12] **Dileep Karri:** It is always worth building that, mentioning that overall.

[02:30:37] **Dileep Karri:** Okay, so it has built the complete web app, it has kind of given all the data model, the LLM contract, etc, and all that. So what I'll do is...

[02:30:47] **Dileep Karri:** I have gone through the,

[02:30:49] **Dileep Karri:** prompt, I think make it a little simpler. I don't want any authentication or, you know, kind of stuff to be built right now. Right now, I just want a functional app where I can test out the features.

[02:31:03] **Dileep Karri:** And on the voice part, if you're not confident, drop the voice part. Just use text to, you know, kind of, you see, you know, kind of change it to simple, text to the entry part easily, so that that is easy to do that, and change the prompt to kind of accommodate this right now.

[02:31:27] **Dileep Karri:** Okay? So I'm asking, to make it a little bit simpler, so that I am... my app that I'm going to build, its scope is lesser. I don't want to build it more technical overall.

[02:31:41] **Dileep Karri:** Right? And this app that I'm building, it has both front-end

[02:31:50] **Dileep Karri:** and backend.

[02:31:52] **Dileep Karri:** Okay? What do you mean by front-end and back-end? Think in terms of a restaurant.

[02:31:58] **Dileep Karri:** Front-end means the place where the customers are seated, They place orders, And they get the dishes.

[02:32:12] **Dileep Karri:** That is the front end. Back end is where the chefs operate.

[02:32:18] **Dileep Karri:** Where the dishes... are prepared.

[02:32:26] **Dileep Karri:** and cooked.

[02:32:28] **Dileep Karri:** Right? So the app that you interact with, the app that you see, the app that you interact with, that is the front end, and the part of the engine, which kind of works behind the scenes of the app and builds stuff, that is the backend.

[02:32:42] **Dileep Karri:** So you have both the front end and the back end, which have to work in tandem. So when we build the prompt, we are building both the front-end as well as the back end over here.

[02:32:53] **Dileep Karri:** Okay? So now, you know, it has made the thing, right? It has, made it very simple overall.

[02:33:04] **Dileep Karri:** So, this is the prompt.

[02:33:07] **Dileep Karri:** Okay?

[02:33:09] **Dileep Karri:** Just as simple as this thing.

[02:33:11] **Dileep Karri:** So far, so good. I can...

[02:33:14] **Dileep Karri:** You know, copy this right now.

[02:33:16] **Dileep Karri:** I copied it.

[02:33:18] **Dileep Karri:** Now, I go into lovable, And I... pasted.

[02:33:30] **Dileep Karri:** So now, it is kind of building this complete web app for me.

[02:33:35] **Dileep Karri:** And, it is going to kind of figure out the things. Right now, I'm making it a very simple version, so that it is working, everything is working well, etc.

[02:33:46] **Dileep Karri:** So that I don't have to, you know, worry about a lot of technicalities. It's a prototype that we are building. It's a MVP we are building.

[02:33:58] **Dileep Karri:** So if you see here, it is building it in phases.

[02:34:00] **Dileep Karri:** And it is, you know, phase one, it is setting up the shell. Phase 2, the dashboard and the text logging. Phase three, what can I eat right now? And phase four is photo logging. It is building all of that complete application for me overall, so this is the build which is happening.

[02:34:18] **Dileep Karri:** So, let this happen. We will check on what is happening on the outskilled website front. There we go. It has built for me the complete website.

[02:34:28] **Dileep Karri:** Okay? Two days building with AI, a Monday, you can ship, right? So that is what it has built. It kind of,

[02:34:35] **Dileep Karri:** You know, build the button a little left, that is fine.

[02:34:39] **Dileep Karri:** It has kind of built it all for me.

[02:34:47] **Dileep Karri:** Okay, when I say reserve my seat, it is coming to this inline thing, which I can use. Now, if I want to publish this website, I will click on publish, and the... I can now say livecloner.lovable.app, or I can say, mastermind...

[02:35:05] **Dileep Karri:** Jimmy,

[02:35:09] **Dileep Karri:** dot lovable.app.

[02:35:13] **Dileep Karri:** And I can publish this, and I can use it. If I want, I can add my custom domain also. So if I have my own custom domain, I can add my custom domain, and I can use it also. So that also is kind of possible, over here, and I can publish this website completely.

[02:35:30] **Dileep Karri:** So this is... this publishing names.

[02:35:32] **Dileep Karri:** that it is a live website that lives on the internet, and you can give it to people to kind of store and use things, etc. Now, some of the things which are not present in the website are the backend, if I'm giving this information, where it is stored, etc. Those linkages have to be done, but overall, it is kind of ready overall.

[02:35:53] **Dileep Karri:** Okay? So this is how you will create a complete website.

[02:35:58] **Dileep Karri:** And this website that you build, it'll be ready. Now, there are some things, like, okay, you know what, this button is on the left-hand side.

[02:36:06] **Dileep Karri:** So I can say, In the hero section, reserve my... free seat... button.

[02:36:19] **Dileep Karri:** must be... centered.

[02:36:30] **Dileep Karri:** Okay? So I'm saying that this reserve my free seat button must be centered overall.

[02:36:48] **Dileep Karri:** There you go. Whatever the problem is, it could center it completely.

[02:36:54] **Dileep Karri:** Okay? So, like that, any errors that you see, you can actually go through the errors and, you know, you can give it, you know, all the requirements via chat itself, and you can fix everything that you want.

[02:37:07] **Dileep Karri:** So now, you don't have to worry about, do I know coding, do I don't know coding, etc. The only skill you require is, do I have clarity of what I want to build? If I have got clarity on what I want to build, I can build anything.

[02:37:21] **Dileep Karri:** I just completed showing you how I build a complete website from scratch.

[02:37:27] **Dileep Karri:** Right? Now, here, your entire thing of your AI-powered application is getting built, so it'll take some time to kind of build all of this. As it is building, let me show you a few more demos, so that you understand how things work.

[02:37:45] **Dileep Karri:** For example, one thing that I have not yet showed you so far was the Claude in Chrome application. Okay, so I'll show you one interesting thing over there. So, first thing, I'll go to my LinkedIn.

[02:37:58] **Dileep Karri:** Okay, so I'll open up my LinkedIn. So this is my LinkedIn, folks. This is my, overall LinkedIn link, and this is... I'm going to kind of connect the dots of the previous things I have done to show you this, okay? So now, this is, the LinkedIn

[02:38:15] **Dileep Karri:** Let me paste my LinkedIn on the chat so that people can also look at the LinkedIn. The problem with LinkedIn is, if I'm trying to use my LinkedIn for anything, I cannot scrape it with anything. If I give my LinkedIn URL in any AI agent, I will not be able to scrape anything.

[02:38:34] **Dileep Karri:** So, therefore, I can use the Claude in Chrome thing. So, I'll open the Claude in Chrome thing, I say, I understand, I'll say next, let's say next, let's go, and my Claude in Chrome thing is now available.

[02:38:50] **Dileep Karri:** So here, instead of ask before acting, I'll say act without asking for now. It is high risk, but it is okay. I am kind of...

[02:38:57] **Dileep Karri:** okay to kind of run with this. And for the task I'm doing, I think Sonnet 4.6 is sufficient. I don't require 4.0, you know, Opus 4.8.

[02:39:07] **Dileep Karri:** Now, here you go.

[02:39:09] **Dileep Karri:** I am actually trying to apply for jobs, so to kind of search for the right possible jobs which are available to me.

[02:39:18] **Dileep Karri:** I want to find all of those jobs which are available, so that I can do that, and for that, I want you to extract the relevant sections of my LinkedIn, so that I can find those jobs for myself.

[02:39:33] **Dileep Karri:** I want to kind of find the relevant sec- extract the relevant sections from my LinkedIn, and give me, like, a complete summary, so that that summary I can use as the basis to find the relevant jobs for me.

[02:39:48] **Dileep Karri:** Right?

[02:39:50] **Dileep Karri:** So now I am telling it this thing. So now I have given the task. My hands are off, if you see. So now it is trying to get the tab, and it is trying to, you know, take control, and it is going to review my complete things. So now it is actually navigating by itself my LinkedIn page.

[02:40:09] **Dileep Karri:** reading it, and understanding who I am as a person, and what are the things that I do.

[02:40:15] **Dileep Karri:** What is my education? Who I am as a person, take the screenshots, and it is retrieving all the education content

[02:40:24] **Dileep Karri:** all my content with respect to what I have done, what I am doing, etc. All of that, it is trying to build it out for me.

[02:40:34] **Dileep Karri:** Okay? Folks, you can check my LinkedIn profile so that you can compare and contrast the kind of work that we are doing. So I'm going to teach you a very interesting workflow in the time the application is getting built.

[02:41:00] **Dileep Karri:** Okay, so it is kind of going through this. It takes time, okay, but think about it in this particular manner.

[02:41:07] **Dileep Karri:** Right now, this is the state of the art currently, but going ahead, this will become even better, even smarter, so Claude can actually go through your complete web pages, complete browser, take control of your browser.

[02:41:24] **Dileep Karri:** Do a lot of things, which can really, really work, like, beautifully.

[02:41:29] **Dileep Karri:** So it is giving me the complete LinkedIn,

[02:41:33] **Dileep Karri:** My profile summary, etc, all that. It is kind of picking this up.

[02:41:42] **Dileep Karri:** all my information.

[02:41:55] **Dileep Karri:** So this is... I have copied this entire information right now. Okay, so now what I have done is, I am going back to my cloud. Okay, so I'm going back to my cloud.

[02:42:07] **Dileep Karri:** And I will go back to the job search, right? I have done these tech jobs in San Francisco, right? I'm going back to job search, and here I have got connectors already available.

[02:42:19] **Dileep Karri:** So, if you look at this, I have got the connectors, and one of the connectors is DICE, which is a place which we can search for jobs on the internet, and I'm looking at the connector DICE, which can search for me jobs in San Francisco. Let us assume.

[02:42:35] **Dileep Karri:** So now, I will say, I'll copy this.

[02:42:38] **Dileep Karri:** This is my... Correct profile info.

[02:42:44] **Dileep Karri:** Find me... suitable... Best... 2, 3 jobs.

[02:42:51] **Dileep Karri:** that icon.

[02:42:53] **Dileep Karri:** apply for...

[02:42:56] **Dileep Karri:** So, I extracted, the thing from the, this thing. Now that it has a full picture, it will run a targeted, search overall, your strongest differentiators for the, GTM or forward deployed roles. So, it is kind of took up this information.

[02:43:21] **Dileep Karri:** So now, it is kind of saying that this is the, you know, job that is there.

[02:43:45] **Dileep Karri:** find me... suitable... jobs... Via web search only. So if I'm not satisfied, I can do simple web search.

[02:44:00] **Dileep Karri:** So it's now going to search the web and find suitable roles for me.

[02:44:05] **Dileep Karri:** Based on what I have asked for.

[02:44:26] **Dileep Karri:** Okay, and then it has asked me, forward deployed engineer applied AI. Applied AI Engineer AI Solutions at Snorkel AI, so it has given me some decent roles that I can apply for.

[02:44:44] **Dileep Karri:** Okay, so now do I see this magic?

[02:44:50] **Dileep Karri:** created... Customized... resume.

[02:44:55] **Dileep Karri:** For me, for the answer, rocket... Roll.

[02:45:05] **Dileep Karri:** So now I'm saying, create a customized resume. So what Claude has present is called something called Skills. Okay, so what skills does is.

[02:45:15] **Dileep Karri:** Skills?

[02:45:17] **Dileep Karri:** are like recipes.

[02:45:20] **Dileep Karri:** Okay? If I'm doing the same process over and over and over again, I can create, like, a playbook of the best practices.

[02:45:33] **Dileep Karri:** Right? Similarly, Claude can allow you to, you know, it gives you some playbook of the best practices, and some of the best practices it has already called are called DocX, like how to create and read documents. It has PPTX, how to create and read PowerPoint presentations, so it has got these skills or recipes or playbooks of how to create all

[02:45:57] **Dileep Karri:** Of these documents, things, etc, all through.

[02:46:00] **Dileep Karri:** So, because of the skills and recipes which are available, it is able to build this out properly, it is able to build it out completely for me, and that is where it is able to now create a customized resume for me.

[02:46:15] **Dileep Karri:** So, it is using a skill. The skill is how to make a proper document. So, it is kind of creating the skill, or it is reading the existing skill, which is already pre-installed in Cloud, to kind of do that.

[02:46:28] **Dileep Karri:** So, if you want to use skills, again, that is present in the paid plans, only on the Pro and the max plans can you get access to skills, and the skills are available across the board.

[02:46:41] **Dileep Karri:** So the beauty of this, the way you should work with this is, you should think about a problem to solve, break it down into tasks, and take those tasks which you want to solve and map it to the workflow, and execute that workflow inside Clock.

[02:46:59] **Dileep Karri:** A lot of things that I have shown, right? A lot of things that I have shown right now. Everything, you can do it on other applications also, the kind of problems that I have solved, and you don't have to worry about it at all.

[02:47:13] **Dileep Karri:** Look at this, beautiful. It has now picked... made a proper resume for me, end-to-end, and I can kind of

[02:47:21] **Dileep Karri:** Paste this resume.

[02:47:24] **Dileep Karri:** I can download this resume overall and send it to Answer Rocket team.

[02:47:29] **Dileep Karri:** Okay? Now, further.

[02:47:32] **Dileep Karri:** Right? If I want to kind of look at

[02:47:36] **Dileep Karri:** more optimizations that I want to do, I can give further prompts and do the optimization.

[02:47:42] **Dileep Karri:** Okay, so that is the beauty of workflows, which can kind of help.

[02:47:49] **Dileep Karri:** Right? Now, there is some kind of error that is available, so how can you troubleshoot these errors?

[02:47:57] **Dileep Karri:** So, I will take the screenshot.

[02:48:01] **Dileep Karri:** And this entire screenshot, I will drop it here.

[02:48:05] **Dileep Karri:** And I'll say...

[02:48:10] **Dileep Karri:** I am... seeing... this... Add up.

[02:48:19] **Dileep Karri:** So, good thing that we are already starting off with the error, because now I will show you also how you can troubleshoot errors that you are facing, and see all through it.

[02:48:34] **Dileep Karri:** Okay? So the error has been solved right in front of us, and we should wait for the app, and now the app is kind of ready.

[02:48:43] **Dileep Karri:** Alright, so it has kind of... I can go to settings first.

[02:48:48] **Dileep Karri:** I can say daily, veg preference is this, or vegan, agitarian Jane, I can do that. So, daily calorie target is fine.

[02:48:57] **Dileep Karri:** Now, what is a log A meal? So, I will say, I had 2 She'll be... cheese... toast... Sandwich.

[02:49:12] **Dileep Karri:** For breakfast.

[02:49:16] **Dileep Karri:** And I'll say...

[02:49:21] **Dileep Karri:** I'll share the estimate.

[02:49:24] **Dileep Karri:** I say, I had 2 chili cheese stove sandwich sandwich, and it has given me 1 sandwich slice, 1 sandwich slice overall, and I can say, add to log.

[02:49:36] **Dileep Karri:** Okay? So, ideally, it should kind of pick up two chili cheese sandwich, it is okay, it has kind of picked that up for me.

[02:49:43] **Dileep Karri:** Next, I will say photo.

[02:49:46] **Dileep Karri:** Right? And I can go to... I can pick up some photo of a dish that I have already done.

[02:49:54] **Dileep Karri:** So, I'm just putting this dish.

[02:50:01] **Dileep Karri:** So I have put in a photo of Panitika, exactly the photo of Panitika I have put, right? And I have put in this overall.

[02:50:12] **Dileep Karri:** Okay? Now there, it is asking multiple modes, which is there.

[02:50:18] **Dileep Karri:** Right? Now I want to see what I can eat.

[02:50:22] **Dileep Karri:** Now, I'll say, what can I eat?

[02:50:27] **Dileep Karri:** Okay? Paneer butter masala, a strong portion, rajma chawal, chana masala, two paneer parathas with curd, I can kind of do this. Okay? So, I have kind of eaten all of this, and it has kind of given me a simple application, which is looking good in the green way, and it is working fine for me.

[02:50:46] **Dileep Karri:** Right?

[02:50:48] **Dileep Karri:** Folks, how are we so far? We built a complete website, as well as have built a complete working application with AI, and it is working completely without any kind of problem.

[02:51:01] **Dileep Karri:** Okay?

[02:51:03] **Dileep Karri:** Awesome. So now, let me show you a few more things.

[02:51:08] **Dileep Karri:** Right? If I want to kind of see the code or something of the entire code, so on here itself, when I click on code, it will show me the complete code that has been written, which you can see, and you can even export this code wherever you want.

[02:51:24] **Dileep Karri:** So, I have the preview. Let us assume that I want to add a simple feature.

[02:51:29] **Dileep Karri:** I want to log the food that I have eaten across breakfast, lunch.

[02:51:35] **Dileep Karri:** Dinner and, say, a snack in the evening.

[02:51:40] **Dileep Karri:** And I also want to edit the quantities if I want. For example, right now, in the bread, it showed me, two, overall as separate, but it should just show me chili cheese sandwich, and I can then improve... increase or decrease in terms of portions, like 1 half, two and a half, three, etc.

[02:52:06] **Dileep Karri:** Okay?

[02:52:08] **Dileep Karri:** So now, these are the features that I want to build, and now it is going to think about how to kind of build these features.

[02:52:27] **Dileep Karri:** So, as it is building the feature, one last thing I would like to show, which is how you can work with CoWork, okay? Co-work is an interesting tool that is available, so I will show you how you can work on Co-work overall.

[02:52:57] **Dileep Karri:** So, I'm going to show it to you on Cobook.

[02:53:10] **Dileep Karri:** There you go, we are on Cowork tab, and I'm going to show you how

[02:53:16] **Dileep Karri:** you know, I will use co-work for something that I'm working on.

[02:53:19] **Dileep Karri:** Very simple use case. I have got a lot of the newsletter issues.

[02:53:26] **Dileep Karri:** of the Staying Ahead newsletter of AI in a particular folder, and I have just attached the folder over here. So I have the Staying Ahead newsletter issues in a particular folder, I have attached the folder over here.

[02:53:40] **Dileep Karri:** Now, I... for me, Sonnet 4.6 is sufficient, but effort, I would require high, so I will go for high effort of Sonnet 4.6.

[02:53:49] **Dileep Karri:** And then, this is what I will do over here.

[02:53:53] **Dileep Karri:** There are multiple issues of the Staying Ahead newsletter in my folder. Can you absorb all of the information? Try to read all the newsletters in parallel using subagents.

[02:54:07] **Dileep Karri:** and then synthesize all the information and make for me, a simple PPT so that I can look at the PPT and understand what all the newsletters are trying to teach me.

[02:54:23] **Dileep Karri:** Okay, and now I will do this.

[02:54:27] **Dileep Karri:** Look at this. We will see it step by step as it happens on the screen.

[02:54:32] **Dileep Karri:** So, first, it is going to figure out what is present inside my Staying Ahead newsletter folder. What are the distinct? There are 10 newsletters which are available.

[02:54:43] **Dileep Karri:** So now, what it has done is, it is going to read all the 10 newsletters in parallel. So, it is going to read all the 10 newsletters in complete parallel, so it is launching 10 readers in parallel. So, see, 1, 2, 3, 4, 5.

[02:55:01] **Dileep Karri:** Six.

[02:55:02] **Dileep Karri:** 7. Eight.

[02:55:05] **Dileep Karri:** 9.

[02:55:06] **Dileep Karri:** 10.

[02:55:07] **Dileep Karri:** So, 10 agents have spun up, which are reading each of those newsletters in parallel.

[02:55:13] **Dileep Karri:** So it is not, like, sequentially one newsletter after another that I am reading. I am able to read all the 10 newsletters readers in parallel, and then one after them, when they are complete, it is saying that I have completed and done.

[02:55:30] **Dileep Karri:** So... within seconds.

[02:55:33] **Dileep Karri:** I am doing 10. If I have 50, 50 will be formed. If I have got 100, 100 also will be formed.

[02:55:47] **Dileep Karri:** Now, it is going to synthesize the lessons that it has read from each of these agents.

[02:55:53] **Dileep Karri:** And then, it will create the PPT for us.

[02:55:58] **Dileep Karri:** So now, it is building the PowerPoint presentation, which will contain the lessons from all 10 of the agents which has done.

[02:56:07] **Dileep Karri:** Originally, if you were to do it in chat, it will read only 1, 2, 3, 4, 5, 6, 7, 8, 9, 10. It'll take at least 4 or 5 minutes to do that, but because we are on co-work, we could use the agents, and we could finish it off in a few seconds, because everything was happening inside parallel.

[02:56:28] **Dileep Karri:** Okay, so now the PPT skill has been invoked to kind of create a very good PPT for us, which can summarize what all we have learned in all those newsletters.

[02:56:47] **Dileep Karri:** So this one, it will take a little bit of time, but after this time that it has taken, it will build this complete PPT for me.

[02:57:18] **Dileep Karri:** So it is saying complex response, so it is taking time, because 10 things that's read, right? It has to synthesize 10 things and then prepare the PPT, so it will take a little bit of time.

[02:57:29] **Dileep Karri:** But that is where Cowork can be used, okay? So, plus this folder is on my local system, so don't worry about privacy, because whatever folder you point it and whatever permissions you do, it will stay within that boundary only.

[02:57:43] **Dileep Karri:** But if you are working on sensitive data, maybe with respect to your company, etc, ensure that you are working on a Claude company license, so that all the information is, you know, kind of safeguarded, and it is not used for training or improving the models overall.

[02:58:05] **Dileep Karri:** But just FYI, what Anthropic has also done is, they have offered enterprises extra credits if they allow, Anthropic to kind of tune the models on their use cases, so that they... because right now, money is all in the enterprise, so Anthropic wants to train the models on top of that, but for that, you have to give permission, and then they will give you credits. So there is some program

[02:58:29] **Dileep Karri:** That has been recently announced.

[02:58:35] **Dileep Karri:** Alright, so let it build. We will come back in a minute or so, but our Lovable has done, so we will come back and look at Lovable and see the complete application overall.

[02:58:49] **Dileep Karri:** So, I go back to my lovable.

[02:58:54] **Dileep Karri:** There you go. Now, I am able to log in in terms of breakfast, lunch, dinner, evening snack, and I can add everything, right? So let me first delete all of this and start from scratch.

[02:59:07] **Dileep Karri:** I will say, break first.

[02:59:10] **Dileep Karri:** I had... too chilly.

[02:59:14] **Dileep Karri:** Cheese, toast... Silence.

[02:59:20] **Dileep Karri:** Okay, so I can estimate, I had two chili cheese stores transitioning. Now, I have portions, I can say one and a half, or I can say 2, and I can add to log.

[02:59:30] **Dileep Karri:** Okay, so now I'm added to log in a proper manner. So, it is under breakfast. Now, lunch, I will put the same photo that I have taken. So, I have taken four... it has got four panicka pieces, by the way.

[02:59:48] **Dileep Karri:** So, now it has got 4 large pieces, it is good. I can add to lock.

[02:59:54] **Dileep Karri:** Right? Now I'll say, what can I eat?

[02:59:59] **Dileep Karri:** So, in what can I eat? It is giving me a lot of things. I can say veg pull-out, log this.

[03:00:05] **Dileep Karri:** Now, I will kind of log it in one... this thing. I will say add to log.

[03:00:14] **Dileep Karri:** Okay, and it has got added to lunch.

[03:00:18] **Dileep Karri:** Right now, I can say that whenever I want to log something, I want to log it in terms of a particular meal, etc, and I want to make those improvements. I could do those also as I keep adding.

[03:00:31] **Dileep Karri:** Now, whenever I want to kind of change some things, when I want to.

[03:00:37] **Dileep Karri:** go back to a previous version of the app in case I found that there is something which was not working. I can go back here, and I can click this, which is saying revert to this version.

[03:00:48] **Dileep Karri:** So, anytime I'm adding a feature, and my entire application, if it breaks, I can use this feature to go back to a previous version of the scene.

[03:00:58] **Dileep Karri:** Similarly to publish, I can say publish.

[03:01:02] **Dileep Karri:** it'll be published on the website URL, and it can also scale everything

[03:01:08] **Dileep Karri:** Based on the number of users. So, Lovable also gives you

[03:01:13] **Dileep Karri:** a scalable infrastructure where, based on the number of users, it will expand on contract, and the pricing system of Lovable

[03:01:22] **Dileep Karri:** is all based on credits. So, when we started, we had started to use

[03:01:28] **Dileep Karri:** credits, like, 122, and we have, kind of come to 1 or 4, right? So that is the amount of usage that we have done, and around 18 credits have kind of gone into building this particular application.

[03:01:43] **Dileep Karri:** Now, what are the credits? Okay, credits means \$0.25 equal to 1 credit.

[03:01:51] **Dileep Karri:** So, when I've used 18 credits, right, you can do the math, 18 into 25, it is around 0.25 into 1825, so I have used almost \$2.7.

[03:02:06] **Dileep Karri:** I have used \$2.7 dollars for this application, converted into Indian currency, that would come to around 220 to 250 rupees, approximately.

[03:02:17] **Dileep Karri:** Right? Now, think about this. If I were to build this application with an external developer, if I were to build the website with an external person, think about how much they would charge.

[03:02:29] **Dileep Karri:** And that is exactly the leverage that you need to think of.

[03:02:33] **Dileep Karri:** Okay? So with this, I will bring my session to a close, where I started with a deep dive into Claude. I know some of you were telling on the chat, you know what, I know this, these are basic, etc, but what I tried to do was, I try to take people along with me who didn't know anything about Claude, and then come to a portion where we are doing some advanced stuff with respect to Claude.

[03:02:56] **Dileep Karri:** Okay?

[03:02:58] **Dileep Karri:** Right. Funny, I think it is still building the PPT. You can take over. In few minutes, I'll come back and show the PPT over there.

[03:03:06] Phani Krishna - Outskill: Absolutely, absolutely. Folks.

[03:03:09] Phani Krishna - Outskill: This was all about plot, this was all about wipe coding, building your products without actually writing a single line of code.

[03:03:17] Phani Krishna - Outskill: Drop in on the chat, how was the session for you?

[03:03:24] Phani Krishna - Outskill: Cloud code is something that we are not covering right away in the Mastermind, because there is a learning curve that you will have to take, and that is the reason why we got started with

[03:03:33] Phani Krishna - Outskill: lovable here.

[03:03:35] Phani Krishna - Outskill: Absolutely amazing.

[03:03:40] Phani Krishna - Outskill: Loving the messages, and I hope all of you take this process back, not just in terms of using Claude in a better way, but also take the knowledge that you have gained about product architecture, about wipe coding, and actually build products for yourselves.

- [03:03:55] Phani Krishna - Outskill: Towards the end of the day, I'll also talk about monetization opportunities that you could have today by going deep into wibe coding as a skill itself. You could build internal products for your own teams, you could build personal products for yourself, or you could also build customer-facing products today. And like Dilip mentioned, MVP is what you can test out and eventually go ahead and probably identify business opportunities
- [03:04:20] Phani Krishna - Outskill: for yourself. So I truly hope that all of you take the resources from this entire session.
- [03:04:25] Phani Krishna - Outskill: Dilip, do you want to show the output, or,
- [03:04:30] Phani Krishna - Outskill: should I go ahead and take them to the lunch break?
- [03:04:36] **Dileep Karri:** I think, you can take them to the lunch break. It is just almost done. It is just doing this thing. So, yeah, maybe we... in another 2-3 minutes, it'll be done, actually.
- [03:04:46] Phani Krishna - Outskill: Perfect, perfect. So, meanwhile, meanwhile, I'll just pause the chat. I'll just pause the chat for a quick second so that I can drop this link in, and all of you can have
- [03:04:57] Phani Krishna - Outskill: you know, focus on this link at this point of time. I'm again resharing the Google Drive link that we had shared yesterday as well, because right now, we have gone ahead and uploaded session notes
- [03:05:09] Phani Krishna - Outskill: From yesterday, and session notes of this particular session is also going to be coming up, and there are workbooks as well that I would want all of you to go ahead and try your hands out on. Let me quickly share my screen and show you what this
- [03:05:24] Phani Krishna - Outskill: DriveLink right now has.
- [03:05:29] Phani Krishna - Outskill: There you go.
- [03:05:32] Phani Krishna - Outskill: Sharing my screen, quick second.
- [03:05:36] Phani Krishna - Outskill: Perfect. Now, like I mentioned yesterday as well, you're going to continue to have access to this Google Drive link. When you go into... there is a roadmap that I've uploaded already right here, and I'm going to be speaking more about this roadmap
- [03:05:51] Phani Krishna - Outskill: as your lunch break gets started, and also towards the end of the day. And there is a GenAI monetization playbook as well, which I'll be speaking more about during the... or towards the end of the day, after we teach you image and video generation as well, after the lunch break, right? But if you look at workbooks at this point of time, you have workbooks from yesterday, and you also have a workbook to help you build up
- [03:06:15] Phani Krishna - Outskill: website using AI, using the same principles that Dilip has gone ahead and taught you in this particular session. So you have step-by-step instructions that you can go ahead and follow from here, and the example that we have taken here is for you to use your resume
- [03:06:30] Phani Krishna - Outskill: to build a personal portfolio website for yourself, but you could also use the same steps to build, you know, a product website as well. The roadmap is something that I will be giving deeper clarity on towards the end of the day, because this is the roadmap that WebHub also promised to everyone already, you know, yesterday, and this is the latest edition of the roadmap as well.
- [03:06:54] Phani Krishna - Outskill: But since Dilip is here, I would like to quickly, have Dilip also share his thoughts

- [03:07:01] Phani Krishna - Outskill: on the next steps that everybody should be taking after this mastermind as well, because like we have been saying, this is a continuous learning journey, and a lot of you people have gone ahead and enrolled yourself into the accelerator program as well. Those of you who have enrolled into the accelerator program yesterday when we spoke about it, you will be meeting Dilip in the program, and a lot of other times as well going forward. But Dilip, if you had... a lot of people also could not
- [03:07:25] Phani Krishna - Outskill: enroll themselves into the accelerator program, right? And we told them that we will be giving the roadmap as well, and I will explain more about the roadmap to them, but
- [03:07:35] Phani Krishna - Outskill: Is there any advice that you would like to give to everyone? You know.
- [03:07:39] Phani Krishna - Outskill: in terms of taking their AI learning journeys forward from here.
- [03:07:43] **Dileep Karri:** Absolutely. I think what I'll also show is something that I've been seeing over all the conversations people are having in the Twitter, LinkedIn, etc, and all those places. So, let me show you that.
- [03:07:57] **Dileep Karri:** So I was pleasantly surprised where somebody was saying, you know what, you need to be an agent strategist, okay? So when I went deeper into what they mean by agent strategist, and this is not a... and look at this, right? This is actually a platform where they... these are... they help companies build better, more human customer experiences with AI.
- [03:08:19] **Dileep Karri:** This is what this company does. And look at what they said, the AI all-rounder. Okay, the role of agent strategist is, you need to know what will work and build and integrate within companies' existing systems.
- [03:08:33] **Dileep Karri:** Right? So, everybody's talking about forward deployed engineer, forward deployed engineer, right? Where you are...
- [03:08:40] **Dileep Karri:** Looking at going and building solutions.
- [03:08:43] **Dileep Karri:** In fact, there is a parallel role that is emerging, which not many people are talking about.
- [03:08:50] **Dileep Karri:** Which is called Forward Deployed Generalist. It is called by multiple names. It is called AI Operations Lead, it is called AI Automation Expert, called AI Problem Solver, AI Generalist.
- [03:09:00] **Dileep Karri:** There are multiple such things which are being used. In fact, AI generalist was, as a term was coined, you know, almost two years back, around October 2024 was when we started first using the term. And when we started using the term, people were like, okay, you are inventing something, you know what, this doesn't exist, you are bluffing, etc. We got all those backlashes.
- [03:09:22] **Dileep Karri:** But now, it has become the norm.
- [03:09:24] **Dileep Karri:** So, P companies are talking about AI all-rounders, AI strategists, AI people who can solve problems within the companies.
- [03:09:33] **Dileep Karri:** Okay? And one major frustration people are having is this budget wars.
- [03:09:39] **Dileep Karri:** How much budget should we actually.
- [03:09:42] Phani Krishna - Outskill: Yo.
- [03:09:42] **Dileep Karri:** were put in, right? Earlier, what companies have done is, they went for token maxing, that is, whoever uses the tokens the most, they are the best AI adopters. What happened is people started using yearly budgets in quarter itself.
- [03:09:57] Phani Krishna - Outskill: Yeah.

[03:09:58] **Dileep Karri:** So that has started happening. So the thing is not about how do I just use the tool, how do I use it effectively, when should I use it? When should I not use it? That is the mindset you need to develop.

[03:10:09] **Dileep Karri:** So today, in the session, right, while everybody knows Opus, Haiku, Sonet, some people know, some people don't know, I laid a lot of emphasis on, okay, use this for this, use this for this, so that you can effectively use the tokens, and you can get the cost-benefit analysis.

[03:10:26] **Dileep Karri:** So right now, people know AI is important, AI is good, AI has to be applied, but people still don't know how to get the best outcomes out of those.

[03:10:37] **Dileep Karri:** Okay? So there is this person who had talked with a CHRO and a CTO of a very big billion-dollar company of AI.

[03:10:48] **Dileep Karri:** This is what is happening inside a true company.

[03:10:51] **Dileep Karri:** Okay? The AI ownership, they are now saying it's a joint ownership between CTO and CHRO. Right? Earlier, it was only the CTO whose mandate was to deploy CAI, conversation is shifting, CHRO is coming into play, and performance appraisals are kind of done with respect to AI.

[03:11:11] **Dileep Karri:** Right? If you remember, our own performance, we just had a complete round of it. One of the important factors was how much of AI we have learned, how we have used.

[03:11:22] **Dileep Karri:** And even in weekly meetings at Outskill, we have to present one slide team-wise on what are the AI initiatives the team is working on.

[03:11:32] **Dileep Karri:** Okay? Then, they are talking about AI adoption as everybody has basic chat GPT access.

[03:11:40] **Dileep Karri:** Everybody is still stuck at ChatGPT is AI.

[03:11:45] **Dileep Karri:** I hope, folks, people, in the last one and a half days that you have spent with us, you saw that there is a world beyond ChatGPT equal to AI prompting equal to AI. We started there, okay, but we went deeper, and today you saw that we saw Claude with deeper permissions, etc.

[03:12:03] **Dileep Karri:** Okay? And what they have is, there is a widening gap between the power users and the rest of the organization.

[03:12:11] **Dileep Karri:** Okay? What is happening is, there are power users, they are talking about access, but I'll tell you what is happening. There are power users in the organization, they are called AI champions, and every B2B conversation that I'm having with companies is all about

[03:12:25] **Dileep Karri:** team, Outskill, we want you to come to our org and talk about the AI champions that we want to work with.

[03:12:35] **Dileep Karri:** Okay, that is exactly what people have been seeing.

[03:12:39] **Dileep Karri:** Right? So you'll have to build agents for personal workflows, but they have not yet reached the scalable, you know, processes overall. And managers frequently complain about low-effort, obvious AI-generated work, lack of clear standards for AI-acceptable users.

[03:12:59] **Dileep Karri:** Okay? That is exactly the cultural friction that is kind of happening.

[03:13:04] **Dileep Karri:** Right? So, what you should understand, what you should kind of go ahead, etc. There has been this recent podcast which has come.

[03:13:14] **Dileep Karri:** by Lenny, and this is a person who is a former partner at Anderson Horowitz. And I will, kind of talk about... he has seen multiple cycles, so this person has kind of mentioned this part.

[03:13:29] **Dileep Karri:** Number one thing he has mentioned. AI is exactly like computers and electricity. There is disruption that it is going to cause.

[03:13:39] **Dileep Karri:** Okay? Will it cause loss of jobs? Maybe not, because it is about AI job transformation. Look at the amount of jobs that existed when there was computers or desktops which were present. At that point in time, some jobs were affected, but new jobs kind of came in. So, upskilling is kind of important.

[03:14:00] **Dileep Karri:** Right? So that is exactly what we have seen overall.

[03:14:04] **Dileep Karri:** Right? Now, with all of these, right, there is a lot of demand for AI, but for the right AI use. For people who think, okay, I have gotten given ChatGPT access, I have given this access, I have become AI native, good luck.

[03:14:20] **Dileep Karri:** Okay? You will see the things later on. So what we had tried to do in this mastermind is we wanted to educate the audience on, hey, this is exactly how you should try to work with AI, and kind of give you a glimpse of how you should kind of go forward from there.

[03:14:38] **Dileep Karri:** Right? So now, as I promised, I will also share the... I think my Claude is kind of done, so let me...

[03:14:47] **Dileep Karri:** Show that, so let me stop my screen.

[03:14:53] **Dileep Karri:** Before I leave, I will also show the PPT it has done.

[03:14:57] Phani Krishna - Outskill: Yeah.

[03:14:58] Phani Krishna - Outskill: I think very, very important points you just spoke about, right? You know, right now, what everybody also needs to focus on is, as cost of AI is increasing, you also have to see whether

[03:15:12] Phani Krishna - Outskill: wherever you're using AI, is that helping in improving the ROI, you know, or the revenue that you're essentially making? But yes, you can go ahead and show the PPT as well.

[03:15:23] **Dileep Karri:** So, it has made 10 newsletters. What is a newsletter? Issue 10, AI May Agents Negotiate for you. Creative Tools, Cloud Code Pros, Blender. Levin Music, AI Music Generation, MCP Servers are Security Risk, DeepSeek V4, is it worth switching?

[03:15:39] **Dileep Karri:** 3 test benchmarks, token cost management, lovable aesthetics, detecting and removing AI patterns, CRIA 2, Recurring lessons across 10 issues. Stay curious, stay ahead.

[03:15:50] **Dileep Karri:** So, 10 issues at the single time, I'm able to do it, and that is the kind of thing, right? If I'm doing a personal learning for myself, this kind of a system can help me surface things and consume more information than I was doing pre-AI.

[03:16:06] **Dileep Karri:** Right? That is exactly my point. That is exactly what I want to build and what I want to do overall. So, irrespective of whether you are doing the program, not doing the program, it doesn't matter at all.

[03:16:20] **Dileep Karri:** Okay? All I am saying is this.

[03:16:22] **Dileep Karri:** If you are trying to be serious about AI, let me frame 3 questions and provide the answers. Question number one.

[03:16:31] **Dileep Karri:** Okay? Can I use AI in any task that I want? You say X, Y, Z, W, X dash, etc. The answer is unequivocal X.

[03:16:42] **Dileep Karri:** Okay? Have we figured out how do we do that properly? Maybe not. There is an experimentation that is pending to take it forward from there.

[03:16:50] **Dileep Karri:** Does everybody need to learn AI? Absolutely, yes. Everybody needs to be proficient in AI. It is like the computer.

[03:16:59] Phani Krishna - Outskill: Yeah.

[03:17:01] **Dileep Karri:** Overall.

[03:17:02] **Dileep Karri:** Okay? And... Third question.

[03:17:06] **Dileep Karri:** Which is maybe, the things which is at the back of everybody's mind. Will AI replace my job? Will my job go?

[03:17:14] **Dileep Karri:** Please do not be paranoid about that.

[03:17:17] **Dileep Karri:** Okay? A lot of the job layoff narrative is built around AI, because that is how stock markets work. When you're... when you say, I laid off jobs due to AI, the stock market goes up.

[03:17:29] **Dileep Karri:** Right? I'm not saying it could not have been the reason, but what I'm saying is, it is not the only reason. Because right now, at Outskill, right, we are growing still.

[03:17:39] **Dileep Karri:** Right? And the reason why is AI has enabled our ambitions to grow.

[03:17:45] **Dileep Karri:** With the same team, we have been able to do 4x, 5x of what we were doing previously.

[03:17:51] **Dileep Karri:** Then why should we not hire a team to go 10X and 20x?

[03:17:56] **Dileep Karri:** Why am I limiting my ambition?

[03:17:59] **Dileep Karri:** That is a question that I have, you know, if I ever meet people who have this job eclipse kind of a thing, this is the question I want to ask them directly.

[03:18:10] Phani Krishna - Outskill: Yeah, beautiful.

[03:18:12] **Dileep Karri:** Right? Yeah, over to you, *****

[03:18:15] Phani Krishna - Outskill: Amazing, thank you so much for being here, Dilip. Again, Rizwan Sheikh is asking, I have 16 years of experience as a senior manager, not sure how AI is going to help me in recruitment. That is exactly what, you know, we are also trying to say, right?

[03:18:30] Phani Krishna - Outskill: don't just think in a boxed approach that, how is AI going to help me? Find those

[03:18:36] Phani Krishna - Outskill: find those processes that you're currently doing manually, and then apply AI over there to improve the efficiency, and that way you will be able to do 10x the work that you're doing as of today, and this is happening already. If you are not able to find use cases in your domain today.

[03:18:53] Phani Krishna - Outskill: You can also research on the internet about how other recruiters have probably gone ahead and used AI in recruitment and in the HR space itself, right? So it's all about that ideation process that you have to put yourself into initially, and think AI. Once you start thinking AI, all of the frameworks and the workflows that we are teaching you are going to be helping you build these solutions as well. And the roadmap, of course.

[03:19:17] Phani Krishna - Outskill: that I'm going to be sharing will have many, or already has many resources as of 2026,

[03:19:24] Phani Krishna - Outskill: you know, June, you know, which you can absolutely go deep into to be able to

[03:19:30] Phani Krishna - Outskill: move closer to becoming an AI orchestrator or an AI generalist. But Dilip, thank you for being here. I will also share your LinkedIn profile link on the chat for people to reach out in case they have any specific questions. But right now, folks.

[03:19:46] Phani Krishna - Outskill: what we are going to be doing is... Dilip, I'll take it forward from here.

[03:19:52] Phani Krishna - Outskill: Awesome. Okay.

- [03:19:55] Phani Krishna - Outskill: With that, we come to the end of Session 1 of Day 2, and I was looking at the poll responses that all of you have gone ahead and given.
- [03:20:06] Phani Krishna - Outskill: absolutely loving the energy and the enthusiasm that all of you are showing. The Google Drive link, Jasmine and everybody else, please take a look at the chat box. If you're not able to find the Google Drive link, in spite of me sharing it multiple times on the chat box.
- [03:20:21] Phani Krishna - Outskill: I'm putting it up once again. If you're not able to find it, you will get this on email as well. I'm not sure what the issue is. Maybe you're not looking at the chat in the right way, but all of the resources are there in the drive link, and we have gone ahead and shared it right away, right? I mean, once again, I've gone ahead and dropped it in on the chat.
- [03:20:41] Phani Krishna - Outskill: I was looking to get Dilipser's newsletter summary PPT. We are going to be sharing the outputs as well, along with the prompts. Many people are asking for the prompts. We will, of course, share the prompts, however.
- [03:20:54] Phani Krishna - Outskill: The art of writing these prompts, the art of giving that context to the AI models is something that should come from you. That is when you will start developing yourself. So, hey, Microsoft Copilot is useful only if you have the enterprise version. That is the reason why we are not including it for the larger group, but we have other micro-sessions that we do on Copilot as well.
- [03:21:17] Phani Krishna - Outskill: Aishwarya says, I saw some people showing the way how to use Claude for free. Is there a way around the paid subscription, and is it valid? No. There are lots and lots of people trying to scam, or trying to make money in wrong ways.
- [03:21:34] Phani Krishna - Outskill: because of what's happening with GenAI as well, anybody who is trying to promise you free credits, anybody who is trying to, you know, tell you that a discounted price is being offered for a subscription of a Cloud or a ChatGPT, unless it is officially coming in from them.
- [03:21:53] Phani Krishna - Outskill: Don't trust such platforms at all. You should always verify the domain that you're making any payment on.
- [03:22:01] Phani Krishna - Outskill: Because...
- [03:22:02] Phani Krishna - Outskill: such phishing websites have also started coming up, so you should be very careful whenever you're going ahead and making a transaction. Of course, what we spoke about, the bonus tools that we spoke about yesterday, along with the accelerator program, those are happening. Even in those cases, we are not going ahead and able to give you ChatGPT subscription or a cloud subscription yet, because we don't have
- [03:22:25] Phani Krishna - Outskill: official partnerships with Anthropic. We have one with OpenAI, but not for, you know, the subscription per se. But all of the other tools that we spoke about are happening because of official partnerships that we have. If any company has that, and they're giving it to you
- [03:22:41] Phani Krishna - Outskill: Through an official channel, then you can go ahead and trust them, but not otherwise.
- [03:22:48] Phani Krishna - Outskill: Should we all go ahead and, you know, take a lunch break right now? Drop in a yes on the chat, but before we go into the lunch break, I have a quick question. Yesterday, we spoke about the AI Accelerator program.
- [03:23:01] Phani Krishna - Outskill: Lot of you have gone ahead and enrolled. People who have enrolled, drop in a me on the chat, and drop in a me if you have already gotten the onboarding call from our team, because our team has already gotten in... has already started getting in touch with people who have enrolled for the Accelerator program. Yes.
- [03:23:20] Phani Krishna - Outskill: Perfect.

[03:23:24] Phani Krishna - Outskill: Please don't spam whoever is... Trying to put the same message. Again, Yubraj Pandey.

[03:23:29] Phani Krishna - Outskill: Please don't spam.

[03:23:31] Phani Krishna - Outskill: But, wonderful to know that, yeah, you might have received a WhatsApp message by now, but our team will eventually get in touch with you one-on-one if you have already enrolled yourself into the accelerator program. But.

[03:23:45] Phani Krishna - Outskill: A lot of people

[03:23:47] Phani Krishna - Outskill: Post yesterday's session by WebHub also reached out over email mentioning a bunch of things, which is, can you extend it to day two? I was just not prepared to go ahead and block my seat, but I really want to be a part of the cohort and everything around it. And today, I see that about 25% of you have missed out on

[03:24:06] Phani Krishna - Outskill: Day one, that happened entirely yesterday, so I'm quickly launching a poll to understand how many of you have heard about the AI Accelerator program that we have, and how many of you have not.

[03:24:18] Phani Krishna - Outskill: Let me know on the poll at this point of time. If you have already heard about it, but you could not block your seat, you can choose the second option. If you want to know about the program, you can choose the third option.

[03:24:29] Phani Krishna - Outskill: If you know about the program, but you cannot absolutely be a part of it at this point of time for various reasons, you can choose the fourth option, and if you have already blocked your seat, you can choose the first option.

[03:24:40] Phani Krishna - Outskill: This is so that I decide what I need to do in the next 10 minutes before everybody takes a lunch break. But the next session is going to be starting at 2.15pm IST on image and video generation. Shantanu will be coming in. He is a narrative strategist, your

[03:24:59] Phani Krishna - Outskill: going to learn not just how you can create images and videos with AI today, but you're going to learn the art of storytelling in the next session. It's going to be absolutely amazing. We're starting that at 2.15pm IST, but until then.

[03:25:15] Phani Krishna - Outskill: While your lunch break is on, I see that on the poll, lots of you are mentioning that more than 500 people are mentioning that you want to know about the accelerator program, and about 200 people at this point of time are stating that you

[03:25:30] Phani Krishna - Outskill: want a second opportunity to join the Accelerator program, and you could not join in yesterday. Well, I wish we could take all the 200, 300 people who are saying so on the poll. You can take a look at it about

[03:25:45] Phani Krishna - Outskill: Still, responses are coming in, and the numbers are growing, but...

[03:25:49] Phani Krishna - Outskill: Today, because of all of the requests that came in.

[03:25:54] Phani Krishna - Outskill: We decided to extend the offer, but like I told you, or like Web have also mentioned yesterday.

[03:25:59] Phani Krishna - Outskill: We have a lot of partnerships with all of these tools that we are giving away as bonuses with this program, right? And for those of you who missed out on the details of it, I will quickly run you through it. But because of all of these partnerships, we don't have unlimited coupon codes that we can give away to everyone.

[03:26:17] Phani Krishna - Outskill: And hence, There are only 30 slots that we are able to open up today.

[03:26:22] Phani Krishna - Outskill: I see that lots of you have the interest. However, for the next two slots, which is in June and the slot that we have in August, we can only open up 30 more slots as of today. And I will go ahead and drop in the enrollment link once again on the chat.

[03:26:41] Phani Krishna - Outskill: After the first 30 enrollments, the enrollment links will be closed.

- [03:26:45] Phani Krishna - Outskill: So, if you are interested, and if you feel that you were not able to grab the opportunity yesterday, for whatever reason, you were not prepared, it came in as a surprise, or you needed to discuss it with someone, and you've done all of that, and you want to join in today, this would be your opportunity this batch.
- [03:27:03] Phani Krishna - Outskill: Going forward, we will be having cohorts every month as well, but the price or the offer will not be the same, because the program, while it's
- [03:27:13] Phani Krishna - Outskill: taught by us, it is also pulled off in collaboration with a lot of partners, so all of this has to come together for us to be able to go ahead and offer something like this, which we are doing only in this particular mastermind, right? So.
- [03:27:27] Phani Krishna - Outskill: The link is in the chat that I've gone ahead and dropped in. Now, those of you who are wondering, hey, what is this program all about?
- [03:27:35] Phani Krishna - Outskill: Give me a quick... Thumbs up, let me turn that on, and...
- [03:27:43] Phani Krishna - Outskill: Give me a second, I'm sharing my screen so that I can give you a quick walkthrough, but how many of you here
- [03:27:49] Phani Krishna - Outskill: are wanting to know what this program is all about. It's an extended program that we run inside of Outskill, beyond of the masterminds that we conduct. For those of you who missed out on this yesterday, I'll quickly run you through the details of this, so that you can decide whether you might want to be a part of this or not, right? So.
- [03:28:08] Phani Krishna - Outskill: We spoke about 5 different levels that everybody needs to go deep into.
- [03:28:12] Phani Krishna - Outskill: And through the mastermind, we are trying to show you what each of these levels look like, and why should you learn them in depth.
- [03:28:21] Phani Krishna - Outskill: In the program that we built out.
- [03:28:23] Phani Krishna - Outskill: And earlier, to be honest, we didn't have this program itself, right? Like Weber mentioned yesterday, a lot of people attended the mastermind, primarily working professionals, entrepreneurs, consultants, and they came back to us saying.
- [03:28:36] Phani Krishna - Outskill: We are not able to spend one and a half, two years searching for the right resources to learn everything on our own. If you are able to bring in your mentors and teach all of this over multiple days, it'll be super helpful.
- [03:28:49] Phani Krishna - Outskill: And that is when we came up with the idea of building this program, which eventually became so popular that it is today.
- [03:28:57] Phani Krishna - Outskill: Which is why you see so many posts around this program coming up on LinkedIn. We call it the AI Generalist Accelerator Program, but the official name of this program is called the Artificial Intelligence Applications for Business Leaders. What do I mean by official name? Well.
- [03:29:14] Phani Krishna - Outskill: We conduct this program in partnership with National Skill Development Center of India under Skill India program. So, there is no GST that we collect for this program as well, and everybody who completes the program, which is everybody who enrolls.
- [03:29:30] Phani Krishna - Outskill: the way it is structured itself will make you complete the program, right? And everybody who completes it will be getting a certificate from Skill India as well. I see enrollments coming in at this point of time, so everybody who is enrolling,
- [03:29:45] Phani Krishna - Outskill: Everybody who's enrolling, I see your names, Aklesh, Umang, Ashitosh, Ashish, Miklash, Swati, and more enrollments coming in. I'll call up your names as

- [03:29:57] Phani Krishna - Outskill: you know, all the 30 seats sort of get over, but let me quickly also give the details of what this program is all about, right? As people are going ahead and enrolling, and then I'll take a few questions as well.
- [03:30:10] Phani Krishna - Outskill: But this is a fast-paced, high-impact program that is designed to help you become a full-stack AI generalist, because we have essentially put together 6 different pieces together, right? We've brought together 6 different structures to make this a 1-year-long program.
- [03:30:28] Phani Krishna - Outskill: Now, the beauty about this is part 1 and Part 2.
- [03:30:32] Phani Krishna - Outskill: While the whole program is a one-year-long program, we teach you everything that needs
- [03:30:38] Phani Krishna - Outskill: you to learn and implement in the first 14 days. So, that is the reason why we mentioned yesterday as well that this program may not work for everybody. We are okay with that, because the lesser people in the cohort, the better it is as well, to provide that personalized assistance to everyone.
- [03:30:56] Phani Krishna - Outskill: But the first 14 days, it's almost 100 plus hours of learning that you will be having every single day.
- [03:31:04] Phani Krishna - Outskill: And right after that, you will be attempting, or you will be participating in a 48-hour build-a-thon with people from across the world. You... you can imagine yourself to be put in a team of, let's say, 8 to 10 people, a product owner, an entrepreneur, a marketer, a designer, a software engineer.
- [03:31:24] Phani Krishna - Outskill: you know, somebody who's probably getting started with their career. All of these fresh minds coming together, people, of course, from different geographies as well, so that you get that exposure, building a product based on everything that you have learned in the first 14 days. It could be an agentic
- [03:31:41] Phani Krishna - Outskill: automation, or it could also be a product that you're building. Many people have started their companies from our own community, because it becomes a micro-startup.
- [03:31:52] Phani Krishna - Outskill: Right? Drop in a heart if, you know, people who are hearing this for the first time, if you are absolutely loving what you're hearing, drop in a heart. Right?
- [03:32:02] Phani Krishna - Outskill: But...
- [03:32:04] Phani Krishna - Outskill: the learning does not just stop with the 14 days. The 14 days gives you a head start. But beyond of that, there are 3 content libraries that you will be getting access to. These content libraries, you will have access to them for one entire year, and you get
- [03:32:21] Phani Krishna - Outskill: new content every week inside these content libraries. So, content for you to upskill yourself always on the go.
- [03:32:29] Phani Krishna - Outskill: And then, you get access to one live session every week for the next one year. We have a team of almost 190 plus people as of today, working on programs like these.
- [03:32:42] Phani Krishna - Outskill: On this program alone, we have close to 75 people working, and we work with over 150 plus mentors as of today. So you can imagine
- [03:32:51] Phani Krishna - Outskill: how, or you can understand how we are able to pull this off every single month, right? With
- [03:32:58] Phani Krishna - Outskill: Hundreds joining the Accelerator program, and thousands joining the masterminds that we do.

- [03:33:04] Phani Krishna - Outskill: Now, this is the structure of the program. What gets tricky, or what could get tricky for you, to be very honest, are the session timings. There are, of course, dates for the first 14 days. We do them in batches and cohorts. So, there is one cohort in June, and there's one cohort in August.
- [03:33:22] Phani Krishna - Outskill: And you can differ as well. If these dates don't work out for you, you can also differ to the future batch.
- [03:33:28] Phani Krishna - Outskill: But the live sessions happen from Monday to Friday, the first 14 days, from 7.30pm to 11pm IST, or 10 a.m. to 1.30pm EST, and Saturday and Sunday, it's 10 a.m. to 7pm IST, or 10am to 7pm EST. There are two separate tracks that we do on Saturday and Sunday for people in ISD and EST.
- [03:33:49] Phani Krishna - Outskill: So that it works out, right? But beyond of these, we don't have any other time zones, and recordings of all of these sessions are provided in case you are having to miss out on any particular session, right? And one of the common questions that came in over email
- [03:34:04] Phani Krishna - Outskill: was, hey, are you going to be putting all the non-technical and technical people together in the same track?
- [03:34:12] Phani Krishna - Outskill: For the technical people, for engineers, people who want to move forward in... as a software engineer in the AI-first world, we have a separate program altogether, and you can block your seat for that program as well on the same link.
- [03:34:26] Phani Krishna - Outskill: And our team, during the onboarding process, will understand what you do.
- [03:34:31] Phani Krishna - Outskill: And then put you in the right track accordingly. That is the reason why we have the one-on-one onboarding call structure as well, for everybody who is enrolling into the program.
- [03:34:40] Phani Krishna - Outskill: And, of course.
- [03:34:42] Phani Krishna - Outskill: There was a bonus that we mentioned yesterday, which was... which blew everybody's minds, which is, through multiple partnerships that we have been able to close over a period of time.
- [03:34:53] Phani Krishna - Outskill: We are giving away access to multiple different tools for one entire year.
- [03:34:59] Phani Krishna - Outskill: These are through official partnerships, so for every tool, you will be getting a coupon code that you can go ahead and apply on that particular platform, and unlock one-year access, right? There's Emily AI, SuperGrow, Numerous AI, Fort AI, Fireflies AI, Humanic, Happenstance, GetMulti, Lizer, Whisper Flow,
- [03:35:19] Phani Krishna - Outskill: and super joined the data analyst.
- [03:35:21] Phani Krishna - Outskill: All of these tools individually would have costed you somewhere close to 2 lakh rupees, but we have included all of them in this particular package.
- [03:35:31] Phani Krishna - Outskill: And we are offering this entire program at a price
- [03:35:36] Phani Krishna - Outskill: 95,000 rupees or \$1200 for people from outside of India, with an option for you to go ahead and block your seat by paying 10,000 rupees, or \$249. And the remaining can either be paid via EMI plans, or part payment options, or flexible payment options.
- [03:35:57] Phani Krishna - Outskill: Or you could pay all of that in one shot as well, or you could make the full payment as well, if that is something that is convenient for you, right? We, of course, don't want anybody to take a debt to make a program like this happen for themselves. We are, you know, we...

- [03:36:13] Phani Krishna - Outskill: you should only take this program and enroll yourself in if you have the luxury of investing in your own education or upskilling at this point of time. If you don't have that luxury for whatever reason, use the roadmap that we are giving you
- [03:36:29] Phani Krishna - Outskill: So that you are able to make some income on the side for yourself using AI itself, and then reinvest that income that you are making
- [03:36:38] Phani Krishna - Outskill: back into programs like these, and there are multiple programs on the internet. We built this out, and we keep it only live.
- [03:36:47] Phani Krishna - Outskill: all of these sessions are live. We don't believe in the concept of having people go through recorded lectures and all of that. Of course, that is a support layer, and that's why we have recorded content libraries, but
- [03:36:59] Phani Krishna - Outskill: We wanted to give this live experience at Outskill, and that is the reason why the program that we have designed might not work for everybody as well. However, what matters the most for you
- [03:37:10] Phani Krishna - Outskill: is that you have to go deep into AI.
- [03:37:14] Phani Krishna - Outskill: Do it yourself, take support and do it faster. However it is that you want to do, do it. That is the message that I would like to give to everybody.
- [03:37:23] Phani Krishna - Outskill: I hope that's clear. I hope everything about the... everything around the program is also clear for those of you who missed out yesterday. And I see almost 22 enrollments almost have come in so far, so people who are still making your enrollment happen.
- [03:37:39] Phani Krishna - Outskill: I've shared the link once again on the chat. I do not know who is dropping in these laughing emojis at this point of time, but if you are, for whatever reason, not interested in this opportunity, you can take your lunch break and come back exactly at 2.15pm IST when we get started with the next session, right?
- [03:37:57] Phani Krishna - Outskill: We always speak about this opportunity only and only for the 7-10% of people who end up taking that in.
- [03:38:05] Phani Krishna - Outskill: Because of whom we are again able to go ahead and teach and
- [03:38:09] Phani Krishna - Outskill: Collaborate with so many influencers as well to, you know, bring this kind of A zero-to-one journey
- [03:38:17] Phani Krishna - Outskill: for the world, right? I also want to know quickly from everyone, how did you get to know about this mastermind?
- [03:38:24] Phani Krishna - Outskill: Where did you hear about this mastermind from? Was it through an ad? Was it through, you know, any influencer of yours?
- [03:38:33] Phani Krishna - Outskill: speaking about it, YouTube, Instagram, at Dishbag, okay? I'll be a new... Raj money, okay?
- [03:38:43] Phani Krishna - Outskill: Staying ahead clubs is someone... friend. Staying ahead club is something that WebHub runs personally.
- [03:38:50] Phani Krishna - Outskill: to share updates with, you know, everyone, AI updates with everyone on a daily basis. Lots of you saying, Rajmani, I love that.
- [03:38:59] Phani Krishna - Outskill: Dhruvrathi, okay?
- [03:39:01] Phani Krishna - Outskill: Open letter, Wow, credit.
- [03:39:04] Phani Krishna - Outskill: Swiggy, all of these have, you know, all of these platforms or these influencers have sort of partnered with Outskill.
- [03:39:12] Phani Krishna - Outskill: asked us to do this kind of a mastermind for their audiences as well, so this time we sort of clubbed everyone into one, and I'm loving the responses that are coming in on the chat. There is Prakhar, there is Shanakia dialogue.

[03:39:26] Phani Krishna - Outskill: Incredible, incredible. The roadmap is something that is uploaded onto the Google Drive link already. I will share more details about how is it that you need to use that roadmap as well. You know.

[03:39:37] Phani Krishna - Outskill: I hope all of you are truly learning.

[03:39:41] Phani Krishna - Outskill: Yes, I see so many amazing

[03:39:45] Phani Krishna - Outskill: you know, names coming in, you should go back to probably the channel of Deshbag, or probably the channel of Rajamani, or probably the channel of ThinkSchool, or wherever it is, Chana Care Dialogue, wherever it is you're from, and thank them for asking OutSkill to do this for you.

[03:40:02] Phani Krishna - Outskill: So, because of which you are able to do this 0 to 1, right? However, however, I see a lot of people still asking for links.

[03:40:11] Phani Krishna - Outskill: I'll share the drive link once again on the chat.

[03:40:18] Phani Krishna - Outskill: There you go. I hope all of you are able to see the drive link. Give me a thumbs up if you can see the drive link.

[03:40:24] Phani Krishna - Outskill: The roadmap is inside the Google Drive link. If you just open it up.

[03:40:30] Phani Krishna - Outskill: you will be able to find the roadmap inside of it. And people who are asking for the enrollment link, that is right here.

[03:40:37] Phani Krishna - Outskill: And right now, I would want everybody to take a lunch break. During the lunch break, what I am going to do for everybody is, I will go ahead and play a quick video to show you what people inside of our community have gone ahead and built out, right? Also calling out the names of the people who have enrolled.

[03:40:59] Phani Krishna - Outskill: Sukman Singh, please write an email to hiretherateoutskill.com, and our team will reach out to you.

[03:41:06] Phani Krishna - Outskill: Into, I'll drop in my email ID on the chat. It's funny at the rateoutskill.com. You can reach out, and I'll help you out. But just calling out the names of the people who have enrolled before we break for lunch. Dr. Reena, your enrollment is confirmed. Javid Alam.

[03:41:23] Phani Krishna - Outskill: Ashitosh, Aklesh, Murali, Umang, Shashank, Praveen, Sandeep, Rishab, Pradeep, Noel, Sebastian, Aman, Sentel... Abhijit Data, Ashish.

[03:41:36] Phani Krishna - Outskill: Saurav, Abhisheikh, okay, I think these are the list of names that I've received so far, at least.

[03:41:46] Phani Krishna - Outskill: Okay, I see more have come in. Shwati, Nambirajan.

[03:41:52] Phani Krishna - Outskill: Shashank, okay. I think these are the...

[03:41:56] Phani Krishna - Outskill: enrollments that we have gotten so far. Some more, my team is still sharing. Once I have them, I'll go ahead and show them to you, or announce them. But yeah.

[03:42:07] Phani Krishna - Outskill: taking a look at the chat. Okay, Ankit certificate and all of that, I'll speak about it towards the end of the day, after I speak about the roadmap as well, right? Right now, what I would love for everybody to do, quickly sharing my screen, is that we are going to be taking a lunch break till 2.15pm IST,

[03:42:26] Phani Krishna - Outskill: The next session is on image and video generation.

[03:42:29] Phani Krishna - Outskill: What I will do during your lunch break is I will quickly play this video that I would want everybody to watch. This video is, of course, to inspire the people who have already joined the Accelerator program, because this is going to be you after the.

[03:42:43] Audio shared by Phani Krishna - Outskill: is all about...

- [03:42:45] Phani Krishna - Outskill: It'll be you after the first 14 days, right? It's just incredible what you will be able to do, but it's also for all of the others who are not joining the Accelerator program for whatever reason. What you will see in this video are products that people like you have gone ahead and built.
- [03:43:03] Phani Krishna - Outskill: I am playing this video so that I'm able to inspire all of you to take this journey forward for yourself, so that you're able to think AI, and you're able to build such incredible products that you will be finding in the video.
- [03:43:18] Phani Krishna - Outskill: Watch this as you have your lunch break, and I will again see you exactly from 2.15pm IST.
- [03:43:26] Phani Krishna - Outskill: Give me a thumbs up if you're aligned.
- [03:43:31] Phani Krishna - Outskill: Perfect.
- [03:43:33] Phani Krishna - Outskill: Perfect.
- [03:43:34] Phani Krishna - Outskill: Let's all come back by 2.15pm IST.
- [03:43:39] Audio shared by Phani Krishna - Outskill: Today's all about reflection.
- [03:43:41] Audio shared by Phani Krishna - Outskill: We are kind of eager to see what you guys have built in, and I must say, there are some wonderful things that you guys have submitted. Welcome, everyone! Today is a special day, a day that we celebrate, just because not we have learned, what we have learned today, but
- [03:43:54] Audio shared by Phani Krishna - Outskill: It is about who we have become over this entire journey of the last 14 days. Firstly, there are four key areas.
- [03:44:02] Audio shared by Phani Krishna - Outskill: How well have you understood your problem?
- [03:44:05] Audio shared by Phani Krishna - Outskill: Whether your app is functional, or whether it actually works.
- [03:44:10] Audio shared by Phani Krishna - Outskill: Third, your creative approach. While the rest of the things are there, how creative was your solution?
- [03:44:17] Audio shared by Phani Krishna - Outskill: problem statement that you have defined. And then finally, how well did you present your idea in the... This is where curiosity meets action, and that is where curiosity met action for the last 14 days. As we reviewed all those submissions, we saw so much of energy, creativity, and we've also seen your late-night hustle from other teams, too.
- [03:44:36] Audio shared by Phani Krishna - Outskill: So we couldn't, just let that go unmentioned. Which is insane! In 2 days, you were able to build up your products, and some of you people have integrated in it and also as a backend.
- [03:44:48] Audio shared by Phani Krishna - Outskill: Which means you have grasped
- [03:44:52] Audio shared by Phani Krishna - Outskill: the learnings that you made, and you were able to execute. How cool is that? This is the spirit of...
- [03:44:58] Audio shared by Phani Krishna - Outskill: The AI Accelerator program, isn't it a quick boom in the chat, if you guys are aligned with what I've shown? And then we have a few testimonials coming in, and we have some live product showcases. Are we all ready to get started?
- [03:45:14] Audio shared by Phani Krishna - Outskill: We created Luna Vida.
- [03:45:17] Audio shared by Phani Krishna - Outskill: We recognize that women need someone to stand beside them to help them keep track of everything. Life is crazy through all the phases of life.

- [03:45:28] Audio shared by Phani Krishna - Outskill: Especially the motherhood phase, but really all other phases. This pays attention to a woman's cycles, it personalizes for her and gives her a live AI companion.
- [03:45:40] Audio shared by Phani Krishna - Outskill: You can see I've made several entries.
- [03:45:44] Audio shared by Phani Krishna - Outskill: a real woman's life, and just imagining I'm a new mother. I'm exhausted, the baby was up all night, I'm overwhelmed.
- [03:45:55] Audio shared by Phani Krishna - Outskill: irritable. Bobby is being a terror again today. You'll see we get this lovely personalized guide. There it goes.
- [03:46:05] Audio shared by Phani Krishna - Outskill: When I came back here, you see, it tells me...
- [03:46:09] Audio shared by Phani Krishna - Outskill: If I need help, I can reach out. The crisis lines to call. Right now, these do work in the U.S, and eventually we'll work on expanding that.
- [03:46:20] Audio shared by Phani Krishna - Outskill: And you can see I still have that check-in history, I can see the days that I've checked in that I have history for. And because it's such a hard day, I need to let my family know what's going on.
- [03:46:32] Audio shared by Phani Krishna - Outskill: And say, Bam!
- [03:46:37] Audio shared by Phani Krishna - Outskill: Just warn them, please be gentle with me today.
- [03:46:44] Audio shared by Phani Krishna - Outskill: And just send my alerts and let them know.
- [03:46:46] Audio shared by Phani Krishna - Outskill: warn them. And I've added the contacts here, so it's personal to me, just the people that I want to have in my circle and let them know. As I was mentioning, Rental Intel, it's an AI copy lot that helps Airbnb hosts improve their booking performance, mainly on qualitative manners.
- [03:47:05] Audio shared by Phani Krishna - Outskill: Let me run you through the landing pages, very, very simple.
- [03:47:08] Audio shared by Phani Krishna - Outskill: I will run some data, like, you just paste here your URL from your Airbnb, along with the rest of the competitors' listings just right here. Let me put on just some examples for the demo.
- [03:47:22] Audio shared by Phani Krishna - Outskill: And just click the Analyze My Listing buttons. Behind the scenes, like, the app will scrape those listings, will run AI comparisons, and will build very, very quickly a tailored playbook for the user.
- [03:47:37] Audio shared by Phani Krishna - Outskill: per se. Notice how quickly the report appears. It's a matter of less than 30 seconds.
- [03:47:44] Audio shared by Phani Krishna - Outskill: no manual research, very, very quickly. Right at the top, we show how your reliant stacks up against the competitors. Also, we list all the amenity gaps that they have, like what would be precious for other guests.
- [03:47:59] Audio shared by Phani Krishna - Outskill: And finally, we test how great or not great was the text description. And yeah, and finally, the AI rewrite, it might refresh your title and description.
- [03:48:14] Audio shared by Phani Krishna - Outskill: with more broad language, selecting keywords especially tailored for your listings, and this is a ticket or gift. Right now, I'm working on the backend, because yesterday I got a bit trouble connecting real backend, but today I tested and it worked, so let's see if it makes sense to build farther.
- [03:48:34] Audio shared by Phani Krishna - Outskill: But yeah, thank you so, so much for the opportunity.
- [03:48:37] Audio shared by Phani Krishna - Outskill: So it scans the photo, the fridge, Then it scans the ingredients.

[03:48:43] Audio shared by Phani Krishna - Outskill: And with that ingredients, we can generate receipts.

[03:48:47] Audio shared by Phani Krishna - Outskill: So, it gives ideas, at least 3 recipes, where you can choose.

[03:48:53] Audio shared by Phani Krishna - Outskill: Easily. It has the instruction how to cook. So, so, it's, it's very simple.

[03:49:00] Audio shared by Phani Krishna - Outskill: And also, you, you can have... you can just upload, you can just write the ingredients yourself, and you can get, also, generate 3 recipes.

[03:49:14] Audio shared by Phani Krishna - Outskill: You have a lot of options. You can generate what kind of food you like, for example, Italian or Indian. And also, you can choose the taste, if it's spicy or mild.

[03:49:28] Audio shared by Phani Krishna - Outskill: So there are a lot of options, there. You can get, wonderful recipes, and also, it also indicates the time, how soon you can cook, how much time you have availability. So, so there are, these options, make easy

[03:49:46] Audio shared by Phani Krishna - Outskill: for everyone who likes to cook food. So this application has tried to implement it, especially my wife, she tried, and she was very, very happy, so that indicates that something is working. Yeah, so the idea is a watch list. So...

[03:50:04] Audio shared by Phani Krishna - Outskill: I like watching movies, actually. I was the deciding vote on what we do. So, yeah, I suggested we do the watchlist.

[03:50:13] Audio shared by Phani Krishna - Outskill: Like movies, I have my collection here, DVDs.

[03:50:16] Audio shared by Phani Krishna - Outskill: And, so... that's the project we did. So, yeah, the basic feature is that we can track

[03:50:24] Audio shared by Phani Krishna - Outskill: what you want to watch, and what you have watched, so...

[03:50:26] Audio shared by Phani Krishna - Outskill: This is the landing page. You get a lot of,

[03:50:30] Audio shared by Phani Krishna - Outskill: suggestions, what is, like, in movies now, trending movies, and everything, it's coming from APIs in the background. I will go out. Actually, this is the landing page, I thought I was not logged in.

[03:50:44] Audio shared by Phani Krishna - Outskill: And then you have your own watchlist.

[03:50:47] Audio shared by Phani Krishna - Outskill: I have just added some random stuff here.

[03:50:51] Audio shared by Phani Krishna - Outskill: And for each, you can basically say, I start watching this now, And it's on watching.

[03:50:59] Audio shared by Phani Krishna - Outskill: And when you're done watching, you can say, mark watched, and then it's watched. And you have filters here. You can see what is, like, want to watch, watching, and watched.

[03:51:09] Audio shared by Phani Krishna - Outskill: You can... As quickly sort stuff by different things here. You can filter.

[03:51:17] Audio shared by Phani Krishna - Outskill: Yeah? Let's add another movie. I like Animatrix. I don't know.

[03:51:25] Audio shared by Phani Krishna - Outskill: Animatrix is a collection of short movies in different anime styles.

[03:51:29] Audio shared by Phani Krishna - Outskill: So...

[03:51:31] Audio shared by Phani Krishna - Outskill: We will just add it to the list here, and now we have it here. And then, press Analyze Page.

[03:51:38] Audio shared by Phani Krishna - Outskill: And...

[03:51:40] Audio shared by Phani Krishna - Outskill: Right below it, you'll see that you can access all these text contents, any links that they offer at Amazon, images, and tables.

[03:51:49] Audio shared by Phani Krishna - Outskill: If you wanna go ahead and see, if you want to get as many results as you can, you can select that. And then...

[03:51:56] Audio shared by Phani Krishna - Outskill: That'll be all on your preview data, and if you like what you see, you can start streaking. Let's show the preview data first. There's so far 10. I think that's what was shown. And export it as a JSON file.

[03:52:12] Audio shared by Phani Krishna - Outskill: There we go. Here, your screen. It's right here. This is the JSON of the... And all these...

[03:52:22] Audio shared by Phani Krishna - Outskill: you could find on Amazon. So, yes. On the budget side, yes, you can set up the budget, you can change the budget. Let's say I just...

[03:52:31] Audio shared by Phani Krishna - Outskill: upgraded it to...

[03:52:33] Audio shared by Phani Krishna - Outskill: 1 lakh. On the, budget, or sorry, scanned receipt, you can simply click on the scan, scan receipt.

[03:52:41] Audio shared by Phani Krishna - Outskill: Upload a file. I'll just pick the same file, because I have only one file. So, you can see on the center, you have got all the information from this receipt. On the right-hand side, we have got which part of the receipt is, actually paid for the growth window.

[03:52:59] Audio shared by Phani Krishna - Outskill: Now, these are the AI features developed by, Harsh only. In that, you will find, your potential monthly savings optimization in your...

[03:53:09] Audio shared by Phani Krishna - Outskill: normal saving potential, and then these optimization areas are defined below. Okay, so basically, the budget optimization is a feature, you know, in which, as per each, as per the spending patterns that the person has, one thing, they can compare it

[03:53:27] Audio shared by Phani Krishna - Outskill: with the data itself, how much they have spent, how much they can, you know, reduce. Where, it will, automatically analyze the data of previous months, so I have added few transactions in previous months to actually check.

[03:53:43] Audio shared by Phani Krishna - Outskill: If it is working or not. So, internet bill. I have been, paying it for 2 months, so now it is showing me due today.

[03:53:51] Audio shared by Phani Krishna - Outskill: You can also check the monthly reports. Yep, that's... that's all we have so far. So, you know, here, I mean, you would see that this is the home page, and we have clearly put out the problem statement and the solution that, you know, you don't need to... I mean, generally it takes, you know, days to plan your

[03:54:11] Audio shared by Phani Krishna - Outskill: holidays, and now you can do it in minutes. And how it works is that you select the number of people who are going to be there on the trip.

[03:54:18] Audio shared by Phani Krishna - Outskill: It could be, maybe, you know, I mean, say it's families, it could be 4 people, so if there are, like, if the number matches, you go to the next step, and you, you know, pick the number of days that you're planning.

[03:54:33] Audio shared by Phani Krishna - Outskill: So here, you see, you know, the entire itinerary is there. It says, family-friendly to London, November 2025. You know, there are... it's basically going to be an 11-day trip, 4 people, the budget is so much, we're going down to Burdon.

[03:54:46] Audio shared by Phani Krishna - Outskill: And, you know, the group details and everything is there.

- [03:54:49] Audio shared by Phani Krishna - Outskill: It gives you a day-by-day, hour-by-hour itinerary, and what we thought of including herein was that, you know, we should also have links to various places so that, you know, people don't have to search, you know, my itinerary section, which I'll take you through later on. And the other part is the surprise meet trip AI. A surprise me is that, you know, you can create multiple itineraries using the same details. So you click on the surprise thing.
- [03:55:14] Audio shared by Phani Krishna - Outskill: You don't want to change anything over here, so you keep continuing, and, you know, while... I mean, the moment you reach to the end, again, a new itinerary would be generated. And you can see, you know, which one you like, and, you know, what all you want to pick up from the different itineraries. If you go to my itinerary, again, you know, you have this one.
- [03:55:32] Audio shared by Phani Krishna - Outskill: You can, you know, you have the option of renaming it.
- [03:55:36] Audio shared by Phani Krishna - Outskill: for your own purpose, if you want to, you know, whatever name you want to give it, you can do that. You can duplicate it.
- [03:55:42] Audio shared by Phani Krishna - Outskill: And, you know, you can also view it, and you can even, you know, trash it. So this is all, about this particular app. So, we had a first sign-in page, so I think that was there, but this is the homepage, the dashboard, where you can see the progress overview of
- [03:56:00] Audio shared by Phani Krishna - Outskill: basically your fitness goals, which is your weekly goals, weight trends, active goals, activities, etc. And in Quick Actions, you have log your progress.
- [03:56:09] Audio shared by Phani Krishna - Outskill: scheduling your workout. So, if you click on log progress, then you can select on whatever metric type. Like, for example, if I select daily steps, I can do, like, 10,000 daily steps and notes, like, outdoor walk.
- [03:56:22] Audio shared by Phani Krishna - Outskill: And once I log the entry, you can see it updates the recent activity as 10,000 outdoor steps walked. And it gives you total entries, active goals.
- [03:56:32] Audio shared by Phani Krishna - Outskill: And your fitness goals, etc. So it has a, like, a detailed onboarding process as well, I can sign out and show that to you guys as well. But you can edit your fitness goals from here, like, you can... if 3 of them are selected, you can just edit these anytime, like, lose weight, for example, and save your goal.
- [03:56:48] Audio shared by Phani Krishna - Outskill: And it updates everywhere else. And another feature that we have is the Fitbot, which is the AI Fitness Coach. So this only answers fitness-based questions. We tried asking it all nonsense questions as well, but thankfully it was not answering those. So I can just type in saying that, recommend... okay, recommend...
- [03:57:07] Audio shared by Phani Krishna - Outskill: The best workout for me.
- [03:57:10] Audio shared by Phani Krishna - Outskill: And it's gonna give me an answer.
- [03:57:12] Audio shared by Phani Krishna - Outskill: Might take, like, a couple of seconds.
- [03:57:15] Audio shared by Phani Krishna - Outskill: Yeah, so it gives you a whole list of recommended workout plan, like frequency, like, 3 times per week, and duration of 30 minutes, bodyweight exercises, and all these things. Apart from this, we have a community page as well, where you can add your own discussions. It basically, like, it creates a thread for all the discussions.
- [03:57:35] Audio shared by Phani Krishna - Outskill: And it is divided into all different categories, like workouts, nutrition, motivation, progress, etc. So, for example, in nutrition, I can start a new discussion, like.

- [03:57:46] Audio shared by Phani Krishna - Outskill: Best meal recommendations.
- [03:57:52] Audio shared by Phani Krishna - Outskill: And I can select the... category as well to nutrition, and I can share my points.
- [03:57:59] Audio shared by Phani Krishna - Outskill: And add different tags as well.
- [03:58:01] Audio shared by Phani Krishna - Outskill: Like, how... Yes, food, for example.
- [03:58:05] Audio shared by Phani Krishna - Outskill: And I can create a discussion, so it adds up over here. So I think that's pretty much about it.
- [03:58:10] Audio shared by Phani Krishna - Outskill: this was the application, yeah. And this was, like, completely unexpected, so thank you so much for this. I hope this was a wonderful journey for all of you, and this was a wonderful experience for all of you. I'm hoping, I really hope, right?
- [03:58:25] Audio shared by Phani Krishna - Outskill: With that being said, I now want to unmute and talk to you people and understand how this entire experience was. Great. So, Bhatwaj, I think somebody,
- [03:58:35] Audio shared by Phani Krishna - Outskill: say that, Badwatch is, like, full of energy and all that, right? I just wanted to call out that he's human, and he also has his, like, you know, ups and downs, right? And I could feel that a few days back.
- [03:58:48] Audio shared by Phani Krishna - Outskill: And I texted to this guy, and I said, what the ***** something is wrong with you. You don't sound like Bugwatch, right? And this guy was back to normal the next day. Now, the reason I'm calling out is because I can understand, you know, how taxing it can be.
- [03:59:03] Audio shared by Phani Krishna - Outskill: You know, really spending days and nights in front of the screens, and really showing that you're motivated while you know inside you there is, like, you know, a big storm that's happening, and still showing up, right? So, thank you for all that you do, but do take care of yourself, alright?
- [03:59:23] Audio shared by Phani Krishna - Outskill: a personal call-out from me, so please take care of yourself. Now, I'm going back to the mentors, right? So, I was kind of surprised when I saw the scores for day one. I thought that was possibly the best session, right? Because starting with Raghuvir coming on the line, he was like, you know, brought that aura into this whole thing, right? And he kind of set the stage.
- [03:59:48] Audio shared by Phani Krishna - Outskill: for the whole 14 days. I thought that was possibly the best section, right?
- [03:59:53] Audio shared by Phani Krishna - Outskill: And then, you know, the rest of it is all history, because, like, so many things happened in the last 14 days.
- [03:59:59] Audio shared by Phani Krishna - Outskill: Right from Raghuvir, starting with Raghuvir and going up to, the likes of Didiep and, you know, Akhil and all that, like, fantastic teachers who really believe in just giving, right? So, really thankful to all of the mentors.
- [04:00:14] Audio shared by Phani Krishna - Outskill: And all of the teams in the background, I know, it's good. You're dealing with not tens and 50s and hundreds, you're dealing with thousands of people.
- [04:00:24] Audio shared by Phani Krishna - Outskill: So, it is taxing, but I really appreciate, you know, the goodness behind all of it that you do, right? So, thank you for that.
- [04:00:33] Audio shared by Phani Krishna - Outskill: Now, coming back to myself and a bit of feedback also, I come from IT infrastructure and operations background, so I'm...
- [04:00:41] Audio shared by Phani Krishna - Outskill: in a way, technical, but still non-technical, right? So, I'm not a coding guy, right? So, it was definitely an eye-opener for me, and definitely I wanted to get in, because IT operations and infrastructure, whoever is close to it.

- [04:00:55] Audio shared by Phani Krishna - Outskill: Understand that, you know, there is lots that happens in the background when it comes to governance, risk, and compliance thing, right? And things related to audit and whatnot.
- [04:01:05] Audio shared by Phani Krishna - Outskill: So, I wanted to get into AI because I knew that this is going to be a big thing, for sure, right? And I know, you know, Jason, you know, put it very nicely as to where the world is going, and we can see that, right? That trend is there. Now.
- [04:01:22] Audio shared by Phani Krishna - Outskill: While I am learning this, my focus is going to be, you know, in the near future, and from then on, it's more on the ethics.
- [04:01:33] Audio shared by Phani Krishna - Outskill: And the governance part of it. So while we learn all the goodness of AI, I just want to make sure that, you know, it is ethically
- [04:01:41] Audio shared by Phani Krishna - Outskill: applied, and, you know, in a very responsible way. So that's going to be my focus, here on. I would definitely reiterate what Rohan couldn't agree more, that I think we were talking about that
- [04:01:53] Audio shared by Phani Krishna - Outskill: that you represent the brand, and that's our experience. Our experience is not so much Webb as much as it is you. And so, I, you know, I think a lot of us agreed with that, and we were talking about it. I think there are a few things that I want to highlight. Firstly, the fact that you said this is the first, sort of, accelerator program.
- [04:02:15] Audio shared by Phani Krishna - Outskill: Given that, the professionalism that you guys have conducted this with, and the ability to plan to every minute, and have delight factors additionally, is really, really creditable.
- [04:02:28] Audio shared by Phani Krishna - Outskill: And, it doesn't look like it's your first rodeo at all, because you guys, you know, the value per minute, is, is humongous, so it's not like, you know, at some point you're getting bored and stuff like that. There's so much value per minute that you guys, everyone in the team does. And I think there's a parable that, you know, about the 99 sheep, and there's a shepherd, and then there's one lost sheep. And I think what Rowan said as well, and I kind of
- [04:02:53] Audio shared by Phani Krishna - Outskill: The thought of that is that one lost sheep, you guys will make sure you go after that one to make sure
- [04:02:57] Audio shared by Phani Krishna - Outskill: that one feels included, and you rejoice more over that one, as opposed to the 99 that's still there, and I think that goes through.
- [04:03:05] Audio shared by Phani Krishna - Outskill: the culture, because you guys lead, and you guys talk, and you set a culture between teams as well, so establishing a culture of community, of collaboration, of support is credit to you guys, I think, because not everyone does it as well as you guys do. And I think overall, the entire design of the course to be much more application-oriented.
- [04:03:28] Audio shared by Phani Krishna - Outskill: Rather than, you know, with the solid fundamentals that you need for people like us that aren't IT background guys at all, and for someone like me to have come up with whatever I did, with Rowan is already, to me, is a huge, huge leap in itself.
- [04:03:42] Audio shared by Phani Krishna - Outskill: Because I have no background in that space. So, I just want to appreciate you, the team, and every mentor that came along that was willing to explain very well, and everyone around as a learning community that was super engaged as well. So I think kudos to you guys, kudos to all of us as well.
- [04:03:59] Audio shared by Phani Krishna - Outskill: Firstly, your energy is really infectious, and, you know, it's been...
- [04:04:03] Audio shared by Phani Krishna - Outskill: a really fulfilling journey. And, I'm not a techie guy. Yeah, I've had problems with my laptop. Sorry, I'm sitting with two laptops.

- [04:04:14] Audio shared by Phani Krishna - Outskill: So I don't miss any part of the session, but, I mean, really, I have put a lot of what I've learned to use.
- [04:04:22] Audio shared by Phani Krishna - Outskill: And, the journey had been amazing. I actually wanted to do a doctorate in AI, and I even got a scholarship from, Walsh Business School.
- [04:04:34] Audio shared by Phani Krishna - Outskill: But I decided not to go ahead with that after I've enrolled in this program. But the learning here has been tremendous. I've already started
- [04:04:43] Audio shared by Phani Krishna - Outskill: building my own, you know, tools. And, I've been recommending the program to many people from my family, in my office. In fact, I do work late on most days.
- [04:04:56] Audio shared by Phani Krishna - Outskill: And people... my team was surprised that I was leaving office early, you know, all these days, and one day when I had to be in office, some of my colleagues were wondering what was happening, and they came to see. We were sitting in the room.
- [04:05:10] Audio shared by Phani Krishna - Outskill: And, I mean...
- [04:05:12] Audio shared by Phani Krishna - Outskill: They really saw part of the program, and they're also going to be joining soon. Yeah, a movie, I don't know if you've heard, have you seen the movie Head and Figures? Yeah, not watched. Head and Figures, it's the story of the African women that worked at NASA.
- [04:05:27] Audio shared by Phani Krishna - Outskill: Right? And they were doing all the mathematical equations in the back, and one of their leaders decided that this computer thing was coming, and she decided to go learn about it, and then teach everyone, so that they wouldn't lose their job.
- [04:05:40] Audio shared by Phani Krishna - Outskill: And this is what Outskill is doing, right? That's the mission. It's like, you're democratizing, and you are so much...
- [04:05:46] Audio shared by Phani Krishna - Outskill: energy into it, you're so enthusiastic, that's what makes you the success. So the mentors, they're so excited, just like Bebab is excited about it, right? Bebab's so excited about it, he wants to jump on a call. Hey, let me talk about this, I just found this new thing! It's amazing. And, you know, the fact that he found this new thing, he talked about Gensmark, so he created Genspark, he shared that, you know, during that talk, when he talked about Gensmark, I actually downloaded it, and I used it. I'm about to close a 90
- [04:06:10] Audio shared by Phani Krishna - Outskill: about 95% to close a \$1.4 million contract for my company, just because of that tool. Whoa! \$1.4 million Canadian, by the way, not US, so, you know, but it's not too bad. Over a 3-year contract. I'm about this close to closing.
- [04:06:25] Audio shared by Phani Krishna - Outskill: because of Genspark, you know? So, if people were listening, and then people were
- [04:06:31] Audio shared by Phani Krishna - Outskill: acting and doing, because that's the beauty of it. You guys are speed, transparency, and pivoting.
- [04:06:37] Audio shared by Phani Krishna - Outskill: People are not used to it. You know, they say, jump off a cliff and build a parachute on the go? That's what AI is all about, and that's what you guys are doing. People are not comfortable with that, they want everything done up, you know, might not be the journey for them, because the journey is actually limitless, so...
- [04:06:51] Audio shared by Phani Krishna - Outskill: The mentors, kudos to them, they're excited, they're fully into it, enthusiasm is great. Q&A, they over-delivered, your energy is awesome. Two things I'd like to finish up on, because I want to give the time for the other folks to speak up. Two things, just like my friend before, he said, like, there's a lot of chats, you know, Yusufi talked about a lot of chats. Perhaps turn off the chats and create a slide-doo.

- [04:07:15] Audio shared by Phani Krishna - Outskill: that actually you would connect it. And at the end, create an AI that would actually review all the questions, and anything that's repetitive, summarize it so that you don't have to go back to the same question. Perhaps there's something like that. So, you know, in the facilitation.
- [04:07:30] Audio shared by Phani Krishna - Outskill: realm, because I'm a facilitator and a coach, you talk about putting it in a parking lot. When you're on doing something, people raise their hand, they want to talk about something else, they go, that's a great question, put it on the parking lot. If you had a digital parking lot that people could have access to, because sometimes questions come to you, and you don't realize it, you know? And if you don't have it on the side, it doesn't work.
- [04:07:48] Audio shared by Phani Krishna - Outskill: The other piece, I want to finish up, notes by Siddharth. Siddharth's bike coding, because he had the notes, he said, hey guys, I've built this up for you, you don't need to worry about the length, you don't need to worry about taking screenshots, it's everything here. Just concentrate. I was able to just concentrate on what I was doing and pay attention.
- [04:08:07] Audio shared by Phani Krishna - Outskill: Because I knew I wouldn't lose anything by taking notes down or having the screen. And he had it... he showed it to us, right? He said, hey, it's uploaded, it's there, I've shared it, just download it, but concentrate now. The steps are going to begin, I'm gonna go through it. So it's learning on both sides, listening and seeing.
- [04:08:21] Audio shared by Phani Krishna - Outskill: That's it, my friend. Outskill, you guys, outperforming, outdoing.
- [04:08:26] Audio shared by Phani Krishna - Outskill: I personally love you. I would recommend this program to anybody, I actually talk about it in Canada, and anyone I have a chance to meet, anyone that's, I get a chance to coach, I actually share about your program. So, thank you very much.
- [04:08:39] Audio shared by Phani Krishna - Outskill: Thank you, thank you so much, Tito. Thank you so much, my friend. Would love to probably catch up sometime if I'm in Canada sometime, that's a great thing, and I want to know more about...
- [04:08:49] Audio shared by Phani Krishna - Outskill: I want to know more about what deal you've got. Reach out to me, reach out to me, I'll tell you all about it, right? You can DM me, we can chat about it. And I can show you the... I can show you the proposal I built up, too, on Jen's part, to you.
- [04:09:04] Audio shared by Phani Krishna - Outskill: Thank you so much. Thank you, thank you, Tito. Thank you so much. Much fun the last two weeks. I won't be telling anything new, but then, I still wanted to take the stage to thank you, and also the rest of the team. Three things that I wanted to say.
- [04:09:19] Audio shared by Phani Krishna - Outskill: In terms of... so first was the course and the content, because before signing up for Outskill, I was also just broadly searching, and everyone were offering different things, but...
- [04:09:27] Audio shared by Phani Krishna - Outskill: The way you guys, and I think I dropped you a private message as well, the way... the program management, right? The way you... your content, right, from the concept, to the AI tools, to automation, to product building, it's very well thought out.
- [04:09:40] Audio shared by Phani Krishna - Outskill: It is designed with care, and also just intelligence, and very market-ready as well. So, to package something, that kind of caters to the mass, while it also is value-adding, and actually you executed it. And for somebody working... I've been in strategy and programs.
- [04:10:00] Audio shared by Phani Krishna - Outskill: I know a good structure when I see one, and that was great, so from the course, the content, great.

- [04:10:06] Audio shared by Phani Krishna - Outskill: I think as a business, you guys are really intelligent, in terms of how you have the weekend version that kind of then gets onto the accelerator version. So it's just nice to see how, as a very new business, you're just orienting, switching, pivoting, iterating yourselves.
- [04:10:21] Audio shared by Phani Krishna - Outskill: And all of you on the team, I know you... I know everyone has put the spotlight on Bharatwatch, but also want to
- [04:10:28] Audio shared by Phani Krishna - Outskill: Hank, you know, Shasti, Anitya, Ashitosh, try to remember the names, all the mentors, the lead, plus everyone else up till then, and so on. It's almost like you're, yeah, you're kind of unified in your culture. You're unified in your messaging without really
- [04:10:43] Audio shared by Phani Krishna - Outskill: telling the same things, you're kind of aligned, which is great. I think the last part is the cohort. It is one thing, even before signing into Outskill, I was meddling with a couple of products, like Bold, or allow some of those things, but to do it with a team, to see the kind of outcomes that came in today.
- [04:11:00] Audio shared by Phani Krishna - Outskill: all the top products. It's just amazing to see what we can do.
- [04:11:05] Audio shared by Phani Krishna - Outskill: with group cohort energy, with the kind of, help people we're offering each other. So I think to get all these three compliments right, and in two weeks, is amazing. So, thank you all. Fantastic connecting, and, especially also to yourself, Arjbaj, and the support team, too.
- [04:11:22] Audio shared by Phani Krishna - Outskill: Thank you, thank you so much, Ashmi. I remember the message that you dropped to me on LinkedIn. I was really... it was really heartwarming when that came... it was the timing, right? When the second session didn't really go well, I mean, like, I had all the team on the floor, and Weber was also here, like, what has happened? Just let me know. And then we had
- [04:11:39] Audio shared by Phani Krishna - Outskill: to reiterate on a lot of things to put that plan out, and I think for Batch 2, the second session will be placed much later, so we are altering the design of this program. Thank you so much for those kind words, looking forward to stay in touch with you as well, and I'll be active on LinkedIn as well. Anything, any concern, you can drop a message there, I'll be help... I'll be ready to help you.
- [04:11:58] Audio shared by Phani Krishna - Outskill: Thank you. Chozled.
- [04:12:00] Audio shared by Phani Krishna - Outskill: On a serious note, you know, I am someone who struggles with procrastination and, you know, attention span, like a lot of people do now, right? So, I cannot mention the number of courses I've enrolled to.
- [04:12:14] Audio shared by Phani Krishna - Outskill: And not completed it, right? But this was one of the quotes I've, like, not missed a single minute. Like, I used to have... somehow, if I was, you know, if I had something important, I would have filled this FOMO. Because every day it was like a, you know, Game of Thrones episode, you know, some magic happening, like, you know, a lot of value in each minute. So, everything was, like, perfect when, you know, all the
- [04:12:39] Audio shared by Phani Krishna - Outskill: faculty.
- [04:12:40] Audio shared by Phani Krishna - Outskill: I remember all of them, I mean, I don't want to mention names, but I remember one of the... even Akhil, right? I remember pointing out that he was, you know, getting a little technical in his first session, and then, you know, they were adopting to the, you know, attendees, and it was very clear, the known words, you know.
- [04:12:59] Audio shared by Phani Krishna - Outskill: catching up with the pace of everyone else. So... and this... it was amazing, lovely experience. I feel, you know, I'm not a techie, so... apart from AI itself, you know, got to learn a lot of, you know.

[04:13:15] Audio shared by Phani Krishna - Outskill: techie terminology, you know, front and back-ends. You know, when people... techies talk, you feel a little out of place. Now I'm more confident to... because I have a lot of techie friends, I come from Bangalore as well. So, you know, you know, you feel out of place, so now I can, put in a little more, a couple of more, terminology that they don't understand. So, it's been good. And also, all the attendees, right, usually when you

[04:13:40] Audio shared by Phani Krishna - Outskill: When you spend time among... when you're in a group of large people, there are usually some bad apples, but, you know, I was stunned, like, all the people here, professionals, well-spoken, respectful, so it's been a great experience, man.

[04:13:55] Audio shared by Phani Krishna - Outskill: Thank you. That's all.

[04:14:39] Audio shared by Phani Krishna - Outskill: The sky hot!

[04:14:40] Audio shared by Phani Krishna - Outskill: that took our breath away. Here are Daddy dressed in trivia facts about Tom Cruise.

[04:14:46] Audio shared by Phani Krishna - Outskill: One real name, Tom Cruise's full name is Thomas Cruise Magnol.

[04:14:51] Audio shared by Phani Krishna - Outskill: His breakout role.

[04:14:53] Audio shared by Phani Krishna - Outskill: Recount, girl!

[04:14:54] Audio shared by Phani Krishna - Outskill: 19, they feel risky business. We famously danced in an underworld to Bob Seeger's old

[04:15:04] Audio shared by Phani Krishna - Outskill: All time roll!

[04:15:07] Audio shared by Phani Krishna - Outskill: Through the thing, for three Academy Awards throughout his career.

[04:15:14] Audio shared by Phani Krishna - Outskill: 1989, Jerry would... Holy God!

[04:15:20] Audio shared by Phani Krishna - Outskill: Magnolia!

[04:15:35] Audio shared by Phani Krishna - Outskill: Known for performing many of his own stunts. For example, in the Mission Impossible series, he has done everything from hanging off buildings to flying helicopters. Five Scientology.

[04:15:47] Audio shared by Phani Krishna - Outskill: Stop!

[04:15:48] Audio shared by Phani Krishna - Outskill: is a problem.

[04:15:49] Audio shared by Phani Krishna - Outskill: The key for the Church of Scientology has been one of its most famous and outspoken members for decades. He's a pilot.

[04:15:57] Audio shared by Phani Krishna - Outskill: Bruce is a certified pilot and has flown in a variety of aircraft.

[04:16:01] Audio shared by Phani Krishna - Outskill: Including Jets.

[04:16:04] Audio shared by Phani Krishna - Outskill: War II airplane, he flew a Top Gun Maverick.

[04:16:10] Audio shared by Phani Krishna - Outskill: has been married 3 times to actresses Mimi Rogers, Nicole Kidman, and Katie Holmes, 8 months.

[04:16:17] Audio shared by Phani Krishna - Outskill: It's key, cause movies have a feeling.

[04:16:19] Audio shared by Phani Krishna - Outskill: Mission and...

[04:16:24] Audio shared by Phani Krishna - Outskill: of his career.

[04:16:28] Audio shared by Phani Krishna - Outskill: Who said a world?

[04:16:30] Audio shared by Phani Krishna - Outskill: Most responsible.

[04:16:33] Audio shared by Phani Krishna - Outskill: In his own previous record in Mission.

[04:16:46] Audio shared by Phani Krishna - Outskill: stations!

[04:16:49] Audio shared by Phani Krishna - Outskill: Filling those supporting children and helping with disaster relief.

[04:17:00] Audio shared by Phani Krishna - Outskill: 3 Academy Awards throughout his career.

[04:17:04] Audio shared by Phani Krishna - Outskill: 4th of July, 1989.

[04:17:07] Audio shared by Phani Krishna - Outskill: Jerry Maguire.

[04:17:08] Audio shared by Phani Krishna - Outskill: No, dear.

[04:17:10] Audio shared by Phani Krishna - Outskill: Magnolia, Magnolia! Magnolia, Bill Cruz is known.

[04:17:15] Audio shared by Phani Krishna - Outskill: What Cruise is a problem.

[04:17:18] Audio shared by Phani Krishna - Outskill: of Scientology.

[04:17:21] Audio shared by Phani Krishna - Outskill: Banks and outspoken members for decades.

[04:17:24] Audio shared by Phani Krishna - Outskill: He's a pilot.

[04:17:26] Audio shared by Phani Krishna - Outskill: You said one!

[04:17:51] Audio shared by Phani Krishna - Outskill: City likes like diamonds blink on tight streets.

[04:17:56] Audio shared by Phani Krishna - Outskill: Honking horns play symphonies where chaos meets. Move like shadows on a neon-painted stage. In this moonlit traffic, let's turn another page

[04:18:13] Audio shared by Phani Krishna - Outskill: Morning coffee symphonies rise with the dawn.

[04:18:18] Audio shared by Phani Krishna - Outskill: Busy bees in their carpool, just carry on.

[04:18:24] Audio shared by Phani Krishna - Outskill: Streetlights fade, but dreams we've had are still surreal.

[04:18:29] Audio shared by Phani Krishna - Outskill: In the smooth trap, Our secrets, they conceal.

[04:18:43] Audio shared by Phani Krishna - Outskill: Things we roll!

[04:18:48] Audio shared by Phani Krishna - Outskill: This guy is true!

[04:18:51] Audio shared by Phani Krishna - Outskill: Every lie is story, etched upon the world.

[04:18:57] Audio shared by Phani Krishna - Outskill: Boards scream with faces we don't recognize.

[04:19:02] Audio shared by Phani Krishna - Outskill: Every mile... Memory within our... In the rear view, We left behind.

[04:19:13] Audio shared by Phani Krishna - Outskill: In this moment, traffic Freedom's what we find.

[04:19:18] Audio shared by Phani Krishna - Outskill: Silent radios play the songs of yesteryear.

[04:19:24] Audio shared by Phani Krishna - Outskill: Windows down the window.

[04:19:26] Audio shared by Phani Krishna - Outskill: Our navigator here.

[04:19:30] Audio shared by Phani Krishna - Outskill: Visions blur the lines of space and time.

[04:19:35] Audio shared by Phani Krishna - Outskill: Life's being the past.

[04:19:37] Audio shared by Phani Krishna - Outskill: I'll finally climb!

[04:19:42] Audio shared by Phani Krishna - Outskill: Nice good!

[04:20:46] Audio shared by Phani Krishna - Outskill: Every life... Yes, upon...

[04:21:20] Audio shared by Phani Krishna - Outskill: I walked these halls a thousand times, felt the silence throughout the signs, hiding shadows, biting tongues, I thought I'd change, I fit, I was used to it.

[04:21:36] Audio shared by Phani Krishna - Outskill: I tried to fit inside your world, then myself got broke instead. Every whisper, every lie kept me hanging in this rope.

[04:21:47] Audio shared by Phani Krishna - Outskill: Feel... The way...

[04:21:52] Audio shared by Phani Krishna - Outskill: The game's new!

[04:21:56] Audio shared by Phani Krishna - Outskill: I don't belong, I should stay too long.

[04:22:09] Audio shared by Phani Krishna - Outskill: I held my breath, I played along Felt the way to stayin' strong Every promise wore me thin Still I stayed and let you in.

[04:22:19] Audio shared by Phani Krishna - Outskill: I tried to fit inside your world.

[04:22:22] Audio shared by Phani Krishna - Outskill: And myself, the broken stead. Every whisper.

[04:22:27] Audio shared by Phani Krishna - Outskill: Kept me hanging in this robe, now I'm gone

[04:22:36] Audio shared by Phani Krishna - Outskill: The game!

[04:22:41] Audio shared by Phani Krishna - Outskill: below.

[04:22:42] Audio shared by Phani Krishna - Outskill: I'll just stayed too long

[04:22:53] Audio shared by Phani Krishna - Outskill: Now it's crystal clear I was just a ghost to you. No more waiting, no more pain, I'm not afraid to walk away I just stayed too long

[04:23:12] Audio shared by Phani Krishna - Outskill: Now I know!

[04:23:14] Audio shared by Phani Krishna - Outskill: I feel the way I feel, why did I?

[04:23:21] Audio shared by Phani Krishna - Outskill: Thank you!

[04:23:26] Audio shared by Phani Krishna - Outskill: I'll just stayed too long

[04:23:44] Audio shared by Phani Krishna - Outskill: How'd you stay too long?

[04:23:47] Audio shared by Phani Krishna - Outskill: Now I'm gone.

[04:23:50] Audio shared by Phani Krishna - Outskill: I'll prove myself.

[04:23:52] Audio shared by Phani Krishna - Outskill: Try to fiddle along, I will find a place to belong.

[04:24:56] Audio shared by Phani Krishna - Outskill: Welcome to the...

[04:25:06] Audio shared by Phani Krishna - Outskill: Dancing to the ones no one plays anymore. You sang the wrong word to London Calling. I joined in and we both started laughing.

[04:25:16] Audio shared by Phani Krishna - Outskill: mixtape, held it like gold. Skip to side B, that's the Lord, I'm told, That it's like life.

[04:25:22] Audio shared by Phani Krishna - Outskill: Roughin'... Little slime.

[04:25:29] Audio shared by Phani Krishna - Outskill: Headlights on!

[04:25:41] Audio shared by Phani Krishna - Outskill: Repeat, stop.

[04:25:46] Audio shared by Phani Krishna - Outskill: Walk onto rooftops just to kill time, countin' sad

[04:25:49] Audio shared by Phani Krishna - Outskill: Light trails and graffiti signs, he said, do you think Remember this night I felt

[04:25:56] Audio shared by Phani Krishna - Outskill: It's probably right, we play dumb games on a Game Boy.

[04:26:00] Audio shared by Phani Krishna - Outskill: The beeps in your silence, both equally loud.

[04:26:05] Audio shared by Phani Krishna - Outskill: I looked up and said, isn't it wild how this feels like Welcome to nowhere!

[04:26:40] Audio shared by Phani Krishna - Outskill: We burned the time we thought we'd keep, but the ash settle like snow on the street. Who cares?

[04:26:51] Phani Krishna - Outskill: All right, everyone. Are we all back from the break? Drop in back on the chat.

[04:27:00] Phani Krishna - Outskill: The chat is on.

[04:27:02] Phani Krishna - Outskill: And so are the reactions as well. You can drop in a thumbs up or a heart if you're back from the lunch break.

[04:27:10] Phani Krishna - Outskill: Just gonna give it 30 more seconds for everybody to come back in.

[04:27:14] Phani Krishna - Outskill: Sukrat, if you have missed the first session today, that's fine. We are jumping into a new topic altogether, which is image and video generation. And not just image and video generation, but the art of storytelling, the art of narrating powerful stories is what we're going to be focusing on over the next two hours.

[04:27:31] Phani Krishna - Outskill: So, I will be sharing the resources, and I will go ahead and do an entire recap towards the end of the day, but if you have missed out on the previous session, it's fine.

[04:27:42] Phani Krishna - Outskill: You will be able to catch up right now.

[04:27:45] Phani Krishna - Outskill: Shukman, please don't spam. I will check the email and all of that much later, but are we all excited to get into diffusion models, or

[04:27:56] Phani Krishna - Outskill: the creative field that you can today tap into just because of generative AI, something that we have not seen until this point of time.

[04:28:05] Phani Krishna - Outskill: Since we got started with the Mastermind, are we all excited? Drop in excited on the chat. And as all of you do that, if you're thinking that this session is going to be all about just

[04:28:18] Phani Krishna - Outskill: tools that'll generate images and videos? Absolutely not.

[04:28:23] Phani Krishna - Outskill: The tools that will generate your images and videos, you might have played around with those tools all by yourself as well. You might have used Nano Banana, you might have used other video generation models as well, and these tools will always come and go. But what we are going to be focusing on in this particular session is how can you push AI

[04:28:43] Phani Krishna - Outskill: And how can you think like a filmmaker, like a narrative strategist, to go ahead and narrate beautiful stories about yourself.

[04:28:52] Phani Krishna - Outskill: or the brands that you're working for, or the brands that you're leading at this point of time. There's a lot that you can do with AI in terms of generating ads, in terms of generating movies and everything around it. This is also something that is helping people monetize at a huge scale as of today, right? And that part of monetization I'll speak about towards the end of the day.

[04:29:15] Phani Krishna - Outskill: But over the next 2 hours, you will essentially learn a professional workflow through which you will

[04:29:22] Phani Krishna - Outskill: Be able to narrate powerful stories, and also bring those stories

[04:29:27] Phani Krishna - Outskill: visually into reality. That is what the objective of this entire session is going to be all about, and like I told you, Shantanu will be leading this entire session. He comes with immense experience in the, in the space of, you know, filmmaking, in the space of narrative strategy.

[04:29:47] Phani Krishna - Outskill: And today, he's building a lot of things with AI. He has been doing that since the last few years, and all of those learnings is what he's going to be sharing with all of you today. Super excited to have you with us today, Shantanu. Let me give you the access.

[04:30:04] Phani Krishna - Outskill: Perfect.

[04:30:06] Phani Krishna - Outskill: I hope you are able to hear me well.

[04:30:09] **Shantanu Tungare:** Hi, hi, funny, how's it going? I'm audible.

[04:30:13] Phani Krishna - Outskill: Yes, you're audible. Can hear you well, can see you well. Folks, drop in a yes if you can hear us

[04:30:20] Phani Krishna - Outskill: or hear Shantanu well, and if you can see him.

[04:30:24] **Shantanu Tungare:** So many people, funny as usual, thousand... how do we... how do you guys manage? I never really understand.

[04:30:29] **Shantanu Tungare:** How many people trying to adopt?

[04:30:31] Phani Krishna - Outskill: Yeah, it's the curiosity that everybody around the world is having. Folks, do you all want to drop in on the chat where you're from, so that Shantu gets an idea of the demographics that we have?

[04:30:44] Phani Krishna - Outskill: There you go, we... you will be able to see the chat, yeah.

[04:30:49] **Shantanu Tungare:** It's so much fun that the age, it's such an age where, internet is letting our voice travel across the globe. I see people from across the globe today. Strange that all of them have this one excitement about learning AI, right? I think this is a two-day mastermind, right? And this is the final session.

[04:31:07] Phani Krishna - Outskill: Yes.

[04:31:08] **Shantanu Tungare:** Wow.

[04:31:09] **Shantanu Tungare:** Amazing time to be, in red.

[04:31:12] **Shantanu Tungare:** So many new tools coming in.

[04:31:15] **Shantanu Tungare:** Completely new technology has come in. Like, imagine a few hundred years ago, when electricity had come in, people must have flipped, right? Even the phone or the television.

[04:31:26] **Shantanu Tungare:** Now that we're living in this kind of a world, it feels like, okay, fine, AI. I mean, of course, for Funny, Weber, all of you guys, we and us, we have been living in the AI world, so it's fine, but if for somebody who's adopting to this, it must be getting very overwhelming at this stage.

[04:31:42] Phani Krishna - Outskill: we were actually teaching them, you know, multiple things around prompting, text generation models. We went deep into Claude as well today, in terms of explaining them connectors and all of that, and what surprises me even today is how people are not

[04:31:56] Phani Krishna - Outskill: aware of, you know, all of these possibilities, and now I'm very excited, to see how they would react to image and video generation part of it.

[04:32:07] **Shantanu Tungare:** I know, I know. Yeah, I mean, I'm super excited to be taking people through, because every week, we... because of our clients and the IP work that we have been doing, we are always exposed to new tools. It's getting so hard to catch up, man, but...

[04:32:21] **Shantanu Tungare:** We have a fundamental, like, all the part of my team, we make sure that we,

- [04:32:26] **Shantanu Tungare:** focus on the storytelling aspect of things, so even if these AI tools have come in, I make sure that my team writes the script and tells their first story, because there are... since the tools have been democratized.
- [04:32:38] **Shantanu Tungare:** everybody can make a beautiful-looking video. And I keep on saying that, but that beautiful-looking video, or any... something which is, like, just one prompt and a video out, is not going to cut it out for the long run.
- [04:32:51] **Shantanu Tungare:** What is going to cut out this entire noise is if you have a very strong personal narrative, and the narrative which you want
- [04:33:00] **Shantanu Tungare:** your particular content to have, alright? Storytelling is not random. Storytelling requires a particular technology. It is a technology in general. I call it a technology because it travels with the current technology.
- [04:33:14] **Shantanu Tungare:** And then gets amplified, because if the technology is too complex, nobody is interested. So if you attach a layer of storytelling on top of that, suddenly that technology travels really fast. This is what happened with Transformers, right? This is what happened with ChatGPT.
- [04:33:30] **Shantanu Tungare:** All of us started using it, because it got very easy, and a story was told to us that AI will now do a lot of things.
- [04:33:37] **Shantanu Tungare:** So that storytelling is what we are going to speak about, create a video, of course, but I'm making... but I want people to basically go into the depth of things, because I'm sure, I had a glimpse of, Weber's session yesterday, a glimpse of Dilip's session also. Everything is, technical, but everything is useful.
- [04:33:56] **Shantanu Tungare:** This particular session is for us to combine all of that knowledge, build your own personal story, what are you going to do with that knowledge, and also understand diffusion models and how do you create content. So I think this particular session will summarize all the learnings that people have had.
- [04:34:12] Phani Krishna - Outskill: Exactly, and I'm super excited for it. Folks, I mean, Shantanu, I think over to you at this point of time. People who are putting the same message multiple times on the chat, this is a session that is creative. We would like to keep the chat open, but it will get difficult for us to keep it open if anybody spams, so please don't spam. That's all, Shantanu.
- [04:34:33] **Shantanu Tungare:** Awesome, thank you so much, Fani. For people who think that background is AI, background is not AI, I've been blessed with a very beautiful view. I stay just outside Mumbai, and we are facing the national park.
- [04:34:43] **Shantanu Tungare:** What a crazy time. I was lucky to find this particular house. Alright, so quickly, let's get going. I'm sure you guys must have had a lot of technical conversations, a lot of in-depth... I mean, all the mentors are phenomenal.
- [04:34:56] **Shantanu Tungare:** So let's get very creative. Before getting very creative, let's try to understand exactly what creativity is, and exactly what is the difference between us and
- [04:35:07] **Shantanu Tungare:** Humans. Now, us and AI. Sorry about that. What is the difference between AI and us? Alright? That is something which I want you guys to tell me before I quickly get going. While you think about it and type it in the chat.
- [04:35:19] **Shantanu Tungare:** Just let's go through one second... the slide, yeah.
- [04:35:28] **Shantanu Tungare:** Tell me, fellows, let's have a conversation.
- [04:35:32] **Shantanu Tungare:** Emotions.
- [04:35:33] **Shantanu Tungare:** We have emotions, emotions, okay, fine, okay, okay, that's fine.

[04:35:39] **Shantanu Tungare:** Yeah, I mean, AI is getting in a stage where it can have emotional conversations with you, but not necessarily feel it. I have mapped that entire thing, and I'm going to take you through that first before we begin, because that seems to be very important in this day and age. For people who have just joined, I asked a question...

[04:35:59] **Shantanu Tungare:** and AI. What is the exact difference?

[04:36:03] **Shantanu Tungare:** Yeah, feelings... okay, good, good. Perfect.

[04:36:07] **Shantanu Tungare:** Good. So, this is something which we need to speak about. Of course, there are many tools which right now generate a lot of things together, but when it comes to storytelling, that requires a clear understanding of what we like, what we do not like, what kind of feelings you want to orchestrate. When I say feelings you want to orchestrate, meaning

[04:36:24] **Shantanu Tungare:** If you see a particular film which is really well made, it creates a certain emotion inside you, and you keep on thinking about it. Sometimes, we model ourselves according to the heroes that we watch.

[04:36:34] **Shantanu Tungare:** According to the heroines that we watch on our series, in our films, you know, so that is very important for us to understand that what exactly is causing that influence on us. Why I speak of influence of content in this day and age is because AI has made that influence go multifold.

[04:36:53] **Shantanu Tungare:** You can now make content in volume. So if a big corporation, or if somebody who has ulterior motives decides to

[04:37:01] **Shantanu Tungare:** you know, change your perception, they can just hammer you with thousands of content pieces, and suddenly you will be molded into buying a particular product. That is what advertising is, alright?

[04:37:13] **Shantanu Tungare:** volume has increased. So it is very essential for us to keep on going back to a question of what is the exact difference between an AI and exact difference between a human. And I've tried to map it, and I figured out that humans are very emotional, like some of you said, intuitive.

[04:37:32] **Shantanu Tungare:** We do not understand where intuition comes from.

[04:37:36] **Shantanu Tungare:** Thankfully, we do not understand that, because if that we get... we understand where it comes from, we will commoditize that as well, alright? So we don't want to do that. There are many blind spots which us as humanity has.

[04:37:47] **Shantanu Tungare:** Alright, and we are, we are experiential. We learn through our experiences, similar to AI, and we attach meaning or attach symbols to everything that we do.

[04:37:58] **Shantanu Tungare:** AI, on the other hand, is very statistical, pattern-based, you must have realized that, contextual, and it is scalable.

[04:38:05] **Shantanu Tungare:** Now, both of these elements are complementary, they are not replacing each other.

[04:38:11] **Shantanu Tungare:** AI does not understand intuition. AI cannot understand your lived experience. But if you want to amplify that particular emotion, you can move to AI. That is what it means by being human in the center, and using AI to scale it. This is the fundamental part of also being... whatever you do, but also being creative.

[04:38:29] **Shantanu Tungare:** This is very, very essential. Before I also begin, I would like to give you guys a particular mantra.

[04:38:36] **Shantanu Tungare:** Whatever you must have learned, whatever tools you must have learned in these two days.

- [04:38:43] **Shantanu Tungare:** You have to understand that just adopting to AI without a use case, like many of the mentors must have told you, AI makes absolute no sense.
- [04:38:51] **Shantanu Tungare:** So, how do you adopt, and what do you adopt? You have to automate the noise part of it. Whatever job you do, whatever you do, automate the noise. In my filmmaking world, the noise was coming up with many ideas which I can choose from. Noise was approaching many writers to elaborate the script, approaching a storyboard artist to design the script. So all the noise used to increase my turnaround time, alright? So, that is something which I would love to automate. I do not
- [04:39:16] **Shantanu Tungare:** automate the ideation aspect of things, or the intuition aspect of things. Humanize the content, which means whatever product, whatever service, or even a film, or a series, whatever content you create, or whatever you have to offer to the other people, make sure you put your lived experience in that.
- [04:39:33] **Shantanu Tungare:** Alright? Once that happens, that is when you are free to tell a story of whatever product you have, or service you have, you yourself as a personal brand, or whatever films or series you do. So, in the AI world, this is the particular thing which I hammer down everybody's throats most of the times, because this is very important.
- [04:39:51] **Shantanu Tungare:** You have to automate the noise, then you humanize the content, and then you're free to tell a story, alright? So, let's... with that base, let's begin, because this is going to be supremely creative. Today's session, of course, is AI filmmaking. I will take you through the filmmaking part of things.
- [04:40:06] **Shantanu Tungare:** But you guys have to decide what you want to use it for. Creation of images, product mockups, whatever you guys want to design it for. I'm going to take you through the
- [04:40:15] **Shantanu Tungare:** top line of everything, which is human creativity in the age of AI. I'm Shantanu Tungare. For people who do not know, I'm a filmmaker, I am making a lot of IPs.
- [04:40:25] **Shantanu Tungare:** When I say IPs, meaning multiple new content in the AI world using the complete AI infrastructure of my company. And I am a narrative strategist, which means I help companies, corporations, UHNIs, HNIs, to come up with their go-to market stories. It's different than brand storytelling, it is more like building a certain perception about you.
- [04:40:48] **Shantanu Tungare:** Which travels organically. It's a longer-drawn game, similar to how politicians also approach it. You have to build a particular narrative.
- [04:40:55] **Shantanu Tungare:** So I help, brands, and as I said before, multiple corporations, UHNIs, HNIs, to do, but filmmaking is something which is the tool.
- [04:41:04] **Shantanu Tungare:** Which is the medium that I have adopted. In this medium right now, I have adopted the AI.
- [04:41:10] **Shantanu Tungare:** tool, because it is amplifying me, and I can scale my content, alright? So this is, who I am. I have, trained, as I said before, more than, like, not said before, but I've trained more than a lag professionals, thanks to working with Outskill.
- [04:41:27] **Shantanu Tungare:** why they have chosen me to train you guys, because we already have a running company built on AI infrastructure. We have come from live-action filmmaking to adopting ourselves into AI infrastructure services, servicing multiple brands at this stage, along with that, building IPs, like I said before. I have a newsletter called as AI with a Side Eye, where I look at technology with a side-eye. It's very cool, where I keep on speaking about

- [04:41:52] **Shantanu Tungare:** my field notes about how do I stay human when everything is automated. I've been a speaker at multiple platforms, multiple newspapers, you can see them. I've been part of multiple businesses, predominantly media businesses, to understand that we are in a very big shift at this stage, alright? This is some of the snapshots of some of our work. You must be knowing from some of these Bollywood films and Amazon
- [04:42:17] **Shantanu Tungare:** on Netflix series.
- [04:42:19] **Shantanu Tungare:** All of them we are right now building, IPs for, which is content for, using the AI infrastructure. Our business is 50-50.
- [04:42:27] **Shantanu Tungare:** 50% of live-action production, and 50% of AI, but frankly, the entire business is moving more towards AI, because clients definitely want to reduce the cost involved, and they want to reduce the turnaround time involved. So it is a very strange flux into the business at this stage. Every week, something new comes up, like I said before, and I get to share those learnings with you all, so super happy about that.
- [04:42:51] **Shantanu Tungare:** I handle the new IP and branding vertical, of course.
- [04:42:54] **Shantanu Tungare:** This is something which I've been building, called as Ancient Indian Billionaires. Now, I have a narrative. Like I said before, I have my personal narrative, which is like an anchor to whatever content I create. The anchor is that I want to rebrand India.
- [04:43:08] **Shantanu Tungare:** From the different stereotypes that India has, and this is something which drives all my decisions in whatever IPs I create, or whatever brands I also work with. So this is something where I went through... I've been wanting to build this particular series, but no producer was giving me money.
- [04:43:25] **Shantanu Tungare:** So, there was a time when AI came in. So, I dug deep into the research about exactly what was India. If we talk about India being, like, a supreme civilization before, then exactly what it was.
- [04:43:34] **Shantanu Tungare:** So that depth, I got into, after, using the AI tools, and,
- [04:43:41] **Shantanu Tungare:** This is one series which is now funded. We have a 3-year runway, close to a million dollars, which we are building into a film series, games, and live action also. You'll see a lot of content coming in. In fact, I'll show you a small snippet, while you guys select what you guys want to do, of a sponsored post that I've been doing. You'll get an idea about the glimpse of what exactly is Ancient Indian Billionaires, alright?
- [04:44:04] **Shantanu Tungare:** This is part of my style called as Mythic Futurism. You should see the teasers, of course, but these are old AI. I'll show you something which I recently did, using the complete AI infrastructure. It's phenomenal, alright? If you are into this particular session, you don't have to create this massive content or big narratives, although I urge you guys to do it, but
- [04:44:27] **Shantanu Tungare:** If you have very specific use case, this particular session will help you use the LLMs so that you can become a proper writer, a visual strategist, where you understand different diffusion models and use them for your own benefit. You can own your own agency, where I'll tell you all the tools that my agency is using.
- [04:44:43] **Shantanu Tungare:** And at the same point of time, you can build a complete film, alright?
- [04:44:48] **Shantanu Tungare:** Which is the final end game, because storytelling is something, if AI can reach a live-action filmmaking, then AI is in a very good space, and that is something which I would love to show you all.
- [04:45:00] **Shantanu Tungare:** You can create product mockups, social media visuals, investor pitch decks, event posters, all of this will be covered between the entire umbrella content creation that I'm going to tell you all.

- [04:45:12] **Shantanu Tungare:** Today's session is divided into four parts. Now, generally, the Western Act structure is where there is a hero, the hero goes through a crisis, and the hero wins.
- [04:45:21] **Shantanu Tungare:** The Indian Act structure is there is a hero, the hero goes through a crisis, the hero wins, and then the hero sits and contemplates at what cost he won.
- [04:45:31] **Shantanu Tungare:** Alright? So that contemplation is what caused the depth in Indian storytelling. That's why Ramayan and Mahabharat have traveled since centuries and millennia, alright? So that is a part of the research that I've figured. So today's session also I've divided and tried to take from that knowledge. The first time where you'll understand how do you become a brand strategist, content writer, and a creative director, because those tools will be very clear for you.
- [04:45:54] **Shantanu Tungare:** Then...
- [04:45:56] **Shantanu Tungare:** In the second, act, you will see the diffusion models, and we'll select the right diffusion models to create our content. Third, where we'll bring it all together, and fourth is where you are going to sit and think, what are you going to use this knowledge for?
- [04:46:12] **Shantanu Tungare:** This is the forex structure that you are going to follow. I'll take you through everything, but it is completely up to you what are you going to use this knowledge for, and not just for this session, for all these two-day sessions that you guys have done. Alright, the base things which we are going to use, like, the main technology that we are going to use.
- [04:46:30] **Shantanu Tungare:** is diffusion models today. Now, diffusion models function in this way. You can feel free to take a screenshot.
- [04:46:35] **Shantanu Tungare:** Diffusion models start off with pure noise, alright? And then with your prompts, the noise is removed, alright? When the noise is removed, refinement happens, and more details get added, and the final image comes in, alright? So this is the base of diffusion models, sort of crushing the images, or bringing all the images together, and quickly denoising all of that.
- [04:46:56] **Shantanu Tungare:** Why there are multiple diffusion models is because of the point 4, if you see here. This is the... where... where aesthetic detail matters. When I say aesthetic details, you will like something, I will like something. Our likes might not match, alright? So that is when you need to select your favorite diffusion models, which gives out or appeals to your particular aesthetic.
- [04:47:18] **Shantanu Tungare:** Hence, it is not one prompt and an output out there. You have to be actively involved. That is what human in the center means, alright? So I hope that is very clear for y'all. Feel free to just... I'm going to just see if you guys are understanding. Are you guys understanding, all of this? Are you getting an idea?
- [04:47:38] **Shantanu Tungare:** Alright? Good, good. So I... if the base is set, let's now move ahead. Alright, somebody's saying repeat. I can't repeat 15 minutes, but I hope all of you guys are, if you're not very clear at this stage, no problem. As and when we move ahead, it is as simple as creating content, but with meaning.
- [04:47:56] **Shantanu Tungare:** Alright? That is what I wanted to tell y'all. Create content, but with meaning. Simple. We are using diffusion models as a technology. For people who have understood in depth, perfect, no problem. For people who do not have not understood in depth, no problem. As we move ahead in the session, you'll get an idea. Alright?
- [04:48:14] **Shantanu Tungare:** Cool, I am not here to create... make a content creator out of you. Of course, you can become one, no judgments there, but you will be a slave to the algorithm, because the algorithm is ruthless. You have to keep on putting in content.
- [04:48:26] **Shantanu Tungare:** I'm here to tell you to become a storyteller. When you are a storyteller, you basically have more depth in whatever you do. Alright, so now, let's learn a process of how do you model these diffusion models according to your interests. So quickly.

- [04:48:39] **Shantanu Tungare:** Write down what is the one thing that nobody else does, what is your earliest memory that shaped you, and what is your North Star. Take a screenshot of this if you want to do it later, no problem, but this is very essential. Remember, in the previous sessions, you must have been told that the LLM has to be modeled according to you. If you don't want to go through those technical details, you're juggling between multiple LLMs, this particular knowledge about yourself will help you model the LLMs.
- [04:49:03] **Shantanu Tungare:** LLMs meaning ChatGPT, Claude, Gemini, Grok, all of them, according to yourself. So quickly, write it down, don't need to tell me. No problem, alright? If you want to know yourself in depth and use the diffusion models perfectly, alright? According... where they will
- [04:49:19] **Shantanu Tungare:** precisely give you the answers according to what you want. I have designed a 7-day interview with the LLM.
- [04:49:25] **Shantanu Tungare:** You have this conversation every day for 10 minutes with the LLM, and then by the end of it, you will get a nice blueprint. Take that as a Word document, or a Markdown file, and use it in whatever LLM you use.
- [04:49:37] **Shantanu Tungare:** Alright? That will really help. You can add in your details also how you want the LLM to respond to you, but knowing yourself is very important if you are doing anything to do with creativity. Otherwise, you are just rehashing what everybody else has done, alright? So quickly take a screenshot, I'll in which share these drive links with you, alright?
- [04:49:55] **Shantanu Tungare:** Good. So now, the entire thing is set for y'all. I'll quickly take you guys through all of this later, but tell me, fellows, what do you feel like doing? You want to create an ad, or you want to create a movie teaser today? What kind of audience do we have today?
- [04:50:13] **Shantanu Tungare:** You take your time, no problem. Till that time, I'll tell you exactly what I've been doing so that you get an idea. So, what I've done is, using AI, I have managed to, along with the client work and the personal IPs that I've been doing, I've been managed to scale my content needs in terms of my personal brand really, really, like, fast, alright, using multiple tools.
- [04:50:34] **Shantanu Tungare:** So, I've been speaking to many, like, if you are from India, you'll understand, Digaj, like, intellectual elites.
- [04:50:42] **Shantanu Tungare:** in the AI world and in global narrative space, for a very long time, and I've managed to get guests of really, like, cool people. When I say cool, meaning, again, I'm saying intellectual elites who will
- [04:50:56] **Shantanu Tungare:** add a lot of value to you if you listen to their particular podcast. So, one of the person whom I have spoken to is Mr. Simon Anholt. He's the person who helps prime ministers, kings, presidents to basically
- [04:51:10] **Shantanu Tungare:** brand a particular nation. So he's a very big deal, so I've had a conversation with him. All of this is parked on my YouTube. I'm going to share the links with you any which ways. The next one whom I'm speaking to, or who I've already spoken to, is Miss Agnieska Pilat.
- [04:51:24] **Shantanu Tungare:** She's... lives in the heart of...
- [04:51:26] **Shantanu Tungare:** Silicon Valley, and you know who her clients are. Her clients are SpaceX, Boston Dynamics, and many of the Silicon Valley unicorns. What they do is they give her the complex technology, and she paints or adds a story to them, alright? So the philosophical layer is what she's adding to these
- [04:51:46] **Shantanu Tungare:** machines, and she's the one who says that machines are the new ruling class. So, I had a crazy conversation with her as well. The next conversation which I had was with Dr. Merit Moon. Now, she's the one who is a quantum physicist.

[04:52:02] **Shantanu Tungare:** teaches in Abu Dhabi, and also a ballerina. She dances with robots, so I've managed to have conversations with such intellectual elites, and all of those conversations will be parked on my YouTube and my LinkedIn. So, I hope you guys, while you're selecting, just subscribe to my channel and follow me. I'm going to quickly share my links with y'all, so that you can enlighten yourself with so much of content that I've been doing.

[04:52:27] **Shantanu Tungare:** doing, and this will really help you in the AI age. This will really help you. It has helped me. That conversation has helped me. That's the reason why I would love to share that knowledge with y'all.

[04:52:36] **Shantanu Tungare:** Alright, just dropping in my links, fellows.

[04:52:39] **Shantanu Tungare:** Yep.

[04:52:47] **Shantanu Tungare:** Cool, feel free to subscribe and follow. Alright, so, what is the final verdict?

[04:52:53] **Shantanu Tungare:** What do we have?

[04:52:57] **Shantanu Tungare:** Tell me, Velos...

[04:53:00] Phani Krishna - Outskill: We have about 55% of the people saying a teaser, and 45% saying an ad.

[04:53:06] **Shantanu Tungare:** mostly Sunday people want to do something to do with movies and series. That will be nice, as long as people start also brainstorming with me. So, if we have decided that, we have done some really cool stuff in our previous sessions. Funny was witness to all of them.

[04:53:22] **Shantanu Tungare:** He's been my co-host since, like, more than a year, and we have actually changed the game in terms of AI filmmaking together. And today.

[04:53:31] **Shantanu Tungare:** me being your director, you being my team, let's build something from scratch. I'm going to give you two thought starters. Think of something to do with youth.

[04:53:40] **Shantanu Tungare:** Alright? And think of some... when you... when I say youth, you can think of something like a Gen Z or a Gen Alpha also. Think of, something to do with,

[04:53:50] **Shantanu Tungare:** Yeah, just youth. Why don't you put out whatever you guys feel like the first idea which pops into your head into the chat box, so we can just quickly brainstorm. I'm not going to, directly move to an LLM. This is where... this is very important for us to brainstorm, alright?

[04:54:09] **Shantanu Tungare:** What do we have?

[04:54:10] **Shantanu Tungare:** Cool clothing, bent tenties are nice. Nice, nice.

[04:54:16] **Shantanu Tungare:** Youth CJP protest? No, not really. Let's not go political, plus I don't like cockroaches, so what's the idea? What's the plan? Alright, so what do we have? Gaming? Okay, gaming. We had done Mario, who travels to Indus Valley Civilization.

[04:54:29] **Shantanu Tungare:** My nephew was playing God of War the other day, but think of something to do with, something which has more of an impact, alright?

[04:54:37] **Shantanu Tungare:** Roblox.

[04:54:39] **Shantanu Tungare:** Roblox is good. You guys are familiar with Roblox? Roblox is good. Not sure if all the audience understands Roblox.

[04:54:48] **Shantanu Tungare:** Memes.

[04:54:50] **Shantanu Tungare:** Come on, fellows, type in, type in whatever you feel like.

[04:54:54] **Shantanu Tungare:** Alright, we have... Or somebody's, type BGMI. BGMI is also one of my clients.

[04:55:01] **Shantanu Tungare:** Burger, music, hmm, interesting.

[04:55:04] **Shantanu Tungare:** Okay, He-Man has come in. You wanna do something to do with He-Man? I think one of the sessions we did Barbie traveling to Kurukshedrar during the Mahabharat time, so that was pretty cool.

[04:55:14] **Shantanu Tungare:** What do we have?

[04:55:20] **Shantanu Tungare:** Shaktima, ninja. Ninja, interesting. Ninja. Okay, Ninja for the bike?

[04:55:28] **Shantanu Tungare:** Or just Ninja in general?

[04:55:31] **Shantanu Tungare:** Okay, let's give 10 more seconds and brainstorm. Of course, thousands of people here, we won't be able to come to a conclusion, but I'm looking at each and everybody's... whatever idea sticks to me. Pokemon! Pokemon India, you wanna do?

[04:55:45] **Shantanu Tungare:** F1 we have already done.

[04:55:50] **Shantanu Tungare:** Alright, good. Power Rangers, nice. GTA 6. Star Trek, one of my favorites.

[04:55:59] **Shantanu Tungare:** Hot Wheels, we have already done. Okay, 10 more seconds. You guys are getting creative.

[04:56:04] **Shantanu Tungare:** Okay, good, good. So, these are... these are all the... let's say, for example, Star Trek is there, but...

[04:56:10] **Shantanu Tungare:** What if the people from Star Trek traveled through different,

[04:56:14] **Shantanu Tungare:** Indian cosmologies. No, let more ideas come in, okay? More ideas. Africa, Cocomelon, nice, how cute, yeah.

[04:56:22] **Shantanu Tungare:** Time travel, go to life, okay, let's move, let's go, let's go, alright. So what we'll now do, let's say, for example, you have an idea like that, let's say, for example, youth, something to do with youth, something to do with Star Trek, something to do with Roblox, if you get certain glimpses, the creativity or the main idea does not come in in one concept note, it never comes in. But if you want to do something like that, so our creativity right now is that we want to create

[04:56:47] **Shantanu Tungare:** something where we understand the tools also. At the same point of time, it excites us by the end of the session also. So let's start brainstorming. For brainstorming, what I do, I travel between multiple LLMs. So let's start right now.

[04:57:00] **Shantanu Tungare:** Let's not use Opus 4.8, because we don't need such a high, we don't need such, like, a high tokenized version of this model. Let's go for Sonnet 4.6, good enough.

[04:57:12] **Shantanu Tungare:** effort, we should keep on high, because I want the AI to push itself. Alright, so let's, quickly...

[04:57:19] **Shantanu Tungare:** move forward.

[04:57:21] **Shantanu Tungare:** Okay, so now what I do, so remember the AI conversation, that I told you guys to have, the 7-day LLM conversation that I told you guys to have? Alright, so I have definitely had a conversation, like that. So what I did is just going to attach it to the chat box here. Alright, we are using Claude in the first go. If you want to model Claude according to you even more, just go to the settings part of it.

[04:57:45] **Shantanu Tungare:** and instruct Cloud, and give Cloud all the details here. Just copy-paste your complete narrative DNA, and you are in a very good space, alright? If you don't want to do that, you're juggling between multiple LLMs, have a document like this. I'm using a Markdown file, but a Word document is also fine, alright?

[04:58:02] **Shantanu Tungare:** read this Markdown file, please do not point out exactly what all the details are there, but you have to also understand that I'm taking a session live right now, my screen is presented, just read it, understand who I am at this stage, and I'm going to use you for brainstorming, and, please, hope you can

[04:58:23] **Shantanu Tungare:** speak to me by my name, because this is a shared LLM right now. Alright, so what I've done is just added this Markdown file here, and I am going to... I've also told it to

[04:58:36] **Shantanu Tungare:** Told it that this is a live session, alright? So it is now reading the Markdown file. Since we've kept on high, it will take its own little time. But what I'm going to do is,

[04:58:47] **Shantanu Tungare:** wait for a bit, okay? I'm going to keep the next prompt typed.

[04:58:52] **Shantanu Tungare:** I want to create a 30-second hour movie teaser, something to do with Star Trek, something to do with the youth, something to do with Roblox. But I wanted to give me 4 ideas, what it can be. The audience is really prepped up today, and they want to do some nice movie teaser

[04:59:09] **Shantanu Tungare:** But, we are stuck between these ideas. Just give 4 ideas, like I said before, with one line, which we can approve or disapprove. Alright? So now it has understood who I am, and I'm starting to brainstorm.

[04:59:23] **Shantanu Tungare:** Okay, if I'm starting to brainstorm, what I'm doing is giving Claude its own little time, but then I move to Mr. ChatGPT, because what I've realized is ChatGPT gives

[04:59:33] **Shantanu Tungare:** Really good, concepts. Alright, I also use a DeepSeek, because DeepSeek also does really good concepts, but I move between multiple LLMs. Never be loyal to any of the LLMs, alright? Because all of them are...

[04:59:45] **Shantanu Tungare:** have their performance going up and down on a monthly basis. So you have to use the LLM which is useful for yourself.

[04:59:53] **Shantanu Tungare:** I take a subscription of Claude, but this month I did not take the subscription, but I moved my entire team to use ChatGPT. One of my team members is using Gemini on a regular basis, so it depends on exactly what LLM works out for you. You have to choose what LLM works out for you, alright? So that is very important. So let's see what Claude has given in terms of the ideas.

[05:00:15] **Shantanu Tungare:** Okay? So it has given us 4 ideas, and now you fellows are going to help me choose. A Roblox kit builds a spaceship in-game, it actually launches. Okay.

[05:00:26] **Shantanu Tungare:** This is not even an idea. The Enterprise crew is 14 years old, and their entire universe is Roblox server. For people who do not know Roblox, Roblox is just like YouTube for games, alright? That's simply put. First contact with an alien civilization, turns out that they are playing Roblox with us for years.

[05:00:44] **Shantanu Tungare:** A Gen Zadd quit Starfleet Academy to run a Roblox empire until both worlds cried. You've read my Markdown file, you understand my Bharatri brand project. Can you give me 4 more ideas? These ideas are definitely not working. If you can't give me better ideas, I'm going to some other LLM.

[05:01:00] **Shantanu Tungare:** Just threaten the LLM a bit. I don't want you, guys to threaten the LLM in a crazy way, but you have to threaten the LLM so it gets an idea. So let's see what ChatGPT, has given us. The first Starship crew, both entire... built entirely inside a simulation.

[05:01:18] **Shantanu Tungare:** Must decide whether the real universe is worth living for. Okay. See, as I said before, ChatGPT generally does good ideas. Roblox2099. Teenager discovers that every Roblox world is actually a training ground for humanity's future colonists.

[05:01:34] **Shantanu Tungare:** Okay? Generation Warp.

[05:01:36] **Shantanu Tungare:** When Earth's youth gains access to a forbidden, faster-than-light network, they accidentally awaken something waiting between the stars, okay? The last playground. In the future, where adults have lost their ability to imagine the fate of humanity rests with a group of kids exploring a mysterious Roblox universe. I'm not liking any of the ideas. What do you guys think?

[05:01:57] **Shantanu Tungare:** You have any of the ideas you guys like?

[05:02:03] **Shantanu Tungare:** Yeah, they're kind of okay, they're not, like, great ideas, alright?

[05:02:08] **Shantanu Tungare:** Not liking any of the ideas, I... can you think, or go back to the drawing board? Think of something to do with youth. You can let go Roblox also. I like the Star Trek idea because it has cosmic value to it, but not necessarily the US Star Trek. But give me some more ideas,

[05:02:25] **Shantanu Tungare:** I can do a clothing brand as well, organic clothing brand, which makes a lot of sense, otherwise everybody's looking like K-pop stars these days. Alright, so, something like that. I'm just brainstorming with the LLM at this stage, but let's see. Shantanu understood, what do we have?

[05:02:41] **Shantanu Tungare:** Okay?

[05:02:44] **Shantanu Tungare:** What do we have?

[05:02:47] **Shantanu Tungare:** They've been playing roadblock, okay, okay. Let's see... you're asking your actual brand DNA, which goes beyond laugh and means, okay?

[05:02:55] **Shantanu Tungare:** No, let's think of, youth, let's think of something to do with jewelry, something to do with Star Trek, something to do with any of these, something which appeals to the youth. You understand what my narrative is, so why don't you give me more ideas? Go out of the box, again, give me four ideas, one liner.

[05:03:13] **Shantanu Tungare:** Alright, so this is me brainstorming. Right now, I want to do something not very clear. This is most of us, right? We are never clear as to what we like. But let's see, let's see what we get. Alright, and you guys need to tell me if at all it works.

[05:03:26] **Shantanu Tungare:** Okay, so what do we have? I think you're trying to solve two different things at once. A trailer that excites young people, a trailer that says something deeper about this generation. Okay, sure. Okay, what do we have as a first concept? So let's go through this first concept of ChatGPT. For the first time in human history, a generation grows up knowing they will witness humanity become a space-faring civilization.

[05:03:46] **Shantanu Tungare:** Alright, imagine a teaser with young people like Mumbai, Lagos, Tokyo, Sao Paulo, rockets launching, AI building things, and the narration goes, every generation inherited a world, ours inherits a frontier.

[05:04:00] **Shantanu Tungare:** Quite good line, what do you guys think?

[05:04:10] **Shantanu Tungare:** Yeah. Then what do we have? The last natural generation.

[05:04:17] **Shantanu Tungare:** Yeah. Okay, what do we have? The final generation born before AI...

[05:04:22] **Shantanu Tungare:** Genetic engineering and synthetic realities permanently challenge what it means to be human.

[05:04:28] **Shantanu Tungare:** Quite works.

[05:04:30] **Shantanu Tungare:** In the morning, I was having a conversation with my wife, and I asked her, what should we make today? And she's like, and she was changing diaper of my kid, and she's like, I want AI to do all of these things and not make art.

[05:04:42] **Shantanu Tungare:** So I just shut up and came back to this room. Anyway, so let's move ahead, let's see what we have. Roots. K-pop made the world rest the same. One generation decides to remember where they came from.

[05:04:52] **Shantanu Tungare:** Not patriotic, chest-thumping, more cultural confidence, cotton fields, etc, etc. Okay, the star children. I like the name. While previous generations look down at screens, this generation looks up at the stars. Young people, flying drones, AI labs, mountain peaks, space imagery.

[05:05:08] **Shantanu Tungare:** almost a rejection of cynicism. We were not born to scroll, we were born to explore. What a great line. I see it's also like Star Children, only because this is the ChatGPT that I've been using. This is my ChatGPT. It understands what I like. So it really helps to put in all the details. Now, I put in ChatGPT all the details anyway, which was in its memory, so that's why I quite like this idea, but I'm going to also see what

[05:05:33] **Shantanu Tungare:** Mr. Claude is giving us. A teen ancient temple jewelry turns out to be a Starfleet communicator. Always was.

[05:05:42] **Shantanu Tungare:** Okay? The most powerful weapon in the galaxy isn't a phaser, it's a necklace from Rajasthan.

[05:05:48] **Shantanu Tungare:** She trades her grandmother's gold for crypto, the galaxy weeps. An alien civilization worships one artifact, it's a Kundan piece from 3000 BC. I think it's a bit tone-deaf, not really happy with this, so let's go to Mr. ChatGPT, because the ideas are better.

[05:06:04] **Shantanu Tungare:** So, between Children of the Sun, the last natural generation, Roots, and the Star Children, 1, 2, 3, 4, which one do you guys like? Tell me in the chat.

[05:06:15] **Shantanu Tungare:** Sheep.

[05:06:17] **Shantanu Tungare:** All of you seem to have starting to like the Star Children also.

[05:06:20] **Shantanu Tungare:** 3 is also nice. 3 is also nice. Alright, so what we will do, sometimes what happens, is it really helps for us to understand if this idea is in a good space or not. Now, pre-AI, we used to build the entire script, and then we used to decide exactly if this is in a good space or not.

[05:06:37] **Shantanu Tungare:** But now what I've done is start adding a visual directly. So what I do, if I'm using a chat GPT, let's create an image. If you see here, let's create an image.

[05:06:48] **Shantanu Tungare:** Okay?

[05:06:49] **Shantanu Tungare:** Alright, and most of the people here are, liking...

[05:06:55] **Shantanu Tungare:** the star children. Can you build a really cool poster which will appeal to the Gen Z and the young audience at the same point of time, appeal to the masses, in different age brackets? Make, like, a nice,

[05:07:10] **Shantanu Tungare:** Bollywood-style poster, also Hollywood elements to it, but with Indian characters. Actually, global characters. Let's do a global poster and global characters, and yeah, please...

[05:07:22] **Shantanu Tungare:** So what I do here is generally put in, before elaborating anything or wasting my time, I quickly get the LLMs to show me what exactly the visualization would look like. That is when I can save time, when I later, if I start elaborating the idea.

[05:07:40] **Shantanu Tungare:** Maybe it works, maybe it doesn't work. Alright, so making a poster like that, okay, really helps. Sometimes I go from a text to video also. If we like the poster of the Star Children, Star Children is a really good name. The Star Children.

[05:07:54] **Shantanu Tungare:** Alright, so it'll be a nice series. So let's see what... we can also make it anime style, though. You guys want to do anime style?

[05:08:04] **Shantanu Tungare:** Let's try, at least. Let's see, we don't have to necessarily stick to everything.

[05:08:09] **Shantanu Tungare:** Somebody's saying a hard no, okay, I understand. But let's try, at least. This is a brainstorming phase, no judgments, even the idea is really bad. Never be judgmental with yourself, otherwise you'll end up making nothing. Let's see what the poster is. Oh, interesting. What do you guys think?

[05:08:24] **Shantanu Tungare:** You guys liking it?

[05:08:26] **Shantanu Tungare:** Beautiful, right?

[05:08:30] **Shantanu Tungare:** The Star Children, we thought of an idea.

[05:08:32] **Shantanu Tungare:** And the poster is ready. Imagine going to a producer and telling that we are ready with the entire poster, give us money, the producer will be more than happy to give us money. Let's see what we have. We were not born to scroll, we were born to explore.

[05:08:45] **Shantanu Tungare:** Very nice. The Star Children, a new generation, a limitless, a limitless universe, coming soon. Explore, create, unite, inspire. Mumbai, New York, Lagos, Tokyo, London, Sao Paulo, Sydney, Wah.

[05:09:00] **Shantanu Tungare:** quite global.

[05:09:04] **Shantanu Tungare:** No, I'm not an ODR, for people who are asking.

[05:09:07] **Shantanu Tungare:** Akshay is giving a nice name, Nandantari. Very nice.

[05:09:11] **Shantanu Tungare:** Okay.

[05:09:12] **Shantanu Tungare:** Good, I think we are in a good space. Let's build the script.

[05:09:17] **Shantanu Tungare:** I like the Star Children. Let's build a voiceover script for the Star Children. Of course, there needs to be one dialogue.

[05:09:24] **Shantanu Tungare:** Which builds... but it should be emotionally heavy. Right now, the story is not set, but the story should have a particular crisis to it. So, go through all the first principles of building a particular story trailer, or a teaser, which is of a 30-second, and then think really hard.

[05:09:43] **Shantanu Tungare:** thing as if this ad is shown in any of the Super Bowls or the IPL matches, people should watch it.

[05:09:51] **Shantanu Tungare:** And then give me a voiceover script. I do not want you to give me a visual script, just the voiceover script, which I can approve, which leads to, in the end, the star children. I really like the poster. Don't forget the look and feel of this.

[05:10:05] **Shantanu Tungare:** Alright, so let's move ahead. Now, what do I do? Because I like the poster, what I've done, I'm now moving ahead and asking ChatGPT to build me a script. Now, it's asking me, before writing the view, I think there's one thing missing.

[05:10:17] **Shantanu Tungare:** The poster is about a generation that has been underestimated. Space is only a metaphor. If you make crisis, an asteroid is coming, Earth is dying, it becomes another sci-fi film. ChatGPT is acting intelligent only and only

[05:10:31] **Shantanu Tungare:** Not because it is intelligent, it's because I've spent a lot of time building its memory, alright, by having a conversation constantly, and that's when it knows that I don't need a yes-man or a sycophantic chat box. I need something which I can brainstorm with. So this really helps. The 7-day LLM conversation really helps. Let's go through the script. There was a time

[05:10:51] **Shantanu Tungare:** I like that. Most of my, ancient Indian Billionaires trailers start off with, there was a time. There was a time when generation was told they would change the world, then came hours, the generation of scrolling, the generation of distractions, the generation... everyone stopped believing in it.

[05:11:08] **Shantanu Tungare:** They said we look down too much, then we dream too little.

[05:11:12] **Shantanu Tungare:** that we would never build anything greater than ourselves. They were wrong. Because while the world was busy counting our screen time, we were learning the language of machines, building words that do not exist, preparing for a future no generation had ever seen. And then humanity looked up at the stars once again. It would not be kings or governments or billionaires who answered the call, it would be children.

[05:11:38] **Shantanu Tungare:** What do you guys think?

[05:11:42] **Shantanu Tungare:** quite decent a script, right? At least made us feel something. Of course, we spend more time than this script will be even hard-hitting, but this is in a good space, at least for the first cut, alright? At least for the first cut.

[05:11:54] **Shantanu Tungare:** This is what clarity of instructions and clarity of thoughts, and using the right tool gets you to. Idea from scratch, we started off with youth, and now we have a full-fledged poster and a script in a matter of few minutes, alright? Clarity of thought and understanding the right tool is the new

[05:12:13] **Shantanu Tungare:** is the new way of being human. So make sure that you do that, alright? So, what do we have?

[05:12:20] **Shantanu Tungare:** I like this,

[05:12:22] **Shantanu Tungare:** script. I like the script a lot, honestly, but I feel it's a bit too huge. Now, what I want you to do is just give me a shorter script, and then I can, probably take this ahead. I would love for this to be a great movie, but,

[05:12:38] **Shantanu Tungare:** Let's build a proper shorter script, and also give me some visual directions which I can course-correct and alter having a conversation with you. So now what I'm doing, since I like the voiceover and I understand the overall look and feel and the narrative of the entire film, which is the star children.

[05:12:55] **Shantanu Tungare:** This name is really nice. Alright, so what I'm doing is just seeing exactly how the script can flow. For years, they told us to stop looking at screens, but nobody asked what we were looking at. We weren't

[05:13:08] **Shantanu Tungare:** escaping the future, we were building it, and then humanity reached for the stars again. It wasn't the old world that answered, it was us, the star children. Alright, and there's even more cinematic version, every generation inherits a world.

[05:13:21] **Shantanu Tungare:** Ours inherited a question. What comes next? While everyone else was looking down, we looked up. The star children.

[05:13:30] **Shantanu Tungare:** You guys like this shorter script? What do you guys think?

[05:13:41] **Shantanu Tungare:** Who's asking again and again, is this a paid of ChatGPT or free paid of... relax. This is something which I got, I think a yearly subscription of ChatGPT. Stop asking free or paid. You have to start paying if you want your privacy to be maintained, and these are some small money, which you have to spend if you want to be AI native in whatever work you do. So, let's not have that conversation.

[05:14:05] **Shantanu Tungare:** I'm using most of the tools which I'm using are paid tools. I use the LLMs. One, I pay for the LLM, the other LLMs are used for free, right? None of the diffusion models are used for free, because I don't want my content and my clients to go through copyright. So, let's put an end to that debate right now.

[05:14:22] **Shantanu Tungare:** Okay, let's, move ahead.

[05:14:27] **Shantanu Tungare:** Good. Let's move, and I think I like this particular script. Now is the time when we are more or less clear with what script we have. We are more or less with a very nice, poster here.

[05:14:41] **Shantanu Tungare:** I'll just download this poster, maybe I will use it. The star children, which means the star children. T's...

[05:14:49] **Shantanu Tungare:** TSC.

[05:14:51] **Shantanu Tungare:** Okay? And let's download the poster, we're gonna use it later. Anyways, now I'm going to take you guys through the next step of...

[05:14:57] **Shantanu Tungare:** exactly what happens and what are we planning to do, alright? We are into the pre-production phase where we brainstorm, alright? In our filmmaking world, we also brainstorm exactly like how we are doing it now. Here, we have thousands of them, but we have a close group of team whom we brainstorm and come up with an idea.

[05:15:14] **Shantanu Tungare:** Then, once our idea is set, and we understand what narrative it will hold onto, what impact it will have, that is when we move and elaborate that entire script, similar to what we have done. Then we build it into a screenplay. When I say screenplay, which means

[05:15:28] **Shantanu Tungare:** We'll add visual details to the entire dialogue. Similar to the voiceover that we have, we add visual details. That screenplay, or the blueprint, acts as a...

[05:15:38] **Shantanu Tungare:** pushed to the next step, where if at all it's an ad, we approach a brand manager, if at all it is a particular movie, we approach a producer, and we tell them that this is the script, this is the money it will cost.

[05:15:50] **Shantanu Tungare:** please give us the money, alright? Then, once the budget is approved, we move into building that, or building a team together. A cameraman comes in, the lightmen come in, the hair, makeup, art, etc. Everybody comes in, actors, everybody comes in, and we start shooting it, alright? After the end of the shoot, we get the clips.

[05:16:09] **Shantanu Tungare:** It's shot on a camera, we get the clips, and then we move it into the edit phase. Now, the shoot can happen in few days, or at least, like, if it's a movie in a month or so, and the edit can go on for years.

[05:16:20] **Shantanu Tungare:** Because the main film happens into a particular edit, where you do multiple changes, you orchestrate the right emotions. Many of the times, what happens, we go through the edit process, and we realize that, oh, we've...

[05:16:33] **Shantanu Tungare:** We really needed this particular scene, which we hadn't accounted for.

[05:16:38] **Shantanu Tungare:** Now, what do we have to do? We have to go back to the brand manager or the producer, but they don't sanction the money, and now we, as producers, the executive producers, have to face that particular flak.

[05:16:50] **Shantanu Tungare:** In the AI world, that problem has been solved. So what do we do?

[05:16:55] **Shantanu Tungare:** If at all we decide to make some content.

[05:16:59] **Shantanu Tungare:** we can go back between these productions, pre-productions, and post-production phases. So, in the AI world, I've adopted the same process.

[05:17:09] **Shantanu Tungare:** Where we use multiple LLMs, we use different diffusion models for production, and we also use an AI agent, and of course, we also do edit on Premiere Pros of the world, or edits on all the edit tools.

[05:17:22] **Shantanu Tungare:** But we have made AI seep into multiple, all of these phases, which is pre-production, production, and post-production. So even if you feel that, okay, the final edit feels like this is something missing, I can go back to production.

[05:17:36] **Shantanu Tungare:** That does not happen into live production.

[05:17:39] **Shantanu Tungare:** That is the reason, and that is the big shift into the market. Live production is supremely expensive, takes a long time, and it is very good.

[05:17:47] **Shantanu Tungare:** It is very good, but AI is catching up only and only because it is helping save turnaround time, and it is helping save the budget.

[05:17:55] **Shantanu Tungare:** So, what we are following today is this particular framework, which is pre-production, production, and post-production. Right now, we have a script in our hand, okay? Now we are moving into the production phase, where we will use the diffusion models, so stay tuned for this, because this is very important for you guys to understand.

[05:18:12] **Shantanu Tungare:** Alright. Now, before we move to the diffusion models, I want to understand if you guys know how to speak to the diffusion models, alright? So tell me in the chat, fellows, what is the prompt that I must have put in to get this particular image?

[05:18:28] **Shantanu Tungare:** And now, don't type spaceship and Earth, spaceship on top of Earth, people wearing oxygen masks or something like that. You won't get a detailed image like this. There is a particular way you have to prompt, so tell me in the chat, I'm looking at the chat, for some of you might be getting it, some of you are not getting it, but that's okay. We are all here to learn.

[05:18:46] **Shantanu Tungare:** Alright, this is the first image. I'm also showing you another image. Tell me in the chat what particular, what is the prompt that must have gone to build this particular visual of ancient Indian billionaires?

[05:19:00] **Shantanu Tungare:** Okay, okay. Most of you are...

[05:19:03] **Shantanu Tungare:** giving a good... most of you are getting there, but almost all of you are not getting it right, because I'm looking at the chat right now. I'll tell you, how do you basically prompt to the diffusion models.

[05:19:15] **Shantanu Tungare:** if I say.

[05:19:17] **Shantanu Tungare:** Funny had a difficult life, my difficult life, funny's difficult life, and the difficult life which you have imagined is very different. You can't visualize it. So if you type in one prompt.

[05:19:27] **Shantanu Tungare:** which is very, like, basic and generic, you won't get a detailed image, which, basically, you have orchestrated. But if I say.

[05:19:38] **Shantanu Tungare:** Funny had to fight uphill battles to reach wherever he is. When he went up that orange mountain, he went on top and saw in front of him a big

[05:19:48] **Shantanu Tungare:** a nice sunset, and in that horizon, he just sat down and thought about what he wants to do and how he wants to reach the stars. Alright, so this image, or this visual which I've told you, has that particular emotion, alright?

[05:20:03] **Shantanu Tungare:** It is very detailed. When I say uphill battle, he had to fight uphill battles, which means I can imagine that it was a very difficult life, as compared to me just saying funny had a difficult life.

[05:20:14] **Shantanu Tungare:** Alright? So AI, or the diffusion models, have not reached the spatial intelligence zone. They have reached a stage where they understand language. They are large language models, alright? They haven't reached there. They're getting there into spatial intelligence, of course.

[05:20:32] **Shantanu Tungare:** You should research about Dr. Fifi Li. She's making a world language model, but it's getting there. Right now, as humans, when I'm speaking to you, you are also understanding my facial features, you're also understanding my gestures, and there's a general vibe.

[05:20:48] **Shantanu Tungare:** That's the reason why we're connecting or not connecting.

[05:20:51] **Shantanu Tungare:** Alright? So, this is something which diffusion models do not understand. That is the main difference. So, hence, to prompt the diffusion models, there is a particular master prompt method that I have in my note. This also you can't get till the time you prompt it very perfectly. So, there is a particular master prompt method, which has the emotional tone, the visual reference, the subject composition, lighting, and camera settings.

[05:21:15] **Shantanu Tungare:** Alright? So that is very, very important for you to add in. So, tell me, for the STAR Children Fellows.

[05:21:22] **Shantanu Tungare:** What is the emotional tone? Tell me in the chat.

[05:21:35] **Shantanu Tungare:** Okay?

[05:21:38] **Shantanu Tungare:** Okay, no, hope... Okay, yeah, heroic. Okay, good. Heroic.

[05:21:45] **Shantanu Tungare:** Hope?

[05:21:48] **Shantanu Tungare:** Exploratory.

[05:21:51] **Shantanu Tungare:** Alright.

[05:21:53] **Shantanu Tungare:** Sci-fi, okay, no problem. And, visual... what is the visual reference? Exploratory, somebody said futuristic, very good.

[05:22:03] **Shantanu Tungare:** Alright, what is the visual reference? Visual, similar to... what is the visual reference? I can think of an interstellar.

[05:22:12] **Shantanu Tungare:** Alright, Dan, we have, Gravity?

[05:22:17] **Shantanu Tungare:** Probably... Dune?

[05:22:20] **Shantanu Tungare:** Alright? Now, what is the subject? Now, for example, when I say subject and composition, I'll quickly tell you all, what is the subject and composition here? You have

[05:22:29] **Shantanu Tungare:** a female here, and there are multiple compo... multiple kids from different ethnicities and backgrounds standing together. There is a different... there is a particular Earth which we see, there is a rocket which is going, and there is a certain Mars-looking space with these kids standing with the silhouette. So that is a composition of a poster.

[05:22:49] **Shantanu Tungare:** But for our star children, if you have to think of a particular visual, what is that visual that we can think? What I can think right now, and I can help you with that, you can have,

[05:23:01] **Shantanu Tungare:** Probably, guy in... A guy?

[05:23:10] **Shantanu Tungare:** in his... 30s?

[05:23:13] **Shantanu Tungare:** Alright, 30s... Looking at the phone, with all... with his... Face getting... Sucked into the phone.

[05:23:29] **Shantanu Tungare:** And similar to him, you see... Other people inside a... Mall.

[05:23:40] **Shantanu Tungare:** A girl?

[05:23:42] **Shantanu Tungare:** From India?

[05:23:44] **Shantanu Tungare:** Is looking at this... Alright, surreal Scene.

[05:23:51] **Shantanu Tungare:** and looks... worried, alright?

[05:23:54] **Shantanu Tungare:** Okay, this is the composition. So, I'm looking at a particular guy, looking at a mobile screen, the entire face is getting sucked into the mobile screen, we see people around also in the same scene, and the girl, somewhere standing.

[05:24:08] **Shantanu Tungare:** Alright, somewhere she's standing, and she's looking at this surreal scene inside a mall, alright? What is the lighting, like, inside of an opulent

[05:24:18] **Shantanu Tungare:** Futuristic.

[05:24:22] **Shantanu Tungare:** Okay, mall?

[05:24:23] **Shantanu Tungare:** Okay?

[05:24:28] **Shantanu Tungare:** Shot on a film camera.

[05:24:30] **Shantanu Tungare:** Okay? So what do we have? We have the emotional tone.

[05:24:35] **Shantanu Tungare:** We have the visual references, okay? We have...

[05:24:40] **Shantanu Tungare:** the subject, the subject being the guy in his 30s, looking at the phone, and there are multiple people there, and there is a girl looking from India, also looking at this. A pretty complex prompt, alright? Then lighting, I've put in inside of the mall, and camera settings shot on a film camera. I am a director, so I know that if it's shot on an IMAX camera, which is one of my favorite cameras, very expensive also.

[05:25:03] **Shantanu Tungare:** it will be a good image. So what do we do? We just copy-paste this prompt and go back to the LLM, okay? Now, what does the LLM do for us?

[05:25:10] **Shantanu Tungare:** First of all, I will have ChatGPT build this image for us.

[05:25:16] **Shantanu Tungare:** Hey, chat.

[05:25:18] **Shantanu Tungare:** Can you take a look at the below prompt, and can you do one thing? Can you optimize this prompt in terms of text only to make it a bit more visually striking? I feel I've made some grammatical mistakes. I feel that it can be made, or that entire emotion can come out if the prompt is a bit more detailed. Not too detailed.

[05:25:37] **Shantanu Tungare:** somewhere close to an entire paragraph, but can you optimize this entire prompt for me? Just the text, don't create an image. So what I do is, I put in the bad English that I might have.

[05:25:47] **Shantanu Tungare:** Okay? And I am asking it to optimize this particular prompt for me. Okay, why I'm doing that is because I want the AI to speak the AI's language. Okay, so now what it has done, it has optimized the entire prompt.

[05:26:00] **Shantanu Tungare:** There's a mega mall, interstellar dune, look at all the references out there. A man in his 30s occupies the foreground. So these details we hadn't put, so ChatGPT put that for us. His face and body being unnaturally stretched.

[05:26:12] **Shantanu Tungare:** Pulled into glowing screen, as if caught in the gravitational pull of a digital black hole. Very good. So it's put in all those details.

[05:26:19] **Shantanu Tungare:** Okay? What it has done is replace worried with the first person to notice what's happening. That creates a protagonist. Perfect. So what I will now do... can you create a super cinematic image for this? Not a vertical one, but, like, a horizontal one?

[05:26:35] **Shantanu Tungare:** What now I'll do is take this particular image, alright? Take this particular prompt and have ChatGPT build this for us. Now is the time when I'm going to teach y'all different diffusion models, okay? Now, stay tuned, because this is something which you need to learn, this is where you'll understand. We have officially moved into the Act 2,

[05:26:54] **Shantanu Tungare:** Where I'm going to take you through different diffusion models, where each and every diffusion model with the same prompt reacts very differently. That is where your aesthetic matters. Remember the point number 4 I told you during the diffusion models explanation?

[05:27:07] **Shantanu Tungare:** That is what matters. This is what, as humans, matters. You selecting the right diffusion model, alright? So I have come into an app called as craya.ai.

[05:27:18] **Shantanu Tungare:** Okay? Creo.ai is a wrapper, which means there are multiple diffusion models, they have their APIs, and video generators, image generators, and editors also, all combined into one to make it into a creative suite.

[05:27:31] **Shantanu Tungare:** Alright, so I urge you all to just take one subscription of this kind of a wrapper, if you want to create good images, because you get access to all the diffusion models.

[05:27:39] **Shantanu Tungare:** I'll tell you exactly what we are going to do here. Let's say, for example, we are creating images. See images here? Okay. Now, on the top left.

[05:27:48] **Shantanu Tungare:** You see, these are different diffusion models here.

[05:27:51] **Shantanu Tungare:** Korea's diffusion model, one second. Now, let me just quickly sign in. I don't know how I got signed out.

[05:28:07] **Shantanu Tungare:** Okay, perfect. One second, just presenting my screen again.

[05:28:16] **Shantanu Tungare:** Hmm, the star children. Filmmaking feels like a very, complex procedure, doesn't it? It's not AI filmmaking. Filmmaking in general, or storytelling in general, requires us to

[05:28:27] **Shantanu Tungare:** constantly think and be on our toes. Alright, so we have image... images and video options here. So, let's select image. Now, on the top left, if you see here... one second... on the top left, if you see, you have Crea, which is their own diffusion model. Let's select Crea.

[05:28:44] **Shantanu Tungare:** Alright, we see ChatGPT2 image, the same ChatGPT 2 which we are using in the ChatGPT model, alright? Then we have Nano Banana Pro, the same Nano Banana which is there in Gemina also, the small banana symbol which is there, alright? Then we have Nano Banana 2, which is the newest model.

[05:29:00] **Shantanu Tungare:** Alright, then there are multiple of these models. I'm just going to select one of my favorite models also, which is Sea Dream and Flux 2.

[05:29:07] **Shantanu Tungare:** Okay, so what happens is, these particular diffusion models have these tokens. Can you see here? 2, 15, 5, 75, 100,

[05:29:17] **Shantanu Tungare:** as much as the tokens these particular diffusion models are using, or the compute units, not even tokens, compute units these diffusion models are using, the complexity of the image or prompt adherence goes high, which means the prompt that we write is what we get. If the tokens or the compute units are less.

[05:29:37] **Shantanu Tungare:** Alright? Then, there is a chance where the model hallucinates.

[05:29:41] **Shantanu Tungare:** But that does not mean that the aesthetic, if the compute units are more, that does not mean the aesthetic is going to be awesome.

[05:29:51] **Shantanu Tungare:** That is something which you have to choose. Okay? So I have... I'll show you exactly... let's type in the same prompt.

[05:29:57] **Shantanu Tungare:** Let's type in the same prompt. Let's go vertical, for example. And we have these 5 models, we have selected multiple models. We have put in the same prompt that we generated together.

[05:30:09] **Shantanu Tungare:** optimized it using ChatGPT, and let's hit generate. Okay? So now the same prompt, what do we have? In Crea 2 Turbo, see, the output is fast because Crea was using just two compute units.

[05:30:23] **Shantanu Tungare:** But Nano Banana Pro is using 100 compute units, which means it will take its time. Flux to client, still less. So, see.

[05:30:32] **Shantanu Tungare:** Okay? Not too great. Hallucination has happened. There is a high chance that Nano Banana Pro goes really well, with the prompt adherence. I'm also going to go for a bit more cinematic visual.

[05:30:45] **Shantanu Tungare:** Or let's go 4x3, it's very interesting to go 4x3.

[05:30:49] **Shantanu Tungare:** And I'll also go 16x9.

[05:30:51] **Shantanu Tungare:** Okay? This is us just experimenting with the diffusion models, alright?

[05:30:57] **Shantanu Tungare:** Cool, so we have Crea 2, we have Nano Banana Pro, where the Nano Banana Pro has not taken the details really well. We have the guy just getting into it, it feels very strange.

[05:31:07] **Shantanu Tungare:** Not really sure of this as well.

[05:31:11] **Shantanu Tungare:** Let's see what Sea Dream has given us. Not really good.

[05:31:17] **Shantanu Tungare:** Okay, Crea 2 Turbo here has gotten it right. Nano 102 has gotten it right here.

[05:31:25] **Shantanu Tungare:** Okay, Create 2 Turbo is going in a good space, but Nano 1002 in this particular image has now moved into a good space.

[05:31:34] **Shantanu Tungare:** So, AI filmmaking requires you to constantly reiterate.

[05:31:39] **Shantanu Tungare:** Okay, check this out. This is what...

[05:31:44] **Shantanu Tungare:** We have Nanoba Nana Pro, okay?

[05:31:49] **Shantanu Tungare:** Can you make this into anime style?

[05:31:54] **Shantanu Tungare:** Okay, let's see the anime style as well. What we are trying to do is experimenting with different styles, so you just have to put in in the prompts, and the anime style will come in.

[05:32:03] **Shantanu Tungare:** So, as simple as that, okay?

[05:32:06] **Shantanu Tungare:** See, this anime style is also really nice.

[05:32:09] **Shantanu Tungare:** I really like this anime style, which Crea 2 Turbo is giving out.

[05:32:14] **Shantanu Tungare:** Let's see what Nano Banana Pro and Nano Banana 2 is giving us.

[05:32:17] **Shantanu Tungare:** Sometimes what happens is, if you have certain surreal visuals, if you move them into real-life visuals, they can go and sometimes make them really well, but...

[05:32:27] **Shantanu Tungare:** Anime, or making into animation, generally goes better in terms of surreal visualization.

[05:32:34] **Shantanu Tungare:** It's quite nice. Okay. So now, fellows, tell me in the chat, which one do you guys like? I'll tell you my personal favorite, and you can type in what you guys like also. I like this because it's adhering to our prompt. What do you guys think?

[05:32:48] **Shantanu Tungare:** Crea is good. But Kreyia will put us into a point where we might not get everything that we asked. But Kreyia is definitely in a good space. But if you see here, it types in random text. So.

[05:33:03] **Shantanu Tungare:** here is one thing for your product mockups and everything that you want to do. If you want to do something like a creative teaser that we're trying to do here, no problem. Use these diffusion models, which work out really well for you in this space. I'll also show you a particular diffusion model called as Midjourney. It's a closed model, but I type in the same prompt here.

[05:33:22] **Shantanu Tungare:** Midjourney is, you won't find the API anywhere, but I have the subscription. I'm just gonna quickly show you how it feels like.

[05:33:30] **Shantanu Tungare:** how it looks like. It is a bit more aesthetic...

[05:33:33] **Shantanu Tungare:** diffusion model. It's trained on aesthetics, but it does not get the text correct. So let's see if Midjourney gets it even more correct.

[05:33:51] **Shantanu Tungare:** Midjourney does not... did not adhere to the prompt, but I really like the futuristic mall vibe which Midjourney has given us. So, diff... same prompt in different diffusion model functions really well. For somebody who's asking what happened to ChatGPT image, let's see what ChatGPT Image is.

[05:34:05] **Shantanu Tungare:** See, ChatGPT image is doing a really good job, because it is adhering to our prompt really well. So, what I've realized, you can... let's... let's say, for example, let's use a ChatGPT image, okay? Let's use a ChatGPT image here only. Let's go super wide, and let's hit generate.

[05:34:25] **Shantanu Tungare:** Okay, spending a bit more time on ChatGPT, because ChatGPT2, the, image generator.

[05:34:32] **Shantanu Tungare:** Phenomenal. Very good. Very impressive. In fact, I was not impressed with ChatGPT a few years down the line.

[05:34:38] **Shantanu Tungare:** But I think, it's in a good space, so let's see if ChatGPT gives us good, and then we will move forward. For people who are asking about,

[05:34:48] **Shantanu Tungare:** Exactly how do we... Use the...

[05:34:52] **Shantanu Tungare:** image, or what model do we use when it comes to product mockups, or adding our own image, or everything? There are models like a Nano Banana 2, a ChatGPT 2, and a Nano Banana Pro, where you can make those edits. You can also change the camera angles. We'll also use them so that you get an idea. Let's see what we get.

[05:35:14] **Shantanu Tungare:** While this is generating, I'm just going to quickly show them to you.

[05:35:17] **Shantanu Tungare:** You have to just click on Edit option here. You upload an image. Let's say, for example, I want to upload an image here, okay? This is the same image. What is the image? The Star Children poster that we generated. Now, let's say, for example, I want to change the text, okay, to the Moon Children.

[05:35:36] **Shantanu Tungare:** Okay?

[05:35:38] **Shantanu Tungare:** Change the text, the star children, to the moon children.

[05:35:42] **Shantanu Tungare:** And, also, make the tone really warm.

[05:35:47] **Shantanu Tungare:** Okay? So I... I just changed it like that by using the model Nano Banana 2. You can also use a Nano Banana Pro and generate, and you can also use these multiple options here. See, ChatGPT2 is here. So ChatGPT2 also does that for you. Whatever... whatever you do, you have to keep on regenerating, because

[05:36:06] **Shantanu Tungare:** the models don't necessarily always adhere to whatever you tell them, alright? You can also add your face to it. Like, for example, we have this. This was our base image.

[05:36:17] **Shantanu Tungare:** We changed it to, using a Nano Banana 2, the Moon Children, okay?

[05:36:23] **Shantanu Tungare:** And we made it into warm, alright? Then, we used a Nano Banana Pro, changed it into Move Children, made it warm, okay? You can also add your face here, you can add your product here. So, using these models, you are in a very good space. So, drop in a heart thumbs up if you found this really cool.

[05:36:40] **Shantanu Tungare:** Did you find this cool?

[05:36:44] **Shantanu Tungare:** Yeah?

[05:36:45] **Shantanu Tungare:** Crazy, right? So, yeah, this is where the diffusion model's at. So, it really helps to understand what diffusion models to use. So, like I said before, reiterating for y'all.

[05:36:54] **Shantanu Tungare:** If you want to make edits in any of the images that you have generated, or any of the images you have, old posters, old images of your grandparents, or products, if you have just a product and one image, having a model merge with it.

[05:37:08] **Shantanu Tungare:** use a ChatGPT2, Nano 1002, or a Nano 100 Pro. Any of these would work out well for you, okay? So I think we are in a very good space to now understand what is the exact use case, okay? So let's move ahead and now build our teaser, because otherwise, when will we do it?

[05:37:25] **Shantanu Tungare:** Good. So, we had forgotten to put in, put out the anime... I really like the anime. Should we go for anime fellows? Tell me in the chat.

[05:37:36] **Shantanu Tungare:** Yep.

[05:37:38] **Shantanu Tungare:** Okay, I'll make something, really cool for you. Now, I'll show you something if you guys want to go really, really from, text to video. Let's say, for example, you don't have time, okay? You want to quickly have one image and want to create a video of it. So, what do you do? Just click on this video here.

[05:37:57] **Shantanu Tungare:** Just click on video, and it will open an interface, similar to the image interface. Now, you're focused on the diffusion model, not...

[05:38:04] **Shantanu Tungare:** what the interface is. Diffusion models is one model is CDANCE. Now, CDANCE2 is a model which is causing a huge ruckus into the entire market, because from one image, it will create a complete ad, okay? So, let's say, for example, this is the one image that we added. Let's add one more image.

[05:38:23] **Shantanu Tungare:** What is the image? We already had the poster, remember? So we had created this particular poster. Let's say, for example, we selected this one, the Moon Children.

[05:38:33] **Shantanu Tungare:** I don't know, let's go for...

[05:38:34] **Shantanu Tungare:** Let's go for Star Children only. Moon Children is just making it lesser.

[05:38:39] **Shantanu Tungare:** Okay, let's select the star children.

[05:38:45] **Shantanu Tungare:** Let it upload. What it will now do, generally, what happens with CDAMS, it flags off certain things, but you have to keep on regenerating. If you want to go directly into a complete ad and don't want to go through entire process, this is the way to do it. Okay? Let's say, for example, add image 1,

[05:39:02] **Shantanu Tungare:** Is...

[05:39:04] **Shantanu Tungare:** This is the poster for the new, series that I'm working with, taking the characters from these. Can you build a nice 15-second teaser? The entire concept is that people have been, entire concept is, as per below, check out the voiceover. So what I do is.

[05:39:20] **Shantanu Tungare:** I will use this as an image, okay? And, I will... Take in the...

[05:39:26] **Shantanu Tungare:** I will take in the script that we had generated, remember the cinematic script?

[05:39:32] **Shantanu Tungare:** Okay, this is the script. I take this, I go into Crea.

[05:39:40] **Shantanu Tungare:** Type in the voiceover script.

[05:39:43] **Shantanu Tungare:** Copy-paste the entire script, and... Also, can you add... certain... Shorts, like...

[05:39:58] **Shantanu Tungare:** This anime version, one second, which is the anime asset.

[05:40:03] **Shantanu Tungare:** You remember the anime... one second, let me just remove this.

[05:40:08] **Shantanu Tungare:** Yeah, like the start frame. We already have the start frame. Hey, where is the start frame?

[05:40:18] **Shantanu Tungare:** Yep.

[05:40:20] **Shantanu Tungare:** Okay, let's take this image too, which is, again, an anime version only.

[05:40:24] **Shantanu Tungare:** Make sure that the ad is quick, voiceover is complete, and ends with the logo. Should feel like a really fast-paced ad.

[05:40:32] **Shantanu Tungare:** And, yeah, please generate this. Okay, so this is the CDUNS2 model. If you're in a hurry, have one image, want to create a quick ad, add one image, put in a very base prompt. You can also make this prompt by telling ChatGPT that, give me a CDUNC2 prompt, and I want to generate this particular image. It will generate it for you.

[05:40:52] **Shantanu Tungare:** I select a 15 seconder.

[05:40:54] **Shantanu Tungare:** Okay? And I select, let's say, for example, let's say a 21x9, because I want a super wide frame. And, yeah, I just click on generate. Now it will create an entire video for me.

[05:41:05] **Shantanu Tungare:** Second, if you want to another go from text to video again, with just one image, there is another diffusion model. Now, note this down. The diffusion model is Grok Imagine.

[05:41:16] **Shantanu Tungare:** Now, Grok Imagine is XAI, which is Elon Musk's company. Same prompt I put in, but the quality is not as great as CDAM's. But, no problem, it will also work out really well for you. So, okay, so let's go for lesser duration, which is 10 seconds.

[05:41:33] **Shantanu Tungare:** Okay.

[05:41:35] **Shantanu Tungare:** And then it will do the job for you. So while these videos are cooking, let's start building our script from scratch, alright? Let's start building our script.

[05:41:44] **Shantanu Tungare:** Alright, now I want to move ahead and start building the entire ad. The voiceover which I want you to build it is the below. So the voiceover is this, the same voiceover that it has only given us.

[05:41:59] **Shantanu Tungare:** What I want you to do is, with each voiceover, add one prompt.

[05:42:03] **Shantanu Tungare:** of the image that we can generate. We can add two more... two prompts per voiceover, so that it becomes a coherent video. Make sure to add all the technical details into the master prompt that you optimized.

[05:42:17] **Shantanu Tungare:** So that I can just copy-paste it. Make sure, again, I'm reiterating, make sure all the technical details of the prompt are put in, so that I don't have to separately do it in each and every prompt that you'll give me for this particular voiceover.

[05:42:32] **Shantanu Tungare:** Alright? So I have now given it the exact instructions, what I want it to do. What I'm doing is having it give me a complete master prompt here.

[05:42:44] **Shantanu Tungare:** Okay, so this is the entire master prom that we have.

[05:42:47] **Shantanu Tungare:** Which includes all the details that I wanted, and now it is... Giving me...

[05:42:54] **Shantanu Tungare:** for every voice over one particular prompt. Drop in a heart, thumbs up if you're understanding that we are now moving into the second phase of building everything from scratch. Okay, so now let's copy-paste this prompt, not going through everything because of... in the interest of time.

[05:43:10] **Shantanu Tungare:** Alright, so let's build everything. Let's go to Kreya.

[05:43:14] **Shantanu Tungare:** Oh, you guys want to check out if the video's ready? This is Grok Imagine. Grok Imagine generally does things really fast. Let's... let's see.

[05:43:23] **Audio shared by Shantanu Tungare:** Every generation inherits a world.

[05:43:26] **Audio shared by Shantanu Tungare:** Ours inherited a question.

[05:43:29] **Audio shared by Shantanu Tungare:** What comes next?

[05:43:31] **Audio shared by Shantanu Tungare:** While everyone else was looking down, Every...

[05:43:34] **Shantanu Tungare:** Okay, so you can't use everything because there are some hallucinations that happen there, but that's how Grok Imagine is. I'm waiting for Celans to give me all those details. Anyways, so let's start building stuff from scratch. Now, you in the chat fellows, tell me, do you guys want to go with ChatGPT, or do you guys want to go with Nano Banana, or which diffusion model do you guys like?

[05:43:54] **Shantanu Tungare:** I like Nano Banana Pro, but I really like the anime style here.

[05:43:59] **Shantanu Tungare:** Yeah, ChatGPT is doing a good job, honestly.

[05:44:04] **Shantanu Tungare:** Yeah, Nano Banana is also good. So now, let's select multiple models and start building from scratch, and we can select whatever works out well for us. So we have... we keep the multiple models on. Let's go for a chat GPT. Also, you guys are selecting expensive models, and let's go with Nano Banana and Nano Banana Pro both.

[05:44:21] **Shantanu Tungare:** Alright, so let's copy-paste the prompt.

[05:44:24] **Shantanu Tungare:** select the... Wide aspect ratio, and hit Generate.

[05:44:31] **Shantanu Tungare:** Okay, that's how we hit generate, then we move ahead and copy-paste the next prompt.

[05:44:41] **Shantanu Tungare:** Okay, which is, this... Let's copy-paste this prompt and go to Claw or Kreya.

[05:44:53] **Shantanu Tungare:** Remove this...

[05:44:57] **Shantanu Tungare:** So, generate...

[05:45:00] **Shantanu Tungare:** So, pretty much, we are in a space where all we have to do is copy-paste the entire prompt. Now, what the problem with this is that it has given me one master prompt, but now it's expecting me to copy-paste everything. I'm not gonna do that. It's ChatGPT's job to make things easy for me, because this is the noise I want to automate.

[05:45:17] **Shantanu Tungare:** I asked you to add in all the technical details to each and every prompt. Don't be lazy. Each and every prompt needs to showcase the same technical details, because those are... treat them as separate prompts altogether. I'm not going to manually do anything. It's your job to do it.

[05:45:33] **Shantanu Tungare:** Alright, so I have just yelled at Mr. ChatGPT so that it does its job again.

[05:45:40] **Shantanu Tungare:** Okay, so voiceover, okay, now it started giving me everything, check this out.

[05:45:45] **Shantanu Tungare:** So you have to be really strict with these LLMs, because that will really help you. Don't have to do anything manually. Alright, so let it now generate the prompts. Till then, let's see if something is created. Are you guys going to enjoy the entire process? Let's see...

[05:45:59] **Shantanu Tungare:** This is a good video.

[05:46:04] **Shantanu Tungare:** This is a good image.

[05:46:06] **Shantanu Tungare:** This is also a good image. That's a nice image. I like the flag of India also here.

[05:46:18] **Shantanu Tungare:** Okay, but I don't like the checks which I hear, so yeah, I think we are in a good space. So let's copy-paste the prompt and quickly move ahead. Okay, we have the prompt 2, which was pending. Let's copy-paste this, move to Korea.

[05:46:32] **Shantanu Tungare:** And hit Generate.

[05:46:35] **Shantanu Tungare:** Then again... Our... ours inherited a question. Copy-paste this.

[05:46:41] **Shantanu Tungare:** Hit generate.

[05:46:45] **Shantanu Tungare:** And... prompt number 4...

[05:46:50] **Shantanu Tungare:** We generate...

[05:46:52] **Shantanu Tungare:** Tell me, guys, in the chat, I feel like I'm speaking to myself, are you enjoying the process? Are you understanding the entire process of filmmaking, content creation?

[05:47:02] **Shantanu Tungare:** How tiresome do you think it is?

[05:47:09] **Shantanu Tungare:** Plus, isn't it fun to just come to your visualization ASAP?

[05:47:14] **Shantanu Tungare:** Just makes it feel like... We are in a time of magic here.

[05:47:21] **Shantanu Tungare:** Alright.

[05:47:22] **Shantanu Tungare:** Good. So let's go through a voiceover, because that is what drives the entire,

[05:47:27] **Shantanu Tungare:** script. Ours inherited a question. One second, what is the voiceover? Every generation inherits a world.

[05:47:34] **Shantanu Tungare:** Alright? Ours inherited a question.

[05:47:38] **Shantanu Tungare:** What comes next?

[05:47:42] **Shantanu Tungare:** Okay, I think what's pending...

[05:47:45] **Shantanu Tungare:** Move ahead and build the entire script. You have just stopped at what comes next. I want you to take it to the point where we also build the entire title logo, which is the Star Children.

[05:48:01] **Shantanu Tungare:** So you have to keep on pushing these Chad GPTs of the world. It's not that easy, alright? What do you have every generation inherits the world, I've already used this.

[05:48:11] **Shantanu Tungare:** Okay, what comes next has come in.

[05:48:14] **Shantanu Tungare:** Okay, good. Now it's starting to give me all the details.

[05:48:19] **Shantanu Tungare:** Quite bothersome sometimes when these... but...

[05:48:22] **Shantanu Tungare:** Building an ad in, like, few minutes is always the fun part of it, right?

[05:48:28] **Shantanu Tungare:** Okay, let's, take it. What comes next? We have, this shot as well.

[05:48:35] **Shantanu Tungare:** It always helps to take in as many images as possible, and the only reason why, of course, I'm going from one, from breaking down the entire process to go from text to image first, and then image to video is only and only because A

[05:48:50] **Shantanu Tungare:** I want to be clear if this idea is in a good space, and B, we get to choose the diffusion models and the color scheme and everything, alright? So, breaking the professional way to do it, first of all, build your images, lock the diffusion model, and then move ahead and build it into a video. You don't have to necessarily

[05:49:08] **Shantanu Tungare:** build everything from scratch, because most of the diffusion models right now, the video generators specifically, have reached a stage where you type in... you type in a prompt, and you can get intercuts, which means multiple cuts from them only. You saw how we created,

[05:49:24] **Shantanu Tungare:** the entire video from one image. Yeah, that's how it works these days. So you have to be really skilled enough to understand what diffusion model to choose. I'm already showing you all of them, but you'll have to keep on practicing if you really want to

[05:49:38] **Shantanu Tungare:** Stay ahead in terms of your content creation game.

[05:49:41] **Shantanu Tungare:** Alright, so we have moved to the final prompt. Let's build this.

[05:49:56] **Shantanu Tungare:** Repasting it here... And we have this prompt.

[05:50:05] **Shantanu Tungare:** Alright, what is the suggestion Mr. ChatGBT very smartly is trying to give me?

[05:50:09] **Shantanu Tungare:** One improvement I'd like to make before production, replace the mall scene with a classroom, subway, airport, and living room montage. It broadens the metaphor.

[05:50:18] **Shantanu Tungare:** Sure, I'll replace it, but why don't you give me the prompt then?

[05:50:21] **Shantanu Tungare:** Alright, so I'm asking it to give me the prompt of its own suggestion only, otherwise what's the point?

[05:50:27] **Shantanu Tungare:** Being very smart, are we?

[05:50:31] **Shantanu Tungare:** Okay, we have a replacement prompt, let's take them. Let's see, it really helps to have multiple options in our hands.

[05:50:39] **Shantanu Tungare:** Visuals are coming out to be good, fellows. I'm excited to build this with y'all.

[05:50:44] **Shantanu Tungare:** Okay?

[05:50:46] **Shantanu Tungare:** Final prompt...

[05:50:48] **Shantanu Tungare:** Alright, I'm not going through all the details, because we have given this chat a lot of context. We have given this particular chat a lot of context.

[05:51:03] **Shantanu Tungare:** Okay, we are done. So, till these diffusion models, look at the entire storyboard, guys. I'm excited. Let's see the video if SeaDance has created the video, I'm kind of excited to see. Are you guys excited to see it? Drop in a heart, thumbs up.

[05:51:16] **Shantanu Tungare:** Yeah, if you do it, then I'm going to drop in or show you the video, because Sidan generally does a good job.

[05:51:22] **Shantanu Tungare:** Okay, let's watch it.

[05:51:24] **Audio shared by Shantanu Tungare:** Every generation inherits...

[05:51:26] **Shantanu Tungare:** One second, yeah.

[05:51:27] **Audio shared by Shantanu Tungare:** Every generation inherits a world.

[05:51:30] **Audio shared by Shantanu Tungare:** Ours inherited a question.

[05:51:33] **Audio shared by Shantanu Tungare:** What comes next?

[05:51:35] **Audio shared by Shantanu Tungare:** While everyone else was looking down, We looked up.

[05:51:42] **Audio shared by Shantanu Tungare:** Every generation inherits...

[05:51:44] **Shantanu Tungare:** Of course, what do you guys think? Tell me in the chat.

[05:51:48] **Shantanu Tungare:** Crazy, right?

[05:51:53] **Shantanu Tungare:** full, complete video. Of course, you have to regenerate to get it into a good space, but you get the point, right? Like, you can create a complete ad, okay?

[05:52:02] **Shantanu Tungare:** Cool, let's now see the images. Now we know that CDance is working out really well for us. Alright, so let's now go through the script again. Always go through the script, because...

[05:52:13] **Shantanu Tungare:** Give me the voiceover script again for me to go through. I don't want to go through the entire chat again just to find it. Just the voiceover script.

[05:52:20] **Shantanu Tungare:** Okay, let's always go through the voiceover script, or the script that you have in hand, because that is something which should be the spine of whatever content you create. So what do we have? Every generation inherits a word.

[05:52:31] **Shantanu Tungare:** Ours inherited a question, what comes next? While everyone else was looking down, we looked up, and in the stars, we found something our world had forgotten. The star children, we were not born to scroll.

[05:52:43] **Shantanu Tungare:** Perfect, we were going to explore. Okay, we understood the script, now let's go through the images. This is the next phase where I'm going to tell you how do you use multiple of these video generators, alright? So let's go through the

[05:52:57] **Shantanu Tungare:** Details.

[05:53:00] **Shantanu Tungare:** Okay, I would like to start off with...

[05:53:02] **Shantanu Tungare:** I'll be... oh, my lord, what is this?

[05:53:06] **Shantanu Tungare:** Okay... Let's see and create something better.

[05:53:12] **Shantanu Tungare:** Okay, I like this particular visual because it creates that particular mystery to it. Okay, so if I want to create a video.

[05:53:19] **Shantanu Tungare:** What do I do? I just click on a video here, okay? If it involves a lot of characters, like this particular image, I'll just not confuse you all

[05:53:28] **Shantanu Tungare:** First of all, just make one... one entire video.

[05:53:33] **Shantanu Tungare:** from C-duns, so you get multiple intercuts.

[05:53:36] **Shantanu Tungare:** But CDance is expensive. If you don't want to do that, go for... there are two diffusion models which I'll suggest to all. Kling 3.0, okay, does amazing character visualizations, and I'll show you how.

[05:53:49] **Shantanu Tungare:** Okay, so this is the visual, a girl is looking at everyone.

[05:53:52] **Shantanu Tungare:** Okay. Let's say, for example, I'll keep the audio on.

[05:53:56] **Shantanu Tungare:** And let's start prompting, very simple prompting.

[05:53:59] **Shantanu Tungare:** Super cinematic shot of camera moving to the left, and we see the people's faces getting sucked into the phone, and the camera is moving to the girl who is looking at all of this surreal scene with surprise, okay? I'm talking about the girl who is on the right, not looking at the phone.

[05:54:18] **Shantanu Tungare:** Simple prompt, just keep it probably, like, 8 seconds or something like that, and hit generate. Okay? If... if, for example, you want to generate a particular visual of only the shot of that girl, you can use the same image, and I'm going to show you how.

[05:54:36] **Shantanu Tungare:** Let's say, for example... okay, one second, yeah.

[05:54:43] **Shantanu Tungare:** Cinematic shot of the girl looking around, intercut. Cut 2 of the girl looking at all of them with surprise. Cut to the guy.

[05:54:53] **Shantanu Tungare:** looking at the phone and getting sucked into the phone. So, I just have to mention what I see into that visual.

[05:55:00] **Shantanu Tungare:** And I will just put it as a prompt, and this particular intelligent model will do the job for it. I'll put it 10 seconds, and I will hit on generate, okay? There is one more model which does this in a very good space, which is called as Happy Horse, okay?

[05:55:16] **Shantanu Tungare:** All you have to do is add a start frame, which we have already put in, and you just have to hit generate. It's that simple. So between these models, all of your work in terms of creating intercuts and having same character consistency is solved, okay? So I hope you have noted that down. Let's now quickly move ahead, and I'll take you through the next phase. What is the next phase? I'll show you. We are into the video part of it.

[05:55:40] **Shantanu Tungare:** Let's go to select assets. Now, if you use a model, if you use a...

[05:55:45] **Shantanu Tungare:** wrapper like a Kreya, it will give you options like selecting assets directly into the video interface. See, all... these are all the assets that we have

[05:55:54] **Shantanu Tungare:** These are all the assets that we have.

[05:55:56] **Shantanu Tungare:** what we have generated. Let's say, for example, we have this. Let's watch it properly, and let's select the assets here. One second.

[05:56:08] **Shantanu Tungare:** Okay.

[05:56:10] **Shantanu Tungare:** See, these are all the assets that we generated.

[05:56:14] **Shantanu Tungare:** Okay.

[05:56:17] **Shantanu Tungare:** Very good shot. Let's say, for example, we want to create this into a visual. I will put... I will make... turn this into a video.

[05:56:27] **Shantanu Tungare:** But I also want to transition from this shot to a next shot. So what do I do?

[05:56:32] **Shantanu Tungare:** I select another model, same model, of course, which is... Clink 3.0.

[05:56:38] **Shantanu Tungare:** This is the first frame. I will add another frame. I want to transition from that mall shot.

[05:56:44] **Shantanu Tungare:** Okay? I want to transition from that mall shot

[05:56:47] **Shantanu Tungare:** to a particular shot like this, which is where everybody's getting engulfed into a phone. So I want to transition like that.

[05:56:55] **Shantanu Tungare:** What I will do is... Camera quickly flies by between the people looking at their phone.

[05:57:03] **Shantanu Tungare:** and transitions, and camera moves around rapidly and transitions into the second frame. So what I wanted to do is move in between the crowd, and then quickly move and transition into the second frame. I use a Clink 3.0, we added the first shot, we added the second shot, and you hit generate. That is how you merge two images together.

[05:57:24] **Shantanu Tungare:** As simple as this. So these are the capabilities of these diffusion models, especially Kling 3.0 and what I showed you, Happy Horse. If there is a wide visual, alright, if there is a wide visual, I'm going to quickly show that to you as well. Let's go to the assets.

[05:57:46] **Shantanu Tungare:** If there is a particularly wide visual, like, one second...

[05:57:53] **Shantanu Tungare:** Okay, if there is a particular wide visual like this, which does not require you to show multiple of character movements.

[05:58:00] **Shantanu Tungare:** Just click on turn internet into a video, and select this Halo 2.3 Fast.

[05:58:07] **Shantanu Tungare:** What you can do?

[05:58:08] **Shantanu Tungare:** Super cinematic establishment shot.

[05:58:11] **Shantanu Tungare:** of camera, moving slowly ahead towards the machine on the right. Simple, and hit.

[05:58:19] **Shantanu Tungare:** You can select 6 seconds or 10 seconds, and hit generate. So, for a wide visual which does not have many characters, use a halo.

[05:58:26] **Shantanu Tungare:** For characters, use a happy horse and a cling. If you are tired and bored, alright, to create or juggle between different diffusion models, and if you have the money to, use multiple credits, just go for a C-Dance, because C-Dance will solve all your problems, alright? But you need to prompt it properly.

[05:58:46] **Shantanu Tungare:** Okay, so let's see, let's say, for example, the visual...

[05:58:54] **Shantanu Tungare:** Let's watch the... okay. Now, for example, you suddenly generate a visual, like, which has multiple of these checks, which means multiple visuals.

[05:59:03] **Shantanu Tungare:** You can create a complete video from these vertical sto- these are like storyboards, right? And for that, I will show you how do you do that. You turn this into a video, and...

[05:59:14] **Shantanu Tungare:** You guessed it right, use a C-Dance model.

[05:59:19] **Shantanu Tungare:** Using this image, which is...

[05:59:25] **Shantanu Tungare:** It is the asset attached, okay. Using this image...

[05:59:29] **Shantanu Tungare:** make this... use all the 6 images from this, and make this... make them into separate scenes. They should tie itself together properly, should hold on to...

[05:59:40] **Shantanu Tungare:** The action properly should feel very realistic. Do not warp the images, do not make it very low resolution, no weird dynamics. Make sure the physics of the scenes are also maintained. So this is how you prompt to a particular CDAS, and you go make it into a 10 seconder, and you hit generate.

[05:59:59] **Shantanu Tungare:** Okay? So, you can create a storyboard like this in any of your chat GPTs or any of your LLMs, and go come to Cdance, and it will make the entire video for you.

[06:00:08] **Shantanu Tungare:** As simple as that, okay? We are in a very strange time, fellows.

[06:00:13] **Shantanu Tungare:** Okay, let's move ahead and see what we have created. I really like this image.

[06:00:19] **Shantanu Tungare:** Okay, let's say I see... I like this image, but they're looking at something, right? They're looking at something. So they should probably look at something, so let's use a start and an end frame.

[06:00:31] **Shantanu Tungare:** to make them look at something. I'll show you the videos later. So let's make them look at something. So let's see if we have generated something which they are looking at.

[06:00:47] **Shantanu Tungare:** Everybody's looking at something, fellows.

[06:00:51] **Shantanu Tungare:** What are they looking at is the question.

[06:00:53] **Shantanu Tungare:** They should ideally be looking here.

[06:00:55] **Shantanu Tungare:** But there needs to be some...

[06:00:58] **Shantanu Tungare:** thing which they are looking at, like a proper star or something. Humanity's next chapter begins. Probably, they are looking at this particular visual. So, let's say, for example, I put this into... turn this into a video, okay? I want to add a start frame to this.

[06:01:16] **Shantanu Tungare:** Which is where, where are the folks, all of them standing together.

[06:01:25] **Shantanu Tungare:** Okay, these are the folks.

[06:01:27] **Shantanu Tungare:** Let's add, another asset, let's select a model first. Let's select,

[06:01:34] **Shantanu Tungare:** Clink 3.0. We have added the start frame, let's add an end frame. What is the end frame?

[06:01:40] **Shantanu Tungare:** We can also have them just looking at the logo unit, I think that will be crazy. Okay, so let's have them looking at the logo.

[06:01:49] **Shantanu Tungare:** Super cinematic shot of...

[06:01:52] **Shantanu Tungare:** Camera pans to the left and moves and flies into the sky to reveal the logo.

[06:02:00] **Shantanu Tungare:** Which is in the second frame. So, simple like that, let's keep the audio on, and hit generate, and let's also regenerate that using Happy Horse, so that we get more options to edit. So, we already have a start frame, Happy Horse will generally reuse only a start frame, so let's ignore that.

[06:02:19] **Shantanu Tungare:** Okay, let's move ahead and go through the script again. What is the script?

[06:02:25] **Shantanu Tungare:** Every generation inherits a world, or inherited a question, what comes next? While everyone else was looking down, we looked up, and in the stars, we found something interesting our world had forgotten. Wonder, the star children, we were not born to scroll, we were born to explore.

[06:02:40] **Shantanu Tungare:** Now, I'm going to, leave the floor open to y'all, okay? What I want you guys to do...

[06:02:46] **Shantanu Tungare:** Is, first of all, select a particular...

[06:02:51] **Shantanu Tungare:** Let's select a particular shot, like a storyboard. Now, we have already created this, SeaDance is already making this for us. Now, you guys have to help me create a prompt for this particular visual. Let's say, for example, this is the visual.

[06:03:05] **Shantanu Tungare:** Okay, now we have 4 shots here.

[06:03:08] **Shantanu Tungare:** Okay? We turn this into a video. Tell me in the chat, which is the model that we will use.

[06:03:18] **Shantanu Tungare:** Somebody's saying that there will be multiple inconsistencies. Of course.

[06:03:23] **Shantanu Tungare:** This is not... something, you need perfection, you spend more time on it. But, the first cut.

[06:03:30] **Shantanu Tungare:** Or the first concept is what we are creating. We can't be perfectionists in an hour's time and expect a full film to happen, because that will be undermining all the filmmakers like us. Because it's impossible, no AI has reached there. Alright, so what we do is, if there is a storyboard involved, like I said before, use a CDance and finish your job.

[06:03:49] **Shantanu Tungare:** Using the four images in this, make it into super cinematic 4 shots. Okay, I put it into,

[06:03:57] **Shantanu Tungare:** 15 seconder, or let's just make it into a 10 seconder. We are not going to use so much of footage, and let's hit generate. Alright? Okay, let's move and see what we'll create more, and you are going to help me prompt it properly.

[06:04:11] **Shantanu Tungare:** Let's see... Let's not use this. This is a good image, though.

[06:04:17] **Shantanu Tungare:** But let's use another CDance, because I'm telling you more of using CDance, because it... if you're just starting out and you don't want to get into too much of depth of it, C-dance just helps you create a complete video from scratch.

[06:04:29] **Shantanu Tungare:** Using independent images from this particular visual, make them into separate scenes. It should not look like a grid. Study all the scenes and make them into a complete video. Okay? You are in a hurry, quickly want to make stuff, CDance is your game. Now, let's move towards more professional prompting, because I've shown you all the models that we can use.

[06:04:48] **Shantanu Tungare:** So let's move into professional prompting here. Let's select an image first, and you guys are going to tell me what we can select. I really like her eyes, actually. Do you want to, like, have a shot of going into her eyes and probably open into humanity's future or something like that? I think let's do that.

[06:05:03] **Shantanu Tungare:** So let's turn this into a video.

[06:05:05] **Shantanu Tungare:** And let's, select a cling.

[06:05:09] **Shantanu Tungare:** Okay, let's select a cling. Now, what is pending is something which is,

[06:05:16] **Shantanu Tungare:** Which I haven't told you, which is, how do you generate dialogue?

[06:05:20] **Shantanu Tungare:** Dialogue's important, right? So what dialogue do we have? We were born to scroll, we were born to explore. We were not born to scroll, we were born to explore. Let's say I want this lady to speak this dialogue. So what do I do?

[06:05:33] **Shantanu Tungare:** Camera slowly zooms on towards the lady with the beautiful eyes. She looks dead into the camera and speaks this dialogue with conviction and with inspiration.

[06:05:45] **Shantanu Tungare:** Okay? And this is the dialogue.

[06:05:54] **Shantanu Tungare:** So this is how you generate dialogues as well. I'm super excited if this will come out to be really nice. Just to be safe, I'm going to generate this in Happy Horse as well.

[06:06:10] **Shantanu Tungare:** Because most of the time,

[06:06:13] **Shantanu Tungare:** sometimes, actually, not most of the time, these diffusion models just, like, test your patience. So you always be ready with good amount of compute units. If you want to make a film, of course, this is cheaper than actually shooting it, but

[06:06:26] **Shantanu Tungare:** you require to have a lot of patience. I'm sure many of you must have lost patience because you thought that it is just prompting and creating a visual, but no, it's not that at all.

[06:06:36] **Shantanu Tungare:** Alright, let's turn this into a video. Now, what do we turn this into a video? Alright, so let's say, for example, I want to remove this particular...

[06:06:45] **Shantanu Tungare:** visual, this particular text. So let's edit this out.

[06:06:50] **Shantanu Tungare:** Let's edit this.

[06:06:53] **Shantanu Tungare:** Remove the text, which is at the bottom right of this image, completely.

[06:06:59] **Shantanu Tungare:** Okay, I've removed the text, which is at the bottom right, by just using the edit. I'm also going to use a Nano Banana Pro, and be safe, okay?

[06:07:09] **Shantanu Tungare:** So I removed the text.

[06:07:11] **Shantanu Tungare:** And then I will use it as a...

[06:07:14] **Shantanu Tungare:** Video. I have some plans, actually.

[06:07:28] **Shantanu Tungare:** So we are at the final end, because we have most of the videos, because now we will move ahead. Okay, see, let's remove this. We have removed the text of... properly, we have removed the text. Now we will use that image. I hope you are getting an idea of what we are trying to do. This is filmmaking at work.

[06:07:44] **Shantanu Tungare:** I really like this image.

[06:07:47] **Shantanu Tungare:** I also really had liked one of the images that we had created, which can be a nice start and end frame for this. So let's use Cling again. I'm not showing you other diffusion models, because I want you guys to learn the best diffusion models.

[06:08:01] **Shantanu Tungare:** Otherwise, other modules will just confuse the **** out of you. So Cling, Happy, or Seed Deam, your entire movie will be created. So this is the start frame, probably make it into an end frame.

[06:08:11] **Shantanu Tungare:** probably this flies by, and there was this one image where there were people looking from outside. Check this out. There were people looking from outside, from inside the spaceship, okay? So let's say, for example, camera just zooms out and shows these people, okay? Let's do that.

[06:08:29] **Shantanu Tungare:** Cinematic shot of camera just pulling back as the spaceship flies by, and pulls back to move into inside the window of the next image, where we see the people looking outside the window.

[06:08:41] **Shantanu Tungare:** Okay, I like this particular visual direction. I'll keep the audio on, and I will hit generate.

[06:08:49] **Shantanu Tungare:** Okay, good. We are in a good space now.

[06:08:52] **Shantanu Tungare:** Now, let's...

[06:08:54] **Shantanu Tungare:** move into the final stage of our filmmaking career right now, and generate audio and music quickly. For that, I'm going to show you 11 Labs. Are you guys familiar with Eleven Labs?

[06:09:08] **Shantanu Tungare:** Okay, if you guys are not familiar with 11 Labs, let's... one second, I'll just log in from another account for you.

[06:09:15] **Shantanu Tungare:** Are you guys enjoying the process? We have reached the final stage, fellows.

[06:09:19] **Shantanu Tungare:** From where we have come, started from the bottom, now we are here.

[06:09:22] **Shantanu Tungare:** So we are in a very good space.

[06:09:25] **Shantanu Tungare:** Let's sign in.

[06:09:27] **Shantanu Tungare:** One second, I'll just sign in quickly.

[06:09:38] **Shantanu Tungare:** Okay, we have remaining credits. Okay, just presenting my screen again.

[06:09:43] **Shantanu Tungare:** For people who have lost patience, I completely understand. Filmmaking requires you to have a lot of patience, fellows. For people who haven't lost the patience, I'm glad you guys are here, because we are going to watch something phenomenal by the end of this.

[06:09:55] **Shantanu Tungare:** So, this is 11 Labs AI Audio Generator. Simple, don't get too confused with your, this particular tool, just use text-to-speech.

[06:10:03] **Shantanu Tungare:** We already have the script. There is a model here, just select a V3 model, the newest model, which is crazy. For people from outside of India, if you see, V3 models does African languages really well, Arabic really well, Armenian, and many other languages it does really well, okay? So, specific to your local language and which is not English, which is also not my local language, you can use 11 Labs V3, and it is very intuitive.

[06:10:28] **Shantanu Tungare:** Okay, what do I have to do? Just copy-paste this particular...

[06:10:32] **Shantanu Tungare:** script. Every generation inherits a word, R inherited a question. What comes next while everyone else was looking down? We looked up Star Children. Okay, perfect, we already have this in a very good space. So, what do we do? Just select the voiceover. Now, you guys are going to help me select the voiceover.

[06:10:51] **Shantanu Tungare:** Are we looking at a male or a female voiceover? Tell me that first.

[06:11:06] **Shantanu Tungare:** Can we have Suraj Narayan Singh, or whoever the **** that guy is, just remove him.

[06:11:10] **Shantanu Tungare:** Was he being very abusive.

[06:11:13] Phani Krishna - Outskill: Doing that, Shantanu, yes.

[06:11:15] **Shantanu Tungare:** Yeah.

[06:11:17] **Shantanu Tungare:** Yeah, what the ***** guys? Male voice, okay.

[06:11:21] **Shantanu Tungare:** What do we have?

[06:11:21] **Audio shared by Shantanu Tungare:** Hey, it's Tyler!

[06:11:22] **Audio shared by Shantanu Tungare:** A clean...

[06:11:24] **Shantanu Tungare:** Okay, let's share this one.

[06:11:25] **Audio shared by Shantanu Tungare:** Same sabke passeh.

[06:11:27] **Audio shared by Shantanu Tungare:** Le can use Genecandaz.

[06:11:29] **Audio shared by Shantanu Tungare:** Harkisi kepas.

[06:11:30] **Shantanu Tungare:** Let's say, for example, I have a moniker. Okay, let's select a moniker.

[06:11:39] **Shantanu Tungare:** Okay? Now, this Monica will show here. Now, there is one cool thing. If you just click on Enhance here.

[06:11:47] **Shantanu Tungare:** it will add the emotion. You can also change this emotion, by the way, so it's a very cool thing. So let's generate, and now you'll get two options.

[06:11:56] **Shantanu Tungare:** And you can select between these two options, let's see.

[06:11:58] **Audio shared by Shantanu Tungare:** Every generation inherits a world.

[06:12:02] **Audio shared by Shantanu Tungare:** Ours inherited a question.

[06:12:04] **Shantanu Tungare:** Then a short pause.

[06:12:06] **Audio shared by Shantanu Tungare:** What comes next?

[06:12:07] **Shantanu Tungare:** Whisper.

[06:12:08] **Audio shared by Shantanu Tungare:** While everyone else was looking down.

[06:12:10] **Shantanu Tungare:** Exhale sharply.

[06:12:11] **Audio shared by Shantanu Tungare:** We looked up.

[06:12:13] **Audio shared by Shantanu Tungare:** The Star Children.

[06:12:15] **Shantanu Tungare:** Okay? Just a bit too excited. The word was not needed. Probably an inspiring... inspiring is what we need to do.

[06:12:22] **Audio shared by Shantanu Tungare:** Every generation in heaven.

[06:12:24] **Shantanu Tungare:** Okay, let's regenerate.

[06:12:30] **Audio shared by Shantanu Tungare:** Every generation inherits a world.

[06:12:33] **Audio shared by Shantanu Tungare:** Ours inherited a question.

[06:12:36] **Audio shared by Shantanu Tungare:** What comes next?

[06:12:39] **Audio shared by Shantanu Tungare:** While everyone else was looking down, We looked up.

[06:12:44] **Audio shared by Shantanu Tungare:** The Star Children.

[06:12:46] **Shantanu Tungare:** Quite nice. What do you guys think?

[06:12:47] **Audio shared by Shantanu Tungare:** Every generation inherits a world.

[06:12:51] **Audio shared by Shantanu Tungare:** Ours inherited a question.

[06:12:55] **Audio shared by Shantanu Tungare:** What comes next?

[06:12:58] **Audio shared by Shantanu Tungare:** While everyone else was looking down, We looked up.

[06:13:04] **Audio shared by Shantanu Tungare:** The Star Children.

[06:13:06] **Shantanu Tungare:** Very nice. I like the inspiring tone of it. Of course, you can generate it in your language, whatever it is, but just showing English because it's a mode of communication at this stage, so...

[06:13:16] **Shantanu Tungare:** You get the point, right? It's a very powerful tool, and if you know what direction you want your voice to take, this is perfect for you. Okay, alright, let's move ahead and now generate audio, which is the best and the most fun part of

[06:13:29] **Shantanu Tungare:** always all of my sessions, because this is the audio which will tie all the videos that we have generated together. Now, I haven't shown them, shown the,

[06:13:39] **Shantanu Tungare:** shown the videos to y'all, because even I don't know what it will generate, because you have to constantly reiterate. But just the feel of it is what we are going to create today. We are not going to look at the perfection of the video. We are going to look at the feel of the video, if it's in a good space or not, alright? So let's move ahead, and how do you get more of the feel is by tying it with a nice voiceover, at the same point of time, tying it with a very good music piece.

[06:14:03] **Shantanu Tungare:** So let's prompt, and now, you must have used Suno before. For people who do not know what Suno is, you can generate a complete music track with this. I have a subscription of Suno because I'm using it for my clients at this stage, and sometimes to just to have fun, so I'm using the 5.5 model, and I'm V.5 also, so that you get an idea what will happen when you get the subscription. For the musicians out there, you can also generate audio

[06:14:27] **Shantanu Tungare:** You can add in your lyrics. You can make changes in the audio also if you use Pro Tools or anything like that. So, with that being said, let's generate audio for the star children.

[06:14:38] **Shantanu Tungare:** I want a music piece, super progressive, very sophisticated, orchestral,

[06:14:46] **Shantanu Tungare:** for the movie that I'm working on called The Star Children. Think of it like Interstellar and Dune, or probably a Hans Zimmer making the music track. It should have very catchy lyrics, not too many lyrics, haunting vocals. It is about, the generation.

[06:15:04] **Shantanu Tungare:** With the current generation who does not want to look at the screens, but they want to look at the stars. Alright, there is one really beautiful line that I have, which I want you guys... want you to also incorporate in this particular track.

[06:15:17] **Shantanu Tungare:** Now, what is the line that I really liked?

[06:15:19] **Shantanu Tungare:** Okay, one second...

[06:15:23] **Shantanu Tungare:** There is a nice line which is there. One second, the prompt is getting copied here. Okay.

[06:15:29] **Shantanu Tungare:** Copy the prompt here, and then the really nice line which we can ask this model to generate, we were not born to scroll, we were born to explore.

[06:15:40] **Shantanu Tungare:** Okay?

[06:15:43] **Shantanu Tungare:** We were born to explore.

[06:15:46] **Shantanu Tungare:** We were not bound to scroll. Let's take it.

[06:15:52] **Shantanu Tungare:** Use this.

[06:15:53] **Shantanu Tungare:** Use these lyrics.

[06:15:55] **Shantanu Tungare:** Alright?

[06:15:56] **Shantanu Tungare:** And you can also select an instrumental, but let's... let's see. I'm super excited what track will come out.

[06:16:02] **Shantanu Tungare:** Okay, this is version 5.5.

[06:16:04] **Shantanu Tungare:** Which generally has more depth in terms of the audio.

[06:16:09] **Shantanu Tungare:** let it take its time. What we will now do is just play the track, watch the videos that we have generated, so we know what track to choose, okay? So guys.

[06:16:17] **Shantanu Tungare:** I hope you guys are excited, because this is going to tie everything together.

[06:16:22] **Shantanu Tungare:** So it's calling it Star Children Good. It will also generate an artwork by itself.

[06:16:26] **Shantanu Tungare:** Let's play this one.

[06:16:30] **Shantanu Tungare:** And let's watch the video.

[06:16:56] **Audio shared by Shantanu Tungare:** The room is blue clouds.

[06:17:05] **Audio shared by Shantanu Tungare:** We were not born to scroll. We were born to explore.

[06:17:12] **Audio shared by Shantanu Tungare:** A hush in my chest.

[06:17:15] **Audio shared by Shantanu Tungare:** We were born to scroll, and we were born to live more.

[06:17:19] **Audio shared by Shantanu Tungare:** We were not going to hear something. We were born to explore.

[06:17:23] **Audio shared by Shantanu Tungare:** Cool!

[06:17:24] **Audio shared by Shantanu Tungare:** meal.

[06:17:31] **Audio shared by Shantanu Tungare:** It's the noise!

[06:17:38] **Audio shared by Shantanu Tungare:** We were not... We were born to explore.

[06:17:49] **Audio shared by Shantanu Tungare:** We were born to... Go to the dark!

[06:18:00] **Audio shared by Shantanu Tungare:** We're not.

[06:18:07] **Audio shared by Shantanu Tungare:** 2... Explore.

[06:18:14] **Audio shared by Shantanu Tungare:** We keep our knees.

[06:18:18] **Audio shared by Shantanu Tungare:** In a small ride.

[06:18:23] **Audio shared by Shantanu Tungare:** Hands on the head.

[06:18:26] **Audio shared by Shantanu Tungare:** All the way.

[06:18:27] **Audio shared by Shantanu Tungare:** in the sky.

[06:18:30] **Audio shared by Shantanu Tungare:** The future is not...

[06:18:41] **Audio shared by Shantanu Tungare:** We still can play.

[06:18:51] **Audio shared by Shantanu Tungare:** Nico!

[06:18:58] **Audio shared by Shantanu Tungare:** We were not...

[06:19:02] **Shantanu Tungare:** What do you guys think? Cool, right? Let's hear the another... just another track.

[06:19:06] **Shantanu Tungare:** Yeah, let's hear the...

[06:19:12] **Shantanu Tungare:** Okay, so this track will be in the different, zone, but the same lyrics, so let's hear it and watch the videos again.

[06:19:47] **Audio shared by Shantanu Tungare:** We were not born to scroll. We were born to explore. But I feel the night. We were not born to scroll. We were born to explore.

[06:20:00] **Audio shared by Shantanu Tungare:** In my bone.

[06:20:02] **Audio shared by Shantanu Tungare:** I hear something old.

[06:20:06] **Audio shared by Shantanu Tungare:** Cause...

[06:20:18] **Audio shared by Shantanu Tungare:** Eagles!

[06:20:24] **Audio shared by Shantanu Tungare:** We will not...

[06:20:28] **Audio shared by Shantanu Tungare:** We were born!

[06:20:29] **Audio shared by Shantanu Tungare:** And two... We were not...

[06:20:36] **Audio shared by Shantanu Tungare:** We were born!

[06:20:37] **Audio shared by Shantanu Tungare:** One, two, eight!

[06:20:52] **Audio shared by Shantanu Tungare:** We were born.

[06:20:53] **Audio shared by Shantanu Tungare:** To explore.

[06:21:03] **Audio shared by Shantanu Tungare:** We keep our names in a small, bright fire.

[06:21:08] **Audio shared by Shantanu Tungare:** of awakened sky.

[06:21:11] **Audio shared by Shantanu Tungare:** My future is not in a small frame And the wonder we stand.

[06:21:32] **Audio shared by Shantanu Tungare:** Let's go!

[06:21:35] **Shantanu Tungare:** Okay, I think we'll all get lost in that track as if, like, some cinema is happening, but it's just good. What do you guys think? First track or the second track?

[06:21:44] **Shantanu Tungare:** Yeah. We were all, like, we were all, like, keeping quiet and listening to the track, but it's good. This is what the emotion it should have created and did, right? Like, with music and watching it all together. Of course, it's not a full film yet, but still you get the vibe, right? Like, so let's... let's, for example, take this first track.

[06:22:01] **Shantanu Tungare:** Let's take this first track, let's take the MP3 audio. Now, if you want to use Suno, you can't use it for commercial purposes. Of course, you can use it in terms of,

[06:22:12] **Shantanu Tungare:** You know, just for your hobby's sake, but if you want to use it professionally, you have to take the subscription. Just minute \$8, fellows. Minute \$8, it will solve your problem.

[06:22:22] **Shantanu Tungare:** Now, let's move to the final stage, because we are in a good space. I'm going to show you another tool which will edit it out for you. Now, if you guys want to do professional editing, there is a tool called as Premiere Pro, DaVinci Resolve, Filmora, CapCut, all of this you can manually edit. Filmora has some AI capabilities.

[06:22:41] **Shantanu Tungare:** But if you want to create something on scratch, and something which you feel like you don't want to waste too much time in the first cut, there is a tool which I'm showing you right now quickly, which is the final stage of this particular session. It's called Use Cardboard. Now, this tool will help you

[06:22:57] **Shantanu Tungare:** basically get your first cut out, or sometimes your complete social media asset out. I show you how. What I need to do is just and just... I've made a folder already of the star children.

[06:23:08] **Shantanu Tungare:** Just drag and drop all the details, which includes the voiceover, the music, and all the clips. Drag and drop here.

[06:23:15] **Shantanu Tungare:** Okay? Once these are all here, just prompt, and it will edit things for you. Of course, you have to make manual changes, or prompt-wise changes, but it helps you remove the noise, or automate the noise of the first cut.

[06:23:30] **Shantanu Tungare:** Make this into a super cinematic teaser. There is a voiceover which will help you identify the shots to be used.

[06:23:37] **Shantanu Tungare:** In some of the shots, there is a grid in the start, so cut that grid, don't use that grid. Don't use the shot where there is probably some warping happening. Of course, take a call when it comes to building it into proper visual.

[06:23:51] **Shantanu Tungare:** There is a logo unit that I'm also adding, called as the Star Children. Use that in the end. Do not cut the music abruptly. Make sure the voiceover is also heard. Make sure you use the section of the track where there are lyrics, which has high crescendo, and do not end, as I said before, things abruptly. It should feel like a...

[06:24:12] **Shantanu Tungare:** full Hollywood production teaser, alright? So, giving this base prompt on what I expect, I also asked it to generate a video. That's because the last logo was not ready, so let's just...

[06:24:23] **Shantanu Tungare:** See if the last logo is ready.

[06:24:26] **Shantanu Tungare:** That's... One second, Halo generally does a job which is really fast.

[06:24:32] **Shantanu Tungare:** Yeah, so I made this into a proper video, and let's take this, download this, and put it in used cardboard.

[06:24:41] **Shantanu Tungare:** One second... yeah.

[06:24:45] **Shantanu Tungare:** Okay, so I've added all the details here, see the music it's reading, okay? 11 Labs, audio, voiceover, everything is here.

[06:24:54] **Shantanu Tungare:** I really like if you would start off with the shot where the camera moves inside the spaceship.

[06:25:03] **Shantanu Tungare:** Which is, sort of...

[06:25:05] **Shantanu Tungare:** Camera travels through the exhaust of the spaceship into the window. I quite like that tri- shot. I want to start off with that.

[06:25:14] **Shantanu Tungare:** The emotion also has to come out where the girl is confused looking at people getting sucked into the mobile phone. So put in all the directions which you feel can work out really well, and then have it improve the prompt for you, okay?

[06:25:29] **Shantanu Tungare:** Default 16 by 9, because individuals aspect ratio is 16 by 9.

[06:25:35] **Shantanu Tungare:** Okay, voiceover script... There is a clip of...

[06:25:40] **Shantanu Tungare:** 11 Labs, which is the voiceover that I've approved, use that only.

[06:25:45] **Shantanu Tungare:** Okay? So I've told it this detail, and let's hit generate. Now, what the AI agent will do will completely go through the footage and all the details and build that entire project for us. Alright, so with that, we are officially into the... we are done. But I'm going to quickly run you guys through what we have done.

[06:26:04] **Shantanu Tungare:** Okay?

[06:26:06] **Shantanu Tungare:** while the AI agent is working for you, can you tell me in the chat, what did it take for us to build this storyline?

[06:26:12] **Shantanu Tungare:** Tell me in the chat.

[06:26:13] **Shantanu Tungare:** Like, we have reached the final stage.

[06:26:16] **Shantanu Tungare:** What do you think took us to build this particular storyline? Patience, somebody says. Somebody very sweetly sent my name. Narrative, yes, we required a particular storyline, a narrative, we required a very clear goal, but we required us.

[06:26:35] **Shantanu Tungare:** me and you, sitting in this session, to come up with a particular storyline, alright? Our objective was clear, we generated the idea, we took the story out, and we optimized it, alright? So now tell me, should you rely completely on AI for your story building? What do you guys think?

[06:26:53] **Shantanu Tungare:** Nope. We do not need to rely completely on AI for story building. Now, there are some of you who are automating the content, which is okay, but...

[06:27:02] **Shantanu Tungare:** the process was fun because we created everything from scratch. It gave us a good feeling. If AI can't have that feeling, why are you not making yourself go through that particular feeling, alright? So, like, for example, one more thing I'll quickly run you guys through.

[06:27:18] **Shantanu Tungare:** We did the production, which means we went through the script, built the script, we divided the production phase into two.

[06:27:25] **Shantanu Tungare:** which is building images, then we built the videos from it, and now the post-production is happening, which has brought us to the end of the entire session. Let's see what used cardboard is doing. Use Cardboard is now going through all the details, and it will put out all the details for you.

[06:27:40] **Shantanu Tungare:** Alright, we are in a very good space, so till the time this AI agent is working, I'm going to also keep the screen sharing on, but happy to take in as many questions as you guys have. So, Fani, if you can please,

[06:27:53] **Shantanu Tungare:** Curate and moderate the questions, and we can...

[06:27:56] Phani Krishna - Outskill: Yes, I think one... there's just one question that kept coming in multiple times, which is regarding the pricing, or the costing, or if someone is getting started with image and video generation, how would you suggest them to go about these tools?

[06:28:11] **Shantanu Tungare:** If somebody's getting started, like I showed you, use a CREA. There is one more tool called as Higgsfield. If you're into the marketing space, use Higgs field because it has multiple presets. This is Higgs field.

[06:28:22] **Shantanu Tungare:** It has multiple presets for y'all. It has a marketing studio also, if you want to make a film, cinema studio is really good. Me and my team sometimes make things, from this, from scratch, actually. There are, so, these tools are, like, \$30 a month, \$22 a month, sometimes \$50 a month.

[06:28:41] **Shantanu Tungare:** But you can create multiple videos out of that. So, in a way, if you're starting an agency, more or less, between these LLMs and diffusion models, everything covered, you should be in a good space by spending \$150 to \$200.

[06:28:58] Phani Krishna - Outskill: Absolutely, absolutely. And also, one other thing is,

[06:29:03] Phani Krishna - Outskill: if you are extensively generating a lot of images and videos, they also end up giving you bulk deals, because of which your overall credits can, you know, you can buy many credits at the same time, and that is the reason why you should never look at it in the form of, how much is this particular video costing me? Rather, on a monthly level, what is

[06:29:22] Phani Krishna - Outskill: the cost that you're incurring, and the ROI, or the gains that you're incurring with this...

[06:29:28] **Shantanu Tungare:** Absolutely, absolutely. I would... before starting the session, I said that there were some sponsored posts that I have. So, recently, funny, I partnered with this one company called InVideo. Are you familiar with InVideo?

[06:29:39] Phani Krishna - Outskill: Oh, yes.

[06:29:39] **Shantanu Tungare:** You're familiar, right? So, they were looking at my Ancient Indian Billionaire's work, they wanted me to break it down. So, do you mind if I share the audience what's possibility of the filmmaking?

[06:29:49] Phani Krishna - Outskill: Thank you.

[06:29:50] **Shantanu Tungare:** Show them the trailer.

[06:29:51] Phani Krishna - Outskill: Yes.

[06:29:52] **Shantanu Tungare:** Yeah, so I'll just quickly show you guys what we are doing and building, one second. This is... I'll... I have not put it out there yet, but probably by tomorrow I'll put it out, but if you're in the session, I want you guys to take a look at what's the possibility. Of course, I'm still editing some part of it, but take a look at this.

[06:30:33] **Audio shared by Shantanu Tungare:** There was a dime.

[06:30:36] **Audio shared by Shantanu Tungare:** when Lanka... did not belong to Ravana.

[06:30:40] **Audio shared by Shantanu Tungare:** It belonged.

[06:30:41] **Audio shared by Shantanu Tungare:** to Kuberra.

[06:30:43] **Audio shared by Shantanu Tungare:** A city of gold.

[06:30:46] **Audio shared by Shantanu Tungare:** kingdom.

[06:30:49] **Audio shared by Shantanu Tungare:** Blessed beyond imagination.

[06:31:00] **Audio shared by Shantanu Tungare:** But wealth has always attracted ambitions.

[06:31:04] **Audio shared by Shantanu Tungare:** Ambition burned brighter.

[06:31:06] **Audio shared by Shantanu Tungare:** Ravana's. Kubera lost a kingdom.

[06:31:11] **Audio shared by Shantanu Tungare:** Ravana gained This is the story of how Lanka changed hands. The story of how Kubera's Lanka

[06:31:23] **Audio shared by Shantanu Tungare:** became Ravana's life.

[06:31:58] **Audio shared by Shantanu Tungare:** This is the story.

[06:32:00] **Audio shared by Shantanu Tungare:** Of the dear kingdom changed hands.

[06:32:02] **Audio shared by Shantanu Tungare:** And history changed forever.

[06:32:07] **Shantanu Tungare:** So, before Rama, and for people who do not know, before Rama, and there was, Lanka, which was... what do you... what do you think, Fan? You like it? You don't like it?

[06:32:15] Phani Krishna - Outskill: Very, very good, very, very good.

[06:32:18] **Shantanu Tungare:** Yeah, right? So, this story I'm exploring with the ancient Indian villain, I think it's going to be really good. So, any other questions? Happy to take in also. I think this one is taking some time. Yes, please.

[06:32:29] Phani Krishna - Outskill: Yeah, no, people who are, you know, mentioning about the video lagging or breaking, that is purely because of Zoom, right? So, when Shantanu uploads it, you know, you can go ahead and watch that video entirely as well. And, you know, AI-generated videos are not videos that will break.

- [06:32:46] **Shantanu Tungare:** Yeah, and also, funny, sorry to cut you, but wanted to just add in some point, actually, about this particular video. It took me many iterations to come up with this. AI video creation is not easy. You require to have the right vision, and at the same point of time, you require to have the right patience.
- [06:33:04] **Shantanu Tungare:** To build it. Of course, it won't... to shoot all of this would have taken lakhs of rupees, crores of rupees, and, like, a lot of budget, but...
- [06:33:13] **Shantanu Tungare:** it still is a process which requires a lot of hard work. So, right now, we built something like a first cut, but imagine making this into a film, it will take at least a week's time.
- [06:33:24] Phani Krishna - Outskill: Yeah, it's all an iterative process, and, you know, that is what I've been trying to tell people, that with AI, all of these things are iterative processes, but, you know, the point is that everybody can do it if you want to. You know, gone are those days when you have to depend on, probably, let's say, a filmmaker to get your film generated, right? You can do it yourself, it's, of course, a matter of time, and
- [06:33:47] Phani Krishna - Outskill: the learning curve that you will essentially have to take. A lot of people want to connect with you, Shantanu, so maybe...
- [06:33:53] Phani Krishna - Outskill: I'll pause the chat, and you can drop in Your links, once again.
- [06:33:59] **Shantanu Tungare:** Sure, I'll do that. I would love for people to, spend time on my social media channels, only and only to understand what's possible when you
- [06:34:09] **Shantanu Tungare:** optimize your entire voice with AI. You see multiple links of mine. LinkedIn, I put out all the entire process. YouTube, all my narrative room videos come in, the conversations, which will really help you understand where exactly is AI reaching. Instagram is where I put in all the creative elements. Substack is where I write in my heart out when it comes to where the world is leading in terms
- [06:34:33] **Shantanu Tungare:** of AI. X is where I give my political opinions. So...
- [06:34:38] **Shantanu Tungare:** I don't sit and make my changes, you know, based on each and every platform. I put in what I feel like, and I use AI to amplify my voice according to the DNA of the particular platform, alright? So I urge you all to use this particular process, and build yourself a personal brand, and tell your particular story, because that is the new premium that will really help you.
- [06:35:03] **Shantanu Tungare:** So, this is just a tip which I want you guys to take in from this particular session as well.
- [06:35:09] Phani Krishna - Outskill: Absolutely, and what everybody also needs to understand is that these AI models are just getting better and better. Like, probably 6 to 8 months back, you might not have gotten the kind of outputs that you're getting today, and 6 months later, the models are going to be entirely different and even more powerful. So.
- [06:35:27] Phani Krishna - Outskill: you know, people who are saying that, oh, this looks AI-generated and all of that, like we said, what we wanted to show you today was the process. You sit on it for a few more hours, and, you know, you will be able to
- [06:35:41] Phani Krishna - Outskill: create some very, very realistic, you know, images and videos. Is the video ready, Shantanu? I know you have a.
- [06:35:49] **Shantanu Tungare:** Okay, I did.
- [06:35:50] Phani Krishna - Outskill: cats as well.
- [06:35:51] **Shantanu Tungare:** Oh, yeah, yeah, just one second, I'm also waiting, because, use cardboard is taking its own sweet little time, so I've told it that, why is it taking time? So, let it also respond. So, it's right now still,
- [06:36:04] **Shantanu Tungare:** I've also told it, start the edit fast.

[06:36:06] **Shantanu Tungare:** Like, nothing technical in the conversation that I have with AI. So let's see what we have.

[06:36:14] Phani Krishna - Outskill: Yes.

[06:36:15] **Shantanu Tungare:** Okay, so it's getting all the details. What it will now do, basically, is have put in all the details here.

[06:36:24] Phani Krishna - Outskill: And people who are asking about this particular tool, this is called UseCardboard.com. This entire editing was manual until today, but now these agentic tools are also coming up, which are helping with editing. Of course, it will not be to the extent that you might imagine at this point of time, but these are also getting better and better, right? But like Chantru mentioned, for the first cut edit.

[06:36:46] Phani Krishna - Outskill: You could use something like a used cardboard today. Of course, at this point of time, it's a paid tool. There is no free tire or free credits that they give, but,

[06:36:56] Phani Krishna - Outskill: you could also do this using a Canva or, you know, DaVinci Resolve or CapCut. I've actually gone ahead and shared the session notes with all of you. In the session notes, we have actually covered all of these things, so you can check out that document. I think the video is also... you see how it is coming up on the screen, right?

[06:37:14] **Shantanu Tungare:** Exactly, so it's added the music here, it's added the voice over here, and now it's doing those cinematic changes to it. Now, based on the prompt, it will now do all of these things. But this is to be a manual process. It still is a manual process.

[06:37:28] **Shantanu Tungare:** But at least to have AI reach a point where this noise and editing is a very hectic process. You can shoot in one day, but you can keep on editing for months.

[06:37:37] **Shantanu Tungare:** But getting that friction out is what this tool is really impressing me about. And plus, for social media, how many editors would you keep? In my company, we have taken a used cardboard to edit all my social media assets, because you don't need specialized assets when I'm just speaking.

[06:37:51] **Shantanu Tungare:** You know? So, something like that. Or, at least, whenever there is a quick client delivery to have, first cut, we get it out from used cardboard, so...

[06:38:00] **Shantanu Tungare:** I think it's pretty good, it's pretty great.

[06:38:04] **Shantanu Tungare:** Alright, so let's watch the video, fellows, which we all created. It might not be the best, but let's... let's see who's... who's the judge... who's the judge here?

[06:38:12] **Audio shared by Shantanu Tungare:** Every generation inherits a world.

[06:38:16] **Audio shared by Shantanu Tungare:** Ours inherited a question.

[06:38:20] **Audio shared by Shantanu Tungare:** What comes next?

[06:38:22] **Audio shared by Shantanu Tungare:** While everyone else was looking down, we looked up.

[06:38:28] **Audio shared by Shantanu Tungare:** The Star Children.

[06:38:35] **Shantanu Tungare:** That's a good teaser.

[06:38:36] **Shantanu Tungare:** That's a very good teaser. Let's watch it again. I would use some nice, music piece from here.

[06:38:42] **Shantanu Tungare:** Yeah, one second... yeah.

[06:38:45] **Shantanu Tungare:** Let's use some part of the music which is better, and I'll start the voiceover a bit late.

[06:38:52] **Shantanu Tungare:** Yeah.

[06:38:54] **Audio shared by Shantanu Tungare:** The room is blue clouds.

[06:38:58] **Audio shared by Shantanu Tungare:** Every generation inherits a world. Ours inherited a question. What comes next?

[06:39:09] **Audio shared by Shantanu Tungare:** While everyone else was looking down, We looked up.

[06:39:15] **Audio shared by Shantanu Tungare:** The Star Children.

[06:39:17] **Shantanu Tungare:** hey, where is our lady who's speaking that dialogue? That would have been really nice, right? Like, so now, if I prompt,

[06:39:25] **Shantanu Tungare:** increase the duration a bit, use some more parts of the music, like I've done, and also add, after the star children, add the lady, who speaks the dialogue. We were not born to scroll.

[06:39:38] **Shantanu Tungare:** Alright, so let's... you can also do this, but what do you guys think? Is it in a... do you guys like the process? Did you enjoy the entire video? What do you think, funny?

[06:39:48] Phani Krishna - Outskill: I absolutely loved it.

[06:39:52] **Shantanu Tungare:** It is easy.

[06:39:52] Phani Krishna - Outskill: And, you know, it always surprises me, no matter how many times I see this process.

[06:39:57] Phani Krishna - Outskill: You know, how fast you can, you know, go from an idea to concept to building that entire concept out as well.

[06:40:06] **Shantanu Tungare:** Yeah. Yeah, it's definitely reached a place, but clarity of thought is the main ingredient. Being human in the center is the main ingredient. So I hope, like I said before, we have divided the entire session into four acts, but

[06:40:22] **Shantanu Tungare:** The fourth act is right now when people need to decide why are they and what exactly are they going to use this process for.

[06:40:29] **Shantanu Tungare:** Exactly.

[06:40:29] Phani Krishna - Outskill: Exactly.

[06:40:30] Phani Krishna - Outskill: And these days, a lot of people are also reaching out to me, mentioning that AI is becoming costly for them to handle, and that is because you're not using AI in the right... for the right use cases. If you're using.

[06:40:41] **Shantanu Tungare:** Yeah.

[06:40:41] Phani Krishna - Outskill: Using it for the right use cases, you will actually be able to make money as well.

[06:40:46] **Shantanu Tungare:** Absolutely.

[06:40:47] **Shantanu Tungare:** Let's watch the changes which I've asked, let's watch it again, because I'm going to upload the video as is on my LinkedIn anyways, because...

[06:40:54] **Shantanu Tungare:** Why to make some changes when this is a first cut?

[06:40:59] **Audio shared by Shantanu Tungare:** The room is blue clouds.

[06:41:03] **Audio shared by Shantanu Tungare:** Every generation inherits a world. Ours inherited a question. What comes next?

[06:41:14] **Audio shared by Shantanu Tungare:** While everyone else was looking down, We looked up.

[06:41:20] **Audio shared by Shantanu Tungare:** The Star Children. We were not born to scroll.

[06:41:25] **Audio shared by Shantanu Tungare:** We were born to explore.

[06:41:28] **Shantanu Tungare:** Nice, good. So yeah, you keep on changing, but good, good, I think we have finished the video, so...

[06:41:34] **Shantanu Tungare:** Thank you all for joining in. Thank you so much, Fani. It was a pleasure as usual. It was a good concept today. It was really inspiring a concept.

[06:41:41] Phani Krishna - Outskill: Oh yes, oh yes. And I hope that, you know, people take this as an inspiration to go ahead and try out this entire process all by yourself. People who mentioned that you were getting overwhelmed, it was getting confusing because a lot of tools were involved, that is how you

[06:41:55] Phani Krishna - Outskill: generate things with AI, that is how you build with AI, and you just have to try it once or twice for you to get the entire, you know, workflow all by yourself. But, Shantzu, thank you for being here.

[06:42:06] Phani Krishna - Outskill: I will take it forward from here, yeah.

[06:42:10] **Shantanu Tungare:** Awesome. Thank you so much, guys. All the best for your journey. Thank you so much, Funny. I'll see you around.

[06:42:15] Phani Krishna - Outskill: Okay, perfect.

[06:42:18] Phani Krishna - Outskill: All right, everyone, with that, we come to the end of image and video generation. I absolutely, I mean, beyond of the concept that we picked today, beyond of what we generated today, you know, Gina... Gina...

[06:42:33] Phani Krishna - Outskill: please ask your question. Again, there are too many questions and comments flowing in at this point of time, so I obviously am not able to pick every question that is coming up, but I'm trying to address the broader buckets that people are asking their questions around. And, you know, what I truly

[06:42:52] Phani Krishna - Outskill: there are two things that I'm seeing on the chat coming up repeatedly. One is regarding the pricing.

[06:42:57] Phani Krishna - Outskill: Or the costing of generating such images and converting them to videos. And the second is regarding the copyrights and whether you will be able to make money off what you are building or generating with AI. Absolutely, yes. Regarding the copyrights.

[06:43:13] Phani Krishna - Outskill: if you're on the paid plans of all of these tools, let's say, Kriya, you're using a paid plan, or Suno, you're using a paid plan, the copyrights lie with you, and

[06:43:23] Phani Krishna - Outskill: what is not monetizable on YouTube, if I just tell you about it, and I'll just pause the chat, because there are people like you, Raj, who are continuously asking the same question again and again, because of which I'm not able to see the actual question, so I've just paused the chat, but

[06:43:40] Phani Krishna - Outskill: you know, platforms like YouTube, when they say that they will not allow you to monetize AI-generated content, they don't allow you to monetize text-to-video, because that is something that everybody today can do.

[06:43:51] Phani Krishna - Outskill: But they allow you to monetize content, or content that you're putting out which is creative by nature.

[06:43:58] Phani Krishna - Outskill: and is adding value to the entire ecosystem can always be monetized. And when you think about monetization, there are two parts to it. One is the platform itself paying you for the views and the retention that you're generating. The other part of monetization is if you are getting

[06:44:16] Phani Krishna - Outskill: Views that are valuable.

[06:44:18] Phani Krishna - Outskill: Brands will approach you and start paying you for the content that you're putting out, right? And the second, or the latter strategy that I mentioned, which is brands paying you, is what gets you a lot of, I mean, that is what essentially is monetizable, rather than the platform

[06:44:35] Phani Krishna - Outskill: giving you money for the content that you're putting out, right? So...

[06:44:39] Phani Krishna - Outskill: we at Outskill, if you look at WebHub's content, be it on Instagram, be it on YouTube, all of it is AI-generated, and the reason why we do that, the reason why so much content gets pushed out is because we are able to generate that revenue back.

[06:44:56] Phani Krishna - Outskill: that we are putting into all of these AI models and AI tools, right? That is how you need to think about it. Don't just use all of these AI tools for fun.

[06:45:07] Phani Krishna - Outskill: use them in places that'll help you make that money back as well, right? That is the perspective that everybody needs to have. The other question that came in quite a lot was costing of AI models, diffusion models primarily.

[06:45:21] Phani Krishna - Outskill: Inside of CRIA, you would have seen that every diffusion model has something called as

[06:45:27] Phani Krishna - Outskill: compute units. It's just like...

[06:45:30] Phani Krishna - Outskill: the framework that Dilip also explained today, right? When to use Opus versus when to use Sonnet versus when to use the Haiku family. Similarly, in the diffusion model space, you have so many different models that you can use as of today. Depending on the complexity of the image that you're generating, you use the model that has

[06:45:51] Phani Krishna - Outskill: high... I mean, if you're generating a very complex image, you use a model that has

[06:45:56] Phani Krishna - Outskill: or is consuming higher compute units. If you are making a small edit to an existing image, you could probably use an AI model that is probably consuming lesser compute units, right? But no matter how much I speak about it, no matter how much Shantanu speaks about it.

[06:46:13] Phani Krishna - Outskill: You will not understand this unless you go ahead and try it out all by yourself. And for that reason, if you open this drive link right now.

[06:46:24] Phani Krishna - Outskill: Let me put it up once again on the chat.

[06:46:29] Phani Krishna - Outskill: If you open up this drive link at this point of time, you will see that inside of this, I will share my screen.

[06:46:39] Phani Krishna - Outskill: You, of course, have, you know, session notes.

[06:46:43] Phani Krishna - Outskill: Wherein, you have everything on image and video generation as well. What are the tools that you should be using, how do you prompt, and what are the workflows that you should be using? We have also gone slightly above what was covered in this particular session itself, because this entire document has been created with transcripts of many image and video generation sessions that we have gone ahead and taken, so

[06:47:07] Phani Krishna - Outskill: that you get the fullest knowledge through this document, right? But...

[06:47:11] Phani Krishna - Outskill: you find all of the top AI image models right here. You find all of the top AI video models as of June 2026 right here. You can explore all of these models.

[06:47:23] Phani Krishna - Outskill: inside of a wrapper like CREA, and you don't have to pay for these models separately when you're using a wrapper like CREA, because Kriya by itself has a subscription plan, and somebody was asking this, so I will reiterate it.

[06:47:38] Phani Krishna - Outskill: inside of CREA, or Kling, or Higgs field, there are multiple subscription plans that are available. Let us say you want to specifically use CDance 2.0, which is the best video generation model available out there. CDance 2.0 might not be available on the basic subscription plan of CREA.

[06:47:57] Phani Krishna - Outskill: And you will be able to find this in the pricing section. So when you go into the pricing section of any platform.

[06:48:06] Phani Krishna - Outskill: you will be able to find all of this right here, right? When you click on See All Features, you will be able to find all the features that you are getting with the Basic Plan, the Pro Plan, the Max Plan, the Business Plan, and the Enterprise Plan as well, depending on what your usage is going to look like. Now.

[06:48:24] Phani Krishna - Outskill: Should everybody go ahead and take a plan? Absolutely not. When you're learning, all of these tools give you

[06:48:31] Phani Krishna - Outskill: free credits that you can start your generations with, and those are the free credits that you can use to get started or get your hands dirty. And I'll tell you how you can pick that concept as well, but we spoke about prompting frameworks.

[06:48:45] Phani Krishna - Outskill: all of that has been put down right here. You can have this document on the site as you go ahead and generate your first

[06:48:52] Phani Krishna - Outskill: film, or first movie. And for you to be able to do that, when you come back into the workbooks folder this time, do I...

[06:49:00] Phani Krishna - Outskill: Are all of you seeing my screen?

[06:49:05] Phani Krishna - Outskill: Give me a second.

[06:49:07] Phani Krishna - Outskill: Are all of you seeing my screen? Give me a thumbs up if you are.

[06:49:13] Phani Krishna - Outskill: Because when you go into the workbooks folder, right, you of course have all of the other workbooks here, but the last or the fourth workbook that has been uploaded, I call it the first SIP. It's a concept.

[06:49:28] Phani Krishna - Outskill: that we have gone ahead and, you know, created this workbook around. It's...

[06:49:33] Phani Krishna - Outskill: If you have never played around with image and video generation models, this could be your first AI film, right? It's a 15-second film around tea, or chai, like we call it in India. You could try this out, and you could go ahead and put this video out on

[06:49:51] Phani Krishna - Outskill: LinkedIn or Instagram, once you go ahead and create it, and you can tag us as well, and if your creation is good, we will go ahead and reshare it as well, just to inspire you or motivate you to go ahead and try your hands out on all of this. And for you to be able to do this, you don't have to take the paid plans.

[06:50:09] Phani Krishna - Outskill: Everything here is going to be on a free account without you having to even put in your card details and everything. I don't want that to be a blocker for anyone, so this particular concept is a very simple one. It'll probably require you to generate 3 to 5 images, not more than that.

[06:50:28] Phani Krishna - Outskill: And all the prompts that you need are also put in over here, but my expectation is not that you just copy-paste your prompts.

[06:50:36] Phani Krishna - Outskill: But you add your own flavor to what you're going ahead and generating. I quickly wanted to... how many of you have seen this movie called

[06:50:46] Phani Krishna - Outskill: I mean, you have obviously heard about it, but have you watched Durander 2?

[06:50:51] Phani Krishna - Outskill: Yes, no, on the chat if you have watched Durander too.

[06:50:56] Phani Krishna - Outskill: Lots of you saying yes, wow, wow. Do you want to see something that one of our community members generated with AI recently?

[06:51:05] Phani Krishna - Outskill: And it is inspired by Durander too. Do you want to see that?

[06:51:10] Phani Krishna - Outskill: I thought, you know, it's a quick video, completely generated with AI, and I thought it'll make sense for you to watch it, just so that you get that inspiration as well. I will go ahead... I love the energy and the excitement, so I'll quickly play this video. This was created by one of our learners.

[06:51:29] Phani Krishna - Outskill: Right? And if you have watched Durander 2, you... this...

[06:51:34] Phani Krishna - Outskill: you will, you know, be able to recognize this scene from the movie. Of course, every generation that you see here is done with AI. It's not done, or it's not a part of the movie directly, but

[06:51:47] Phani Krishna - Outskill: It's inspired by the movie, and we are encouraging this learner to go ahead and, you know, share this with the Duranda team as well, but let's give it a watch.

[06:52:07] Audio shared by Phani Krishna - Outskill: Kaltak.

[06:52:24] Audio shared by Phani Krishna - Outskill: dictating...

[06:53:03] Audio shared by Phani Krishna - Outskill: But it do.

[06:53:10] Audio shared by Phani Krishna - Outskill: Cell it to the home.

[06:53:40] Audio shared by Phani Krishna - Outskill: ya nahiota.

[06:53:57] Phani Krishna - Outskill: So yeah, I just wanted to show you this

[06:54:01] Phani Krishna - Outskill: So that you understand how realistic the creations can truly get if you spend time on this, right? This was done by one of our learners recently, and they shared it with us. I'll also, you know, share their name very soon with all of you once they're comfortable with it. But yes, you saw the actor in this particular, you know, video.

[06:54:24] Phani Krishna - Outskill: You should not go ahead and use

[06:54:28] Phani Krishna - Outskill: I mean, somebody was asking about this question, right? Like, can I go ahead and use any actor's image? Because I can as of today. You shouldn't be doing that unless you just... you're doing it with a purpose. Now, this person... now, our student created this.

[06:54:43] Phani Krishna - Outskill: because they wanted to share it with the directors and producers of the film itself, right? To...

[06:54:49] Phani Krishna - Outskill: to show their own skills. They are not using this to monetize anywhere. So, that is the responsibility that you need to take whenever you're trying to go ahead and create such things. But if you spend time, you could go ahead and generate some incredible things with AI. How do I write the prompt so that the character remains consistent? It's

[06:55:12] Phani Krishna - Outskill: Using the same prompting technique that we taught today as well, right? And you will find that in the session notes file. But it is about regenerations. It will not happen if you just try to do it in an hour, or if you're expecting things to happen with just a prompt to a video, making that expectation clear. But now.

[06:55:31] Phani Krishna - Outskill: But now, We come to the final leg of the mastermind.

[06:55:41] Phani Krishna - Outskill: We come to the final leg of the mastermind.

[06:55:45] Phani Krishna - Outskill: I want to first congratulate all of you for completing this entire mastermind end-to-end. I will go through the roadmap as well. There is also another file that has been uploaded onto your Google Drive, which is a monetization playbook. I will talk about that as well, but before I talk about that, there are a few bonuses that I want to give away.

[06:56:04] Phani Krishna - Outskill: to everybody.

[06:56:07] Phani Krishna - Outskill: Few bonuses to give away for everybody, so that you can continue your learning journey from this mastermind.

[06:56:14] Phani Krishna - Outskill: Yes, you will be getting the...

[06:56:17] Phani Krishna - Outskill: You will be getting the,

[06:56:19] Phani Krishna - Outskill: certificates as well, I'll talk about it, but pat yourselves on the back, you are on the right path. If you have sat through until now, you are on the right path, but

[06:56:31] Phani Krishna - Outskill: having coached a lot of people through masterminds like these already, I know that many people go back into their

[06:56:40] Phani Krishna - Outskill: Day-to-day work.

[06:56:42] Phani Krishna - Outskill: from, you know, Monday onwards, right? Tomorrow, all of you will be back to your workplaces, all of you will be back to your colleges or schools or wherever it is that you need to go.

[06:56:53] Phani Krishna - Outskill: It's not about using all of the tools that we showed over yesterday and today. It is about changing your mindset to start thinking AI. Identifying those use cases in your work where you can apply AI, not blindly, but

[06:57:10] Phani Krishna - Outskill: with a purpose, right? Like.

[06:57:13] Phani Krishna - Outskill: And that purpose should ideally be revenue generation or efficiency improvement, because if both of these are not happening, and you're trying to force-fit AI into a specific process.

[06:57:25] Phani Krishna - Outskill: you are just going to be burning money, and after some time, you will come back to us with a question that, hey, AI is becoming costly, it's not sustainable for us to use AI. Well.

[06:57:36] Phani Krishna - Outskill: it will not be sustainable if you are not able to generate higher revenue by implementing AI. I recently spoke about this on, you know, my LinkedIn profile as well. I would love for all of you to check that post out. I'll just share it with everyone so that you

[06:57:53] Phani Krishna - Outskill: get that mindset right, and this is something that senior leaders are also not understanding at this point of time. So, irrespective of how many years of experience you have.

[06:58:03] Phani Krishna - Outskill: You have gained a ton of knowledge over yesterday and today, believe it or not, tomorrow when you go back to your offices, talk to your managers, talk to your colleagues, ask them, or rather, educate them. Because when they hear... when they hear you speaking AI, they will be awestruck.

[06:58:22] Phani Krishna - Outskill: Based on all of it that you saw over yesterday and today. Don't you think... drop in a yes on the chat if you agree with what I'm saying, that your colleagues also might not know what you have learned over yesterday and today. Your managers also might not know. Your senior managers also might not know.

[06:58:38] Phani Krishna - Outskill: And they will have a very different impression of you when you go ahead and educate them about these things. And when you are educating them about AI,

[06:58:47] Phani Krishna - Outskill: Also, go ahead and speak about the cost.

[06:58:51] Phani Krishna - Outskill: and the revenue implication that needs to be mapped very well. Lot of people are not doing this at this point of time in the right way, because of which they are landing into that problem. And that is what made me write this post as well, which you can go ahead and check out.

[06:59:06] Phani Krishna - Outskill: Right?

[06:59:08] Phani Krishna - Outskill: No.

[06:59:09] Phani Krishna - Outskill: For you to be able to take your journeys forward from here, we're going ahead and giving you certain bonuses.

[06:59:15] Phani Krishna - Outskill: Bonus number one.

[06:59:17] Phani Krishna - Outskill: is, of course, the whole Google Drive link, which has your session notes, which has extensive workbooks.

[06:59:25] Phani Krishna - Outskill: Ankit Kumar, if you want to be an intern under me, the first criteria that you should meet is to not spam.

[06:59:33] Phani Krishna - Outskill: Because you're doing that, I don't think you have the...

[06:59:38] Phani Krishna - Outskill: Right intent, probably, right? So please don't spam.

[06:59:42] Phani Krishna - Outskill: And you can write to my official email ID if you are looking at opportunities, or whatever it is, right? But...

[06:59:49] Phani Krishna - Outskill: all of you, all of you are going to be getting all of these workbooks, and these workbooks will stay with you for however long you would want them to stay with you, right? Each workbook, if you have already not looked into them, each workbook is very, very self-explanatory. So, if you are ever telling

[07:00:08] Phani Krishna - Outskill: Anybody that this mastermind was not hands-on.

[07:00:13] Phani Krishna - Outskill: You did not get to practice.

[07:00:15] Phani Krishna - Outskill: Over yesterday and today.

[07:00:17] Phani Krishna - Outskill: you are basically giving yourself excuses, right? We debated a lot around this. You know, and I'm addressing this because I just saw someone's comment some time back that, you know, we didn't get to practice over yesterday and today. The problem is, we have thousands and thousands of people on this call, and if we were

[07:00:36] Phani Krishna - Outskill: Doing the session in a do-it-along format?

[07:00:40] Phani Krishna - Outskill: we would not have been able to cover so much that we were able to cover over yesterday and today. Our intent, rather, was to show you everything, and then give you these workbooks, so that you can practice on your own. And if you're getting stuck, you can always reach out to me or our team on our official email IDs, and we will help you out. But I don't think you will even get stuck, because

[07:01:04] Phani Krishna - Outskill: Everything is broken down into step-by-step processes right here, based on what we already showed you.

[07:01:12] Phani Krishna - Outskill: And I'll also tell you another thing, right? Along with the workbooks, Along with the workbooks.

[07:01:19] Phani Krishna - Outskill: When will you share the workbooks? The workbooks are already there in the Google Drive link, and I've shared the Google Drive link already. I can put it up on the chat once again.

[07:01:31] Phani Krishna - Outskill: Okay, sorry, one second, that is the LinkedIn post that I was talking about, but yes, here is the drive link. Sorry, sorry.

[07:01:40] Phani Krishna - Outskill: Here is the Drive link. And the roadmap is also in the Google Drive link, I will speak about it. But apart from these workbooks and resources, you also, everybody who is listening to me right now, in the next 48 hours, 24 to 48 hours is what Bonus 2 is going to take for us to give you.

[07:01:59] Phani Krishna - Outskill: But you're going to be getting the recordings of all of these sessions.

[07:02:04] Phani Krishna - Outskill: How do you feel about that?

[07:02:08] Phani Krishna - Outskill: I kept lying to you, I kept telling everybody that recordings will not be provided, because had I told you that we would be giving the recordings to you, you would not have sat through all of these sessions this weekend. Procrastination would have kicked in, and you would have thought that, hey, let me learn all of this.

[07:02:24] Phani Krishna - Outskill: next week or the week after. And that is not how it works with AI specifically. If you're learning something else, like marketing or product or design.

[07:02:34] Phani Krishna - Outskill: You can always learn at your flexibility, but at the pace at which AI is evolving, you have to learn it now if you have already not started learning it.

[07:02:45] Phani Krishna - Outskill: And that was the intent.

[07:02:47] Phani Krishna - Outskill: The recordings will be given to you in the next 24 to 48 hours. They'll come up in the same Google Drive link.

[07:02:57] Phani Krishna - Outskill: Rawki Raj, if you're not seeing other people's messages, that's okay.

[07:03:02] Phani Krishna - Outskill: nobody's able to see other people's messages, right? But please don't spam. It becomes very difficult to read messages that matter when you try to post the same message multiple times, right? But, just to clarify to everyone, 24 to 48 hours

[07:03:17] Phani Krishna - Outskill: We will upload all of these recordings to a YouTube playlist, and we will be uploading that YouTube playlist in your DriveLink itself. So you're going to be seeing a fourth folder here.

[07:03:28] Phani Krishna - Outskill: Where?

[07:03:29] Phani Krishna - Outskill: We will be uploading the recordings of yesterday's sessions and today's sessions as well, and you're going to have continued access to these recordings so that you can practice as you use the workbooks as well.

[07:03:42] Phani Krishna - Outskill: Now, there is a certificate as well that everybody is going to get, and you get the certificate right away.

[07:03:49] Phani Krishna - Outskill: I will go ahead and share this certificate generation link on the chat at this point of time.

[07:04:00] Phani Krishna - Outskill: Give me a second to do that.

[07:04:05] Phani Krishna - Outskill: Alright, let me bring it here. There is a certificate that you will be able to generate right away, and

[07:04:14] Phani Krishna - Outskill: There you go.

[07:04:18] Phani Krishna - Outskill: you can go ahead and upload this certificate to your resume, to your LinkedIn profile, but beyond of this certificate, also, if you're putting this up on LinkedIn, I say this every time, if you're putting this up on LinkedIn.

[07:04:36] Phani Krishna - Outskill: Mention your learnings, and if you have taken notes, there's a reason why I asked you to take notes. Take a picture of your notes and attach it to the LinkedIn post that you're making. This adds credibility.

[07:04:51] Phani Krishna - Outskill: If you do not know why credibility matters, Google it. But, when you're putting a certificate, along with that, if you're putting your learnings out and the notes out, people will really believe that you have learned AI, and then start reaching out to you.

[07:05:08] Phani Krishna - Outskill: Right? So...

[07:05:10] Phani Krishna - Outskill: You have the certificate generation link. Drop in a yes if you are able to generate the certificate.

[07:05:16] Phani Krishna - Outskill: Drop in a yes if you are able to generate the certificate.

[07:05:22] Phani Krishna - Outskill: I mean, if you have not taken notes, that's okay. You can simply write what you have learned, and when you build these projects by working on the workbooks.

[07:05:32] Phani Krishna - Outskill: Take screenshots of what you're building, and put them up again. Building in...

[07:05:37] Phani Krishna - Outskill: Building in public is what this strategy is called. If you want to read up about it, you can Google it and read up about it.

[07:05:44] Phani Krishna - Outskill: Perfect.

[07:05:46] Phani Krishna - Outskill: Okay, now, now, I also want to share this opportunity with all of you, through which you can participate in a referral campaign.

[07:05:56] Phani Krishna - Outskill: If you want to go ahead and gift this mastermind to others, and also earn some points for yourself by doing so, we have a referral campaign that we do, through which we select

[07:06:08] Phani Krishna - Outskill: three top... I mean, three people who are on top of the leaderboard every month, and we also reward them to

[07:06:16] Phani Krishna - Outskill: for helping us reach a... for helping us reach to our vision of getting to 100 million plus people globally, right? Because...

[07:06:25] Phani Krishna - Outskill: while we are trying to do this through many collaborations, many partnerships, etc, people who are attending our sessions, if they become a voice for Outskill, it'll be amazing. And if you genuinely found value.

[07:06:40] Phani Krishna - Outskill: you could go ahead and refer your friends into this mastermind, your colleagues into this mastermind, your managers, your CEOs, whoever it is that you may want to refer into this mastermind, you can. And by doing so, you get points. Not just that.

[07:06:57] Phani Krishna - Outskill: As you submit your tasks, you get points. We are basically rewarding you for learning.

[07:07:04] Phani Krishna - Outskill: That is what we are trying to do over here. All that you need to do is go ahead and register into this challenge by giving your name and by giving your email address, and click on Join Challenge. Once you go ahead and click on Join Challenge, you will be able to see your unique referral link.

[07:07:23] Phani Krishna - Outskill: This is the link that you need to share.

[07:07:26] Phani Krishna - Outskill: on WhatsApp groups, on... Your official groups, wherever it is.

[07:07:32] Phani Krishna - Outskill: you know, where you think people would find interest in attending this or, you know, registering for this, you can go ahead and share this unique link of yours with them, so that the points get calculated accordingly. And as you scroll down, there are also these tasks that we would want you to do.

[07:07:49] Phani Krishna - Outskill: Based on the workbooks that we have given you, right? One is building a web application with Claude. When you do this task and submit your web application to us, we are going to be giving you 50 points.

[07:08:01] Phani Krishna - Outskill: Likewise, you build a website for yourself.

[07:08:04] Phani Krishna - Outskill: You get 50 points as well.

[07:08:07] Phani Krishna - Outskill: you generate your first AI image, you get 50 points for that. So you're learning, submitting your tasks to accumulate points.

[07:08:15] Phani Krishna - Outskill: Love it.

[07:08:19] Phani Krishna - Outskill: Yes?

[07:08:21] Phani Krishna - Outskill: People who are saying, I have not received the certificate generation link, it's right here on the chat.

[07:08:26] Phani Krishna - Outskill: I'll drop it in once again.

[07:08:29] Phani Krishna - Outskill: Why is this not getting pasted? Okay, give me a second.

[07:08:36] Phani Krishna - Outskill: There you go.

[07:08:38] Phani Krishna - Outskill: People who are saying, you could not find it, I'll drop it in multiple times.

[07:08:44] Phani Krishna - Outskill: You should be able to find the certificate generation link right now.

[07:08:47] Phani Krishna - Outskill: Yup?

[07:08:48] Phani Krishna - Outskill: Perfect. And this is how you join the referral campaign as well. There is also one more bonus that I would like to share with everyone, and this is something that a lot of people asked us for, so I'll quickly clarify this, and then I will speak about the roadmap as well.

[07:09:06] Phani Krishna - Outskill: Lot of questions around the roadmap. I'm just going to go ahead, pause the chat for a bit.

[07:09:17] Phani Krishna - Outskill: Lovable is also acceptable, right? They've... the idea for us is to help you learn, nothing else.

[07:09:25] Phani Krishna - Outskill: And we realized that just by giving the workbooks, people are not going ahead and applying it, and that is the reason why we try to gamify it, and we are also telling you that we will reward you.

[07:09:36] Phani Krishna - Outskill: for literally learning and helping others learn as well. And all of those details can be found on the referral campaign page. But what is bonus number 3? Well, when we spoke about the accelerator program, something that many people reached out to us with

[07:09:52] Phani Krishna - Outskill: Is regarding our fellowship programs as well, and we did not speak about the fellowship programs for a particular reason.

[07:10:01] Phani Krishna - Outskill: what am I really talking about? Those of you who had this question, I'm sure you have gone to our website, and I'm sure you have gone ahead and checked out the fellowships section that we have on our website, right?

[07:10:13] Phani Krishna - Outskill: Yes.

[07:10:15] Phani Krishna - Outskill: Apart from the accelerator program, we also have a longer version.

[07:10:20] Phani Krishna - Outskill: of the program, where we help you learn from Level 1 to level 5 over 6 months.

[07:10:27] Phani Krishna - Outskill: So, anybody who cannot learn

[07:10:30] Phani Krishna - Outskill: through the accelerator program, because spending 14 continuous days is difficult for you, you could give it an attempt to join the fellowship program. However, the approach that we take in the fellowship programs is slightly different. There is, of course, a non-technical track.

[07:10:46] Phani Krishna - Outskill: And a technical track as well, but the fellowship programs of ours are built primarily for entrepreneurs, consultants.

[07:10:56] Phani Krishna - Outskill: Working professionals who want to become entrepreneurs or consultants, right?

[07:11:01] Phani Krishna - Outskill: These fellowship programs that we have are our flagship fellowship programs, wherein we select few limited people every month.

[07:11:10] Phani Krishna - Outskill: And we spend 6 months mentoring them.

[07:11:15] Phani Krishna - Outskill: In the accelerator program, we teach you, and we make you implement fast.

[07:11:20] Phani Krishna - Outskill: In the fellowship program, we do the same.

[07:11:24] Phani Krishna - Outskill: With probably 10 times more touchpoints with you, and we help you craft your business direction.

[07:11:32] Phani Krishna - Outskill: We help you craft that journey for you of becoming a consultant, or an entrepreneur, or a solopreneur from being a working professional as of today. And if you are an entrepreneur who's working on an idea currently, we help you

[07:11:47] Phani Krishna - Outskill: work on that particular idea with AI, and also figure out the JTM. Now, this requires extremely high amounts of touchpoints, which we provide in the fellowship programs, and that is the reason why these programs happen over a period of 6 months. So, every month.

[07:12:06] Phani Krishna - Outskill: Or it takes 4 weeks to go deep into one level in the fellowship program, whereas in the accelerator, it takes 2 days to go deep into one level.

[07:12:16] Phani Krishna - Outskill: to give you, you know, a gist. And that does not mean that in the accelerator we don't teach everything that we teach in the fellowship program. The support is sort of different in the fellowship program versus the accelerator program, right? So that is the primary difference, not the content or not the end outputs.

[07:12:35] Phani Krishna - Outskill: And also, the second difference is that the fellowship program sessions are also live, but they happen only during the weekends on Saturdays and Sundays.

[07:12:44] Phani Krishna - Outskill: The third difference is that we do not let people pay and join the fellowship program.

[07:12:50] Phani Krishna - Outskill: So, even if you are somebody who has paid and joined the Accelerator program by

[07:12:56] Phani Krishna - Outskill: Availing the discounted price that we spoke about this time. If you want to move yourself in the fellowship program, you still will have to take something called as a one-on-one interview that we conduct for everybody who wants to apply to the fellowship programs.

[07:13:11] Phani Krishna - Outskill: Now, when you try to do this from the website, right, of course, our fellowship programs are priced

[07:13:17] Phani Krishna - Outskill: Close to \$10,000.

[07:13:20] Phani Krishna - Outskill: In INR, it is close to 6 lakh rupees, but people who usually get selected, we give them other scholarships to bring the price down to close to 2 to 3 lakh rupees, right? It's a 6 plus 6 month long program.

[07:13:35] Phani Krishna - Outskill: costlier than the accelerator program because of the mentorship that you get, but in terms of the ROI, if you look at it, again, that is why it is built for only a specific set of people. The ROI that people get from this kind of mentorship today is extremely high.

[07:13:51] Phani Krishna - Outskill: And that is why we don't just let people pay up for this program directly, we conduct an interview. And that is why when you go ahead and try to apply to this program from the website, you will see that you are getting directed to a payment link that is asking you to pay for an interview

[07:14:08] Phani Krishna - Outskill: And...

[07:14:09] Phani Krishna - Outskill: We charge about 5,000 rupees for a one-on-one 45-minute interview. That is usually non-refundable. However, for all of you.

[07:14:19] Phani Krishna - Outskill: I came up with a bonus, primarily because of the number of queries that we received from people, right?

[07:14:26] Phani Krishna - Outskill: around the fellowship programs, and this bonus applies to all the people who probably enrolled already into the accelerator program as well, and want to probably move to the fellowship program. The bonus applies to you as well, and that bonus is basically the fact that we are waiving off

[07:14:44] Phani Krishna - Outskill: The 5,000 rupee interview booking amount, and we are making the interview free for the first 100 people who block an interview slot.

[07:14:53] Phani Krishna - Outskill: Do you think that is helpful? It's basically to give you an opportunity, if you are serious.

[07:15:00] Phani Krishna - Outskill: an opportunity to talk to people. AI researchers, by the way. All of our team members who have gone deep into AI over the last two and a half years are the ones that you will be meeting in this call if you're booking a call at this point of time.

[07:15:15] Phani Krishna - Outskill: We wanted to give you that guidance as well, just because of the number of queries that came in around the fellowship programs as well. But of course, we can't take these interviews for everyone, hence we had to cap it to the first 100 people who avail this opportunity to block your interview for free.

[07:15:32] Phani Krishna - Outskill: If you have joined the Accelerator program already, and you might want to move to the fellowship program, you can also claim your free interview booking right now, and then if you are selected in the interview, then our team will allow you to move your enrollment into the fellowship program as well. Now, the selection criteria for the fellowship program is basically not your age or your background.

[07:15:55] Phani Krishna - Outskill: But the idea that you're working on, what is it that you're building? Will we be able to help you in that journey?

[07:16:01] Phani Krishna - Outskill: And... Will our help really

[07:16:05] Phani Krishna - Outskill: make sense for you. These are the discussions that we're going to be having in the one-on-one interview call that we would be having.

[07:16:12] Phani Krishna - Outskill: having, right?

[07:16:14] Phani Krishna - Outskill: And this also makes sense for all the senior leaders, probably, in case you are a lot of people who are trying to transform their companies

[07:16:22] Phani Krishna - Outskill: current processes into AI-driven processes usually also join our fellowship program, because in the fellowship program, over a period of one entire year, they keep asking us and taking our support in terms of moving their current

[07:16:36] Phani Krishna - Outskill: strategies or processes to AI-driven processes, and when you're doing something like that, having the support and mentorship

[07:16:43] Phani Krishna - Outskill: Sometimes helps, so if you're falling into that category, you might want to go ahead and block a 1v1 interview as well.

[07:16:50] Phani Krishna - Outskill: Right? With all this being said.

[07:16:53] Phani Krishna - Outskill: I hope the bonuses have been helpful for everyone, but right now, I will again go into the

[07:17:03] Phani Krishna - Outskill: Google Drive folder, Give me a second.

[07:17:06] Phani Krishna - Outskill: Where is the roadmap here? Let me refresh this.

[07:17:09] Phani Krishna - Outskill: Wait, yes, there you go.

[07:17:12] Phani Krishna - Outskill: Now, inside the Google Drive folder, and I'll share this link once again on the chat.

[07:17:22] Phani Krishna - Outskill: Here are all the resources.

[07:17:26] Phani Krishna - Outskill: There you go.

[07:17:28] Phani Krishna - Outskill: And people who are asking on the chat for my social media links to connect with me, I will share that as well. I see a lot of interview bookings coming in at this point of time.

[07:17:40] Phani Krishna - Outskill: And Mahesh is also asking whether I can share the AI Accelerator program's payment link. The enrollments are closed for it. We have the last one or two seats remaining.

[07:17:51] Phani Krishna - Outskill: So if you want to go ahead and block your seat for the accelerator program, I'll drop that link as well on the chat. But all the links are there. Give me a thumbs up if you can see all of the links.

[07:18:05] Phani Krishna - Outskill: Yes, And yes, I'll drop the certificate generation link as well.

[07:18:17] Phani Krishna - Outskill: There you go.

[07:18:21] Phani Krishna - Outskill: All the links are there, right? Now, as all of you block your seat, either in the accelerator program, or block your one-on-one interview, or you go ahead and generate your certificate and everything around it.

[07:18:34] Phani Krishna - Outskill: When you go into the roadmap.

[07:18:36] Phani Krishna - Outskill: folder, you will be able to find the latest roadmap that we have gone ahead and released, and I'm closing the reactions at this point of time so that you have focus on what I'm sharing.

[07:18:48] Phani Krishna - Outskill: Now, this roadmap is supposed to be a guide for all the people that

[07:18:53] Phani Krishna - Outskill: probably we are not able to support Beyond of this mastermind, right? It's going to be a guide that'll help you with a lot of resources. You can see that this is a 46-page document. As you scroll down.

[07:19:06] Phani Krishna - Outskill: If you see this error, all that you need to do is refresh.

[07:19:11] Phani Krishna - Outskill: It's an internet issue, basically.

[07:19:13] Phani Krishna - Outskill: But it should load up.

[07:19:15] Phani Krishna - Outskill: There you go.

[07:19:18] Phani Krishna - Outskill: Right?

[07:19:19] Phani Krishna - Outskill: Inside this roadmap, you will find the same 5 different levels.

[07:19:25] Phani Krishna - Outskill: We spoke about 5 different levels. Our idea with this roadmap is to help you go deep into these levels. So, what we have done is, all of the resources that helped us learn and go deep into these levels, we have gone ahead and curated them level-wise for you.

[07:19:41] Phani Krishna - Outskill: So, when you go into Level 1,

[07:19:44] Phani Krishna - Outskill: We have described what is it that you should be focusing on in Level 1,

[07:19:48] Phani Krishna - Outskill: And we have also gone ahead and given you resources for Level 1 specifically.

[07:19:54] Phani Krishna - Outskill: Level 1, like we said, is all about prompt engineering. It's about understanding which AI models to use, where it's about understanding how local AI models can be used

[07:20:05] Phani Krishna - Outskill: All of that, you know, when Weber was showing LM Studio yesterday, many of the questions that people asked were, you know, why aren't you helping us install this?

[07:20:15] Phani Krishna - Outskill: And we told you that we'll provide you a documentation that'll help you install it on your own.

[07:20:20] Phani Krishna - Outskill: We have gone ahead and given that here, right? LLM stats, knowing which LLM to use where.

[07:20:27] Phani Krishna - Outskill: There's also a research paper, Attention is All You Need. It's by researchers of Google.

[07:20:35] Phani Krishna - Outskill: When you open this particular link, you just have to copy this link.

[07:20:40] Phani Krishna - Outskill: go into a new tab and open it up. You will be able to find the exact research paper that was launched by people from Google. It's called Attention is All You Need. We spoke about the five steps, right? Tokenization, embedding, self-attention or transformer mechanism, prediction and response generation.

[07:20:58] Phani Krishna - Outskill: If you want to go deeper into the architecture of AI models, you should absolutely read this paper. It'll make a lot of things clear for you in terms of how do AI models generate responses.

[07:21:10] Phani Krishna - Outskill: How can you reduce hallucinations and everything around it? Likewise, the roadmap has a lot of other documentation as well, for every level. If you want to learn about MCPs.

[07:21:23] Phani Krishna - Outskill: You look at the resources, you have the official documentations right here that you can learn from. Do you think this is helpful?

[07:21:32] Phani Krishna - Outskill: Drop in helpful on the chat if you think this is helpful.

[07:21:38] Phani Krishna - Outskill: You can't go to anybody from today and tell them that you did not know where to learn AI from, or how to go deep into AI. We are literally giving you everything.

[07:21:48] Phani Krishna - Outskill: Since you have completed the mastermind, right? Now it's a matter of time for you.

[07:21:53] Phani Krishna - Outskill: And it's not just the resources for every level. As you scroll up, you will also be able to find

[07:22:01] Phani Krishna - Outskill: this section on what is the AI landscape looking like as of May 2026,

[07:22:08] Phani Krishna - Outskill: What are the new models that got launched? Opus 4.8 that got launched on the 28th of May.

[07:22:14] Phani Krishna - Outskill: That is the reason why we build out a roadmap every month, and we often send it to our internal community members, right? So, all of the people who have joined the Accelerator program, all the people who would get to join the fellowship programs and everything.

[07:22:29] Phani Krishna - Outskill: You would be receiving a roadmap like this every 30 days from us, so that you always are keeping yourself updated.

[07:22:36] Phani Krishna - Outskill: Key model launches that happened in the last two months, and why they matter the most.

[07:22:41] Phani Krishna - Outskill: Lot of you had this question around which AI model to use where. We have gone ahead and

[07:22:47] Phani Krishna - Outskill: given you a table that helps you understand which model to use for what kind of use cases as well. The jobs-to-be-done framework, what kind of job are you doing, what should be the primary model picked for that particular job?

[07:23:00] Phani Krishna - Outskill: And Google I.O. recently happened, and a lot of announcements came up from Google's side as well. These are announcements that people don't have access to yet. For example, Gemini Spark.

[07:23:13] Phani Krishna - Outskill: Not many people have gotten access to it, right? But what it is, how it is going to be helpful for you, all of that has been put out right here.

[07:23:23] Phani Krishna - Outskill: So, go through this document in detail.

[07:23:26] Phani Krishna - Outskill: This will help you

[07:23:28] Phani Krishna - Outskill: go deeper with all the context that you have gained from the mastermind itself. And along with this, there is a bonus, which is the GenAI Money Playbook. Everything that you learned in this mastermind

[07:23:42] Phani Krishna - Outskill: Right from writing great prompts.

[07:23:45] Phani Krishna - Outskill: to building custom GPTs.

[07:23:47] Phani Krishna - Outskill: to building AI agents.

[07:23:49] Phani Krishna - Outskill: to using Claude in a great way.

[07:23:53] Phani Krishna - Outskill: to building wipe-coated products.

[07:23:55] Phani Krishna - Outskill: to image and video generation. All of these individually are skills that you can make money off.

[07:24:03] Phani Krishna - Outskill: How can you go ahead and make money off these skills is what we have tried to capture in this particular document, right? Eight ways to get paid for what you just learned.

[07:24:14] Phani Krishna - Outskill: You can become a freelance AI specialist. You can productize AI services.

[07:24:20] Phani Krishna - Outskill: You can become an AI creator and build your own personal brand.

[07:24:24] Phani Krishna - Outskill: You can wipe code micro-SaaS platforms.

[07:24:28] Phani Krishna - Outskill: You can monetize custom GPTs and Gemini Gems.

[07:24:32] Phani Krishna - Outskill: You can monetize AI content creation and video production.

[07:24:36] Phani Krishna - Outskill: And we have also gone ahead and given you the bands that people are actually charging in the market for these services at this point of time.

[07:24:46] Phani Krishna - Outskill: I, myself, am into consulting.

[07:24:48] Phani Krishna - Outskill: So you can imagine, right, the kind of money that you can make as of today.

[07:24:53] Phani Krishna - Outskill: the 8 paths, there are multiple zones that you can make money in when you are going deep into AI, and all of those paths have been put in right here, described as well, so that you get the complete roadmap.

[07:25:09] Phani Krishna - Outskill: I built this document out, and I've gone ahead and given you the exact roadmap.

[07:25:15] Phani Krishna - Outskill: In terms of, let's say you're doing AI-powered LinkedIn ghostwriting, how many posts should you be writing?

[07:25:21] Phani Krishna - Outskill: All of those details also have been put in inside this particular document. Again, not so that you take this document as a...

[07:25:31] Phani Krishna - Outskill: As the only source of information for you, but this can be a guiding document for you.

[07:25:36] Phani Krishna - Outskill: to get to where I would want you to get to with all of the information that you have gained, right? And...

[07:25:42] Phani Krishna - Outskill: Of course, you might say, funny, this is a large 20-page document, how am I going to read through all of this? Be smart about it. We taught you how to use LLMs in the right way. We taught you how to make LLMs

[07:25:54] Phani Krishna - Outskill: Your friends, or your interns.

[07:25:58] Phani Krishna - Outskill: use the LLMs in the right way to consume all of this content in a way that it helps you.

[07:26:05] Phani Krishna - Outskill: And I've also gone ahead and given you certain frameworks for you to write your cold emails, for you to write your LinkedIn cold DMs, for you to write your follow-up messages, and all of that for people who are extremely new to this kind of business, right?

[07:26:20] Phani Krishna - Outskill: But utilize these resources. I will share this link once again. I think this is a gold mine. Not saying it because our team has built it, but

[07:26:30] Phani Krishna - Outskill: I just know the value of what we are giving you.

[07:26:33] Phani Krishna - Outskill: And what you can get from it if used in the right way.

[07:26:37] Phani Krishna - Outskill: These are all of the things that you're walking away with.

[07:26:41] Phani Krishna - Outskill: as you complete the mastermind.

[07:26:47] Phani Krishna - Outskill: Vape?

[07:26:48] Phani Krishna - Outskill: I think with that, we come to the end of the mastermind officially. Drop in a heart.

[07:26:56] Phani Krishna - Outskill: If you want to spread love to everyone who is on the call at this point of time.

[07:27:01] Phani Krishna - Outskill: But I'm just taking a quick look at the questions before we wrap up.

[07:27:05] Phani Krishna - Outskill: There's no date on the certificate, Anup. We will be sending another certificate over email as well that'll have the date on it.

[07:27:15] Phani Krishna - Outskill: The Prajvila, the movie teaser that we generated, we will be sharing that as well, don't worry about it.

[07:27:23] Phani Krishna - Outskill: High at the rate outskill.com is our official support email ID.

[07:27:30] Phani Krishna - Outskill: people who are asking for my specific links, once again, I will share that.

[07:27:41] Phani Krishna - Outskill: And people who are mentioning that you're not able to join the Accelerator program, not the fellowship program, and are being apologetic about it, you don't have to at all, right?

[07:27:51] Phani Krishna - Outskill: We just want everybody to continue learning. We want everybody to understand the importance of becoming a continuous learner in today's world. As long as you continue to learn, we will be happy for you, and we will only wish the best for you.

[07:28:07] Phani Krishna - Outskill: The recordings, like I mentioned once, will come to you in the next 24 to 48 hours, along with the certificate as well, over email in the next 24 to 48 hours.

[07:28:20] Phani Krishna - Outskill: I might have missed a lot of questions here and there, because of how fast the whole chat is moving, but any specific questions that you might have for me, you can go ahead and write to me, and I'll help you out with it. But thank you so much for attending the mastermind over yesterday and today.

- [07:28:38] Phani Krishna - Outskill: If there's one thing that I wish for everybody that's absolute success.
- [07:28:42] Phani Krishna - Outskill: Thank you so much. Continue to learn, continue to build great things with AI. The world that we are living in today, and the world that we will continue to live in, is going to be very different from the world that we have lived in. So, I see a lot of young people on the call. You are...
- [07:29:00] Phani Krishna - Outskill: In a great space already, right?
- [07:29:03] Phani Krishna - Outskill: You just have to go deeper and not lose this hunger to learn that you have shown over yesterday and today. As long as you have that quality, you will win in life.
- [07:29:16] Phani Krishna - Outskill: with that, I wish to say a good... I mean, I wish to say goodbye to all of you.
- [07:29:24] Phani Krishna - Outskill: does not mean that this will be the last time that we are meeting. We will continue to meet, because at Outskill, we do a lot of other sessions as well, to just keep teaching people, and you will also get such invites going forward also. If you like any invite, feel free to join in, and
- [07:29:43] Phani Krishna - Outskill: I hope to meet you once again at some point, right? But if you ever find me anywhere,
- [07:29:50] Phani Krishna - Outskill: feel free to say a hi. I would love to see all of your posts. I would love to see the journeys that all of you take after these two days are... I mean, after... from tomorrow, essentially. But continue to learn, continue to practice, continue to build. With that being said, all the very best. Thank you, everyone. Bye.
- [07:30:11] Phani Krishna - Outskill: See you all some other day, some other time, in some other sessions.
- [07:30:14] Phani Krishna - Outskill: Thank you, everyone, and everybody who joined the Accelerator program and have booked their interviews, our team will shortly reach out to you and help you out with
- [07:30:22] Phani Krishna - Outskill: the remaining process. Thank you, everyone. Bye.
